DRAFT

Introduction and Summary

This report provides an overview of the aerospace manufacturing sector in the Wichita area, including an analysis of the industry landscape, labor market, transportation infrastructure, balance of trade, and general trends in the United States. The study aims to identify weaknesses, opportunities, and competitiveness within the aerospace industry.

The industry landscape analysis reveals the relative growth and size of the aerospace manufacturing market in comparison to other communities. While Wichita had negative employment growth, robust wage growth indicates increased competitiveness in attracting labor. Other cities like Houma, Des Moines, and Tucson showed robust employment and wage growth in the aerospace sector.

All cities analyzed saw increases in wages from 2020-2021. Labor analysis indicates reductions in employment and establishments in Wichita, while Kansas City saw increases in both. However, Wichita has the largest value of employment in the aerospace sector among the analyzed cities. The concentration of Aerospace Engineers in the WAMPO region is vital to the aerospace industry.

Productivity analysis suggests that semiconductors and other electronic components substantially grew, while aerospace products and parts experienced a net decline. Temporary negative forces affecting productivity include changes in occupational structure, loss of skilled, aging workforce, shrinking skilled labor pool, and the time required to train unskilled/moderate skilled labor.

The skills, knowledge, and abilities required for the aerospace sector primarily focus on oral comprehension, oral expression, mathematics, mechanical knowledge, critical thinking, reading comprehension, and active listening.

General trends in the U.S. aerospace sector suggest rising establishments and revenues, while wages are expected to remain stagnant. The industry faces high barriers to entry due to high capital requirements, government regulations, and proprietary technology. The threat of substitutes is low, and there is moderate bargaining power for both buyers and suppliers. Rivalry among existing firms is high.

In summary, the aerospace manufacturing sector in Wichita is competitive, with a high level of rivalry among existing firms. The industry plays a vital role in the local economy, offering employment opportunities and contributing to innovation and technology. Understanding the industry landscape, labor market, transportation infrastructure, balance of trade, and general trends is crucial for identifying weaknesses and leveraging growth opportunities within the aerospace sector.

Industry Landscape

The following NAICS codes, provided by the Greater Wichita Partnership, constitute the category of aerospace. These codes were used to extract specific industry data related to these subsections.

Aerospace		
NAICS	Description	Subsector
334220	Radio and Television Broadcasting and Wireless Communications Equipment Manufacturing	
334417	Electronic Connector Manufacturing	
334419	Other Electronic Component Manufacturing	
334511	Search, Detection, Navigation, Guidance, Aeronautical, and Nautical System and Instrument Manufacturing	
334515	Instrument Manufacturing for Measuring and Testing Electricity and Electrical Signals	
334519	Other Measuring and Controlling Device Manufacturing	
336413	Other Aircraft Parts and Auxiliary Equipment Manufacturing	
541330	Engineering Services	
541380	Testing Laboratories	
336411	**Aircraft Manufacturing**	**MRO**
336412	**Aircraft Engine and Engine Parts Manufacturing**	**MRO**
488190	**Other Support Activities for Air Transportation**	**MRO**
811310	**Commercial and Industrial Machinery and Equipment (except Automotive and Electronic) Repair and Maintenance**	**MRO**

In order to give perspective to the climate of this key sector, a list of other communities with strong aerospace manufacturing sectors has been identified using their location quotients. Additionally, other Midwestern cities have been included for consistent comparison to convey where Wichita has growth opportunities.

Key Aerospace Communities
Des Moines- West Des Moines, IA MSA
Hot Springs, AR MSA
Houma-Thibodaux, LA MSA
Kansas City, KS-MO MSA
Oklahoma City, OK MSA
Omaha- Council Bluff, NE-IA MSA
State College, PA MSA
Tucson , AZ MSA
Tulsa, OK MSA
Wichita Falls, TX MSA
Wichita, KS MSA

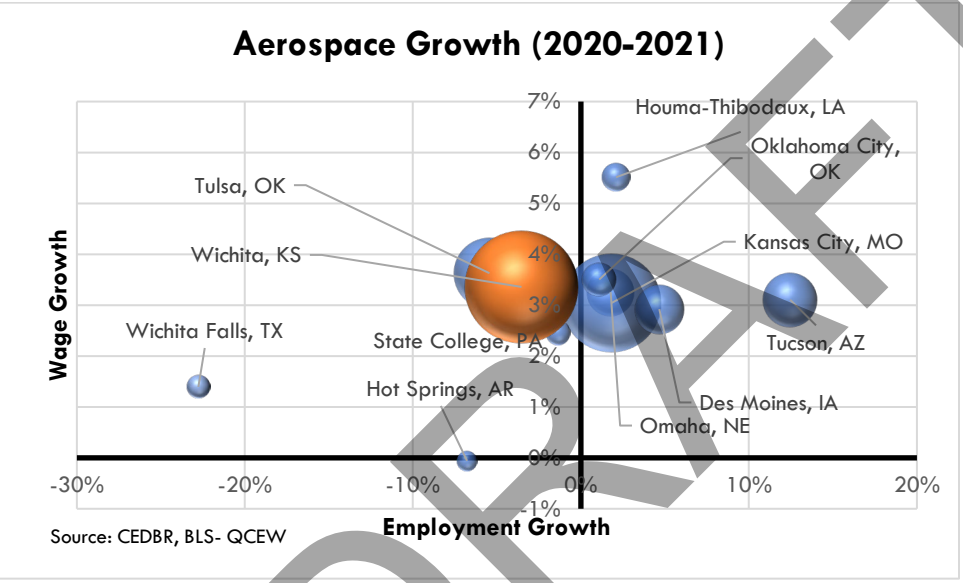
The comparison cities were selected based on the following criteria: employment concentration, size of the town, and preference for Midwest. Furthermore, all of the communities were vetted with the Greater Wichita Partnership as communities that the Wichita area competes within the respective sector.

In order to capture the broad industry landscape and recent competitiveness of the aerospace manufacturing sector within the Wichita area, this study developed a growth matrix. The matrix captures the relative growth and size of the market compared to the selected comparable communities. Any city within the top right quadrant should be considered in a growth mode. Those in

DRAFT

the bottom left quadrant are in declining sectors. The other two quadrants, bottom right and top left, identify economic weaknesses that must be addressed.

Of the cities being compared in the aerospace manufacturing sector, Houma, Des Moines, and Tucson had the most robust employment along with a high wage growth and employment growth relative to the other locations. Unfortunately, Wichita had negative employment growth. The good news, however, is that the robust wage growth signals that the industry is ramping up to be more competitive in attracting labor. Most of the other markets were also increasing wages at or near the same rate as Wichita, making the overall labor market tight.



Labor

Wichita saw reductions in both wages and establishments from 2020 to 2021. Due to the proximity to the WAMPO region, both the Kansas City and Tulsa areas are considered frequent competitors in the aerospace labor market. Both locations saw increases in wages and establishments in 2021. However, Wichita did have the largest value of employment in the aerospace sector of the cities analyzed.

Souce: CEDBR, BLS - QCEW

DRAFT

Wages and location quotients were gathered for each occupation for the Wichita MSA. While each occupation had an above-average location quotient compared to the rest of the United States, the WAMPO region's high concentration of Aerospace Engineers is one of the main components of its aerospace industry.

Key Occupations

Occupation	Wichita MSA Employment	US Employment
Welders, Cutters, Solderers, and Brazers	1,480	20,870
Aerospace Engineers	1,690	40,600
Mechanical Engineers	730	26,940
Aircraft Structure, Surfaces, Rigging, and Systems Assemblers	5,340	372,400
Machinists	1,560	67,460

Source: CEDBR: BLS, OES

A location quotient is a statistical measure used to compare the concentration or specialization of a particular industry or occupation in a specific geographic area relative to its concentration in a larger reference area, typically a region or a nation. It is calculated by dividing the proportion of employment in a specific industry or occupation in the target area by the proportion of employment in the same industry or occupation in the reference area, and then comparing the result to a value of one. A location quotient greater than 1 indicates a higher concentration of the industry or occupation in the target area compared to the reference area, suggesting specialization or a comparative advantage in that particular sector. Conversely, a location quotient of less than 1 indicates a lower concentration, less specialization in the industry or occupation in the target area.

2021 Labor Costs - Aerospace

Occupation (SOC code)	Mean Wage	10th Percentile Wage	90th Percentile Wage	Location Quotient
Aerospace Engineers(172011)				13.73
Mechanical Engineers(172141)	$85,420	$56,830	$128,230	1.31
Aircraft Structure, Surfaces, Rigging, and Systems Assemblers(512011)				82.96
Machinists(514041)	$47,700	$31,190	$66,850	2.46
Welders, Cutters, Solderers, and Brazers(514121)	$50,530	$37,020	$66,020	1.81

Source: CEDBR, BLS-OES

Productivity is an important component of the labor discussion. Using national figures, the following list of occupations has been detailed for the aerospace manufacturing sector, where productivity is compared against the base year 2012. Those sectors with increasing productivity, as represented by rates above 100, are growing and have the opportunity for increased wages and profitability.

Of the four subsectors within aerospace, the only one with substantial growth was semiconductors and other electronic components, which has grown by more than 31 percent since 2012. Unfortunately, aerospace products and parts had a net decline despite the growth from 2013 through 2017. The decreasing productivity rates are likely due to structural and exogenous factors. The following are some of those temporary negative forces:

- Changes in the structure of occupations
- Loss of skilled aging workforce
- Shrinking skilled -labor pool
- Length of time to train unskilled/moderate skilled labor

Aerospace Productivity

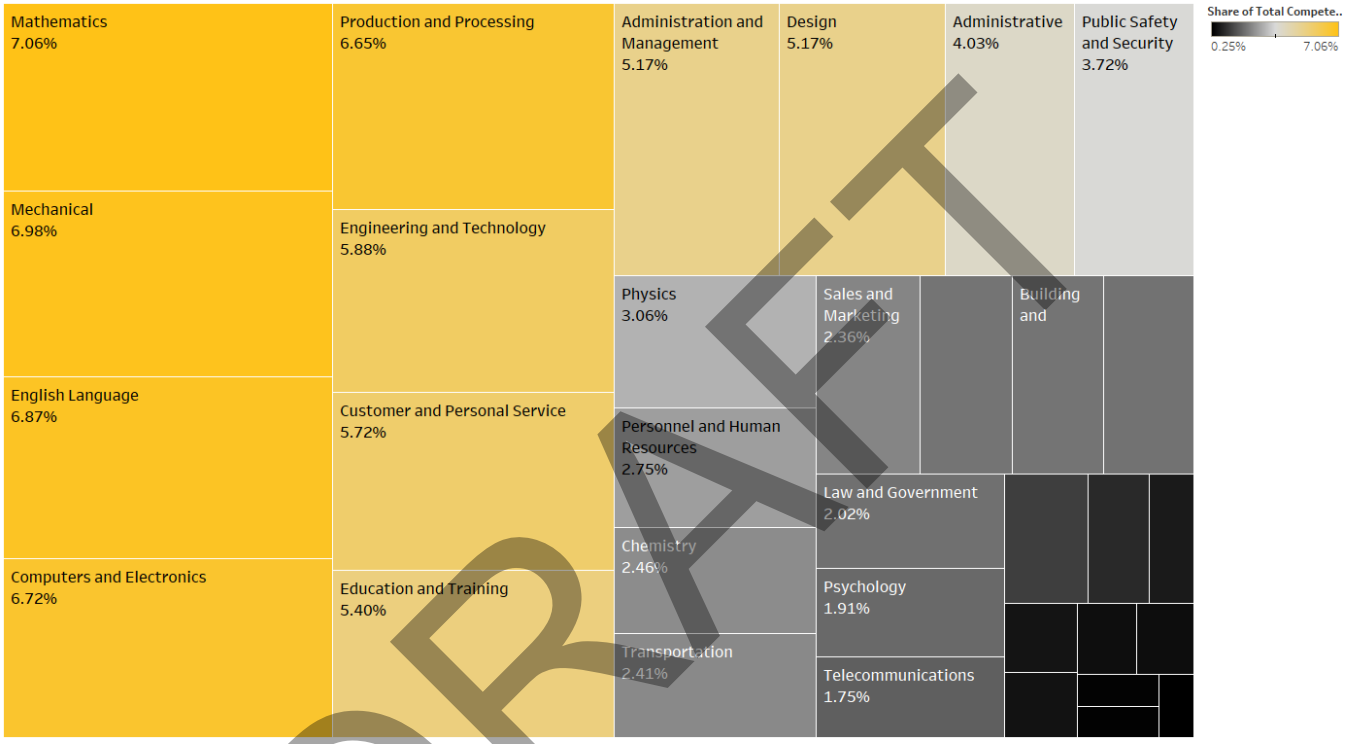
Industry	2010	2011	2012	2013	2014	2015	2016	2017	2018	2019	2020	2021
Semiconductors and other electronic components	118.3	133.8	100.0	96.6	101.0	103.7	99.2	111.5	115.6	113.9	115.7	131.1
Electronic instruments	89.5	92.7	100.0	98.2	96.7	92.1	92.4	95.8	96.8	92.5	93.6	93.4
Aerospace products and parts	95.5	93.3	100.0	105.0	111.9	113.2	103.6	111.0	106.3	91.7	82.0	81.3
Engineering services	101.1	104.4	100.0	96.4	98.8	98.8	98.6	98.3	98.5	99.1	99.1	99.7

Note: ** Data for some sectors only available at 4-digit level

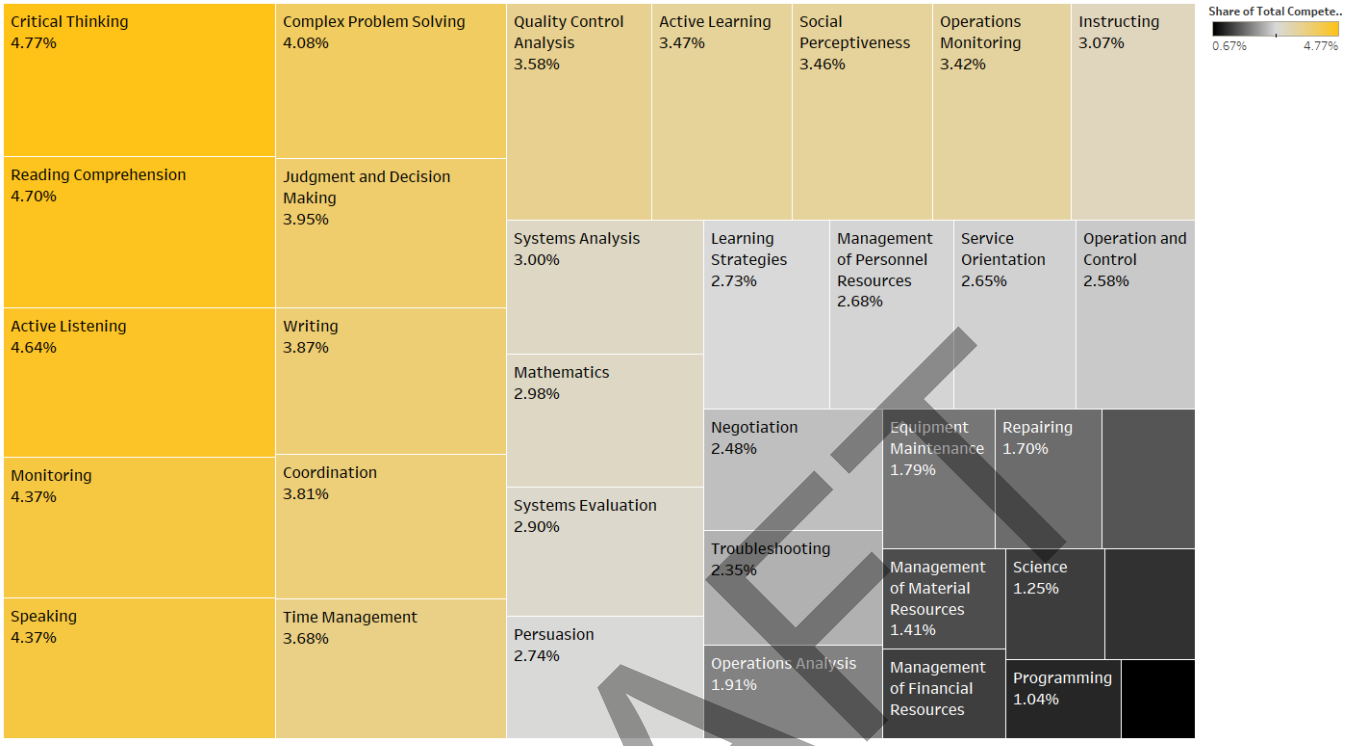
Source: CEDBR, BLS

DRAFT

Another component of the labor discussion is the skills, knowledge, and abilities required for the sector of the workforce. In the aerospace sector, the most important skills were oral comprehension and oral expression. The most important knowledge component was mathematics and mechanical, which strongly overlaps with the advanced manufacturing industry. Finally, the most essential abilities were critical thinking, reading comprehension, and active listening, which all also overlap with the advanced manufacturing sector.



DRAFT



To summarize the labor conversation through the framework of this particular sector, it is essential to consider where the employers are located. Therefore, a list of all organizations within this sector with 100 employees or more has been collected. With knowledge of these particular businesses' locations and workforce density, WAMPO can leverage this list to analyze what thoroughfares can be strengthened to propagate the industry.

DRAFT

Main WAMPO Thoroughfares

Using the list of major firms in the WAMPO region, the demand on the transportation system can be evaluated through three parameters; inbound goods, outbound goods, and labor movement. When evaluating the largest firm, Spirit Aerosystems, their transportation demand mostly relies on heavy highway traffic along with rail for both inbound and outbound goods. The main labor access points are either via the Kansas Turnpike, Oliver, or K-15.

DRAFT

Cessna Aircraft has one location in East Wichita along with another in West Wichita. Both of these locations will utilize heavy highway and air for inbound and outbound goods. The labor access for the West location is from Hoover via Southwest Blvd. Meanwhile, the labor access for the East location is along Woodlawn Blvd or Pawnee St via the Kansas Turnpike.

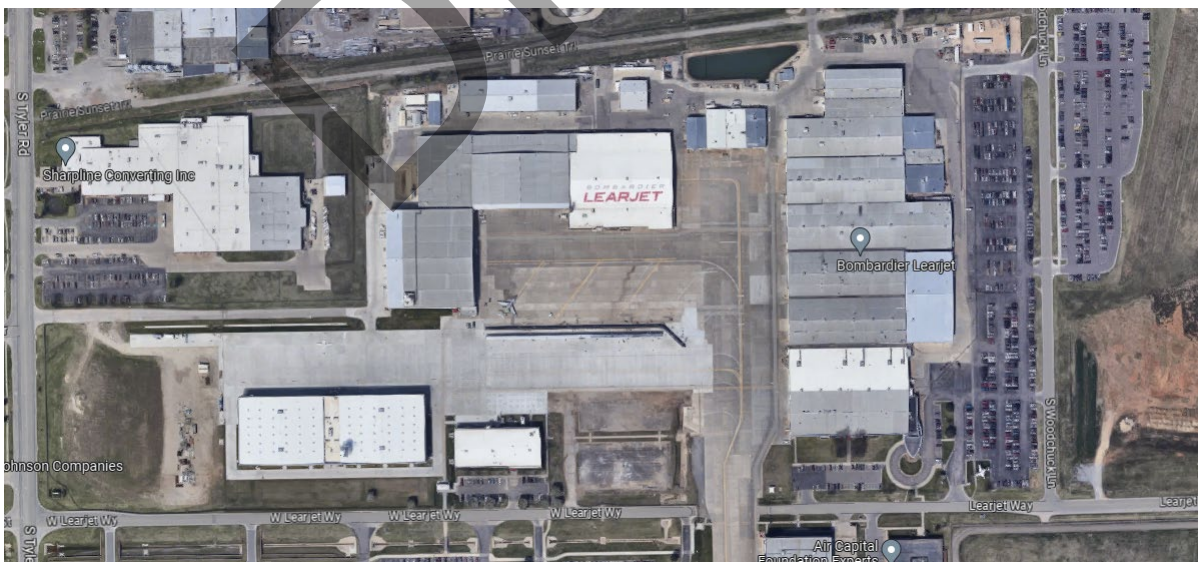
DRAFT

Bombardier Learjet relies on heavy highway and air for both inbound and outbound goods,and has the unique transportation feature of a runway bridge over a road. This is an important component to consider when discussing the transportation system, as Wichita is one of the few regions in the country where these bridges are such an integral part of the infrastructure. The main access for the labor is either along Eisnhower AP Pkwy or Tyler Rd.



DRAFT

Balance of Trade

Reviewing the data for aerospace from 2010 to 2022, it can be seen that there was a decline of 41% in 2020, followed by an increase of 2% in 2021 and a further increase of 12% in 2022.

Aerospace has performed more strongly than total Kansas exports over the period of 2010 to 2022, with an overall increase of 12%. In contrast, total US exports had a decline of 16% in 2020, although it did experience a rise of 16% in 2021 and a further increase of 12% in 2022. Despite these increases, total exports have only seen a slight overall increase of 1% from 2010 to 2022, while aerospace has seen a much more significant increase of 55%.

Overall, it can be seen that while Kansas Aerospace exports have generally performed better than overall Kansas Exports, its performance has been more similar to Total US Exports. Nevertheless, the recent recovery in Kansas aerospace exports suggests a positive outlook for the industry, which may bode well for the economy of the Wichita area.

Imports - Aerospace

Subsector	2018	2019	2020	2021	2022
3342 Communications Equipment	$383,154,016	$470,783,656	$426,897,612	$378,361,253	$460,548,482

DRAFT

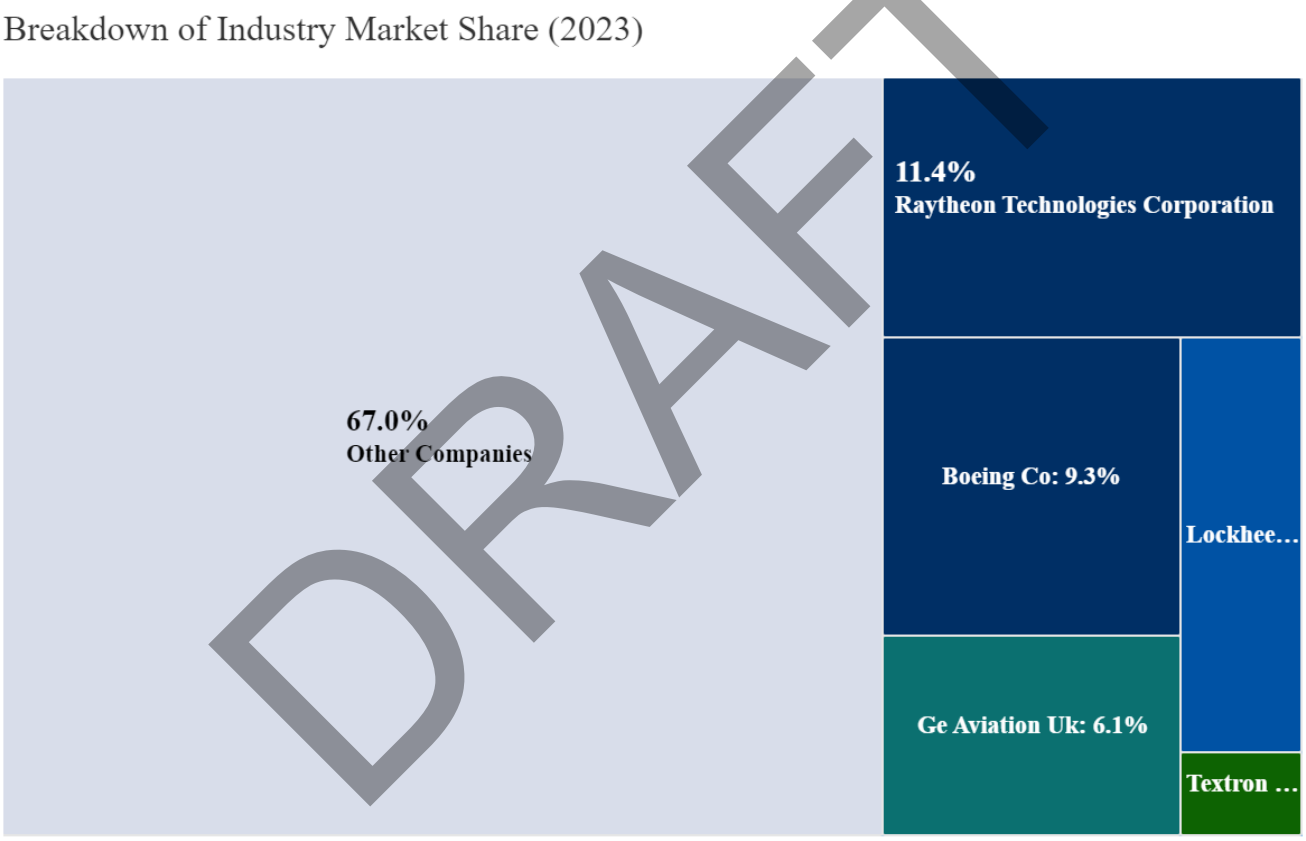
General US Trends

To assess the potential growth of the areospace manufacturing sector, this study examined five economic forces at the national level. Those broad economic conditions were then applied to the regional market, firms, and trends to provide the context of its economic competitiveness.

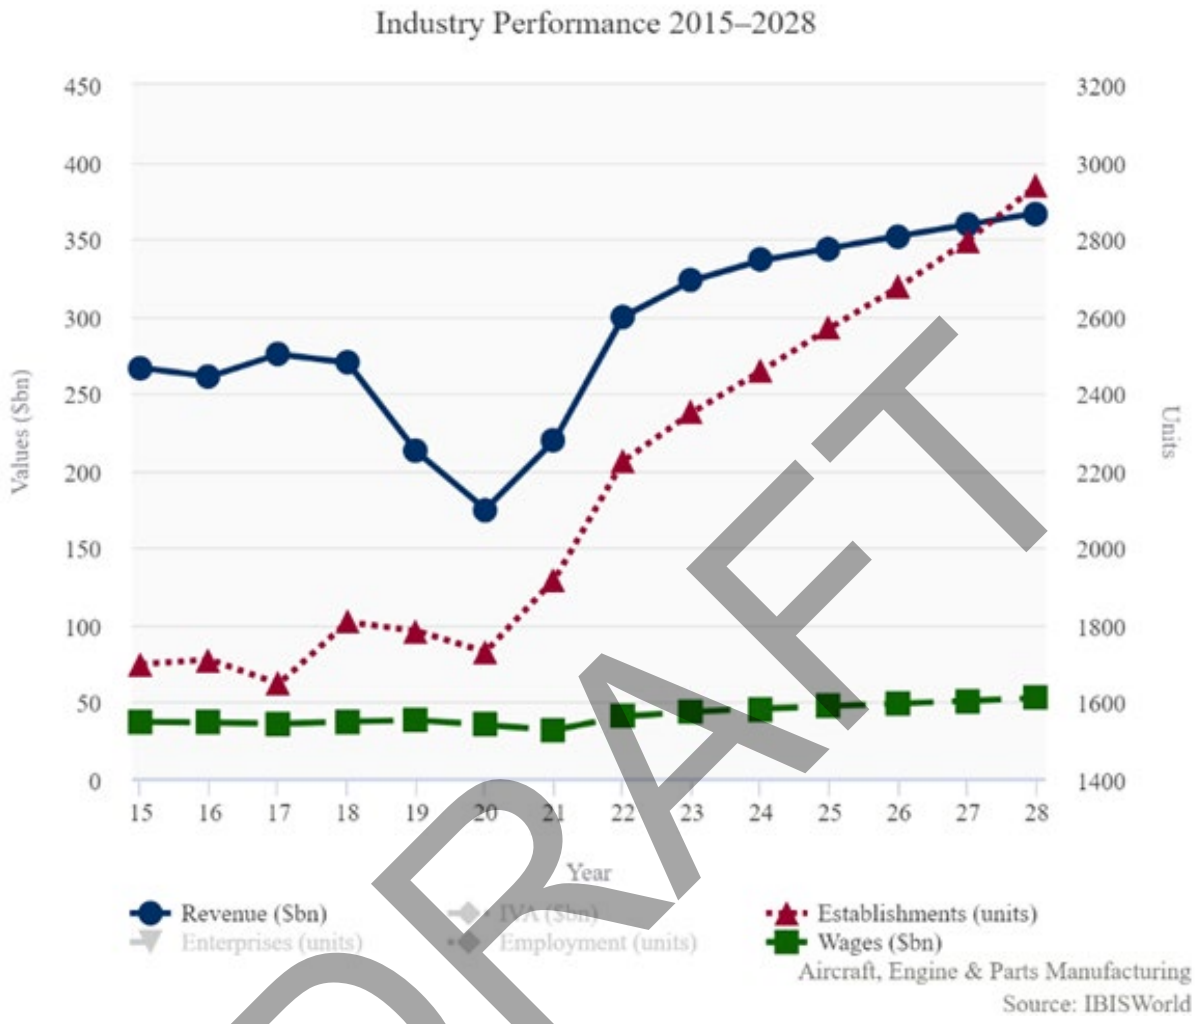
The competitive landscape in the US aerospace sector remains high, as no single firm controls a majority of the industry. Conversely, the company with the most significant proportion of the sector is Raytheon Technologies Corporation, at 11.4%. Only two other organizations control about a 5% proportion of the industry.



Source: IBISWorld, Aircraft, Engine & Parts Manufacturing

DRAFT

When reviewing trends for the sector as a whole, both establishments and revenues are projected to rise. Wages, on the other hand, are expected to remain stagnant.



DRAFT

Threat of new entrants

- High capital requirements: The aerospace industry is capital-intensive, requiring large investments in research and development, manufacturing, and marketing. For example, the cost of developing a new commercial aircraft can range from $10 billion to $20 billion.
- Government regulations: The aerospace industry is heavily regulated, making it difficult for new companies to comply with all the requirements. For example, the Federal Aviation Administration (FAA) regulates aircraft design, manufacture, and operation.
- Proprietary technology: The aerospace industry is characterized by proprietary technology, which gives existing companies a competitive advantage. For example, Boeing has proprietary technology in designing and manufacturing aircraft wings.

Threat of substitutes

- Low threat of substitutes: The aerospace industry is characterized by a low threat of substitutes, as there are no close substitutes for aircraft. For example, no other mode of transportation can provide the same level of speed, efficiency, and safety as an aircraft.

Bargaining power of buyers

- Moderate bargaining power of buyers: The bargaining power of buyers in the aerospace industry is moderate, as there are a limited number of major buyers, such as airlines and defense contractors. For example, Boeing is a major supplier of aircraft to airlines, and airlines have some bargaining power in negotiating prices with Boeing.

Bargaining power of suppliers

- Moderate bargaining power of suppliers: The bargaining power of suppliers in the aerospace industry is moderate, as there are a limited number of major suppliers, such as aerospace manufacturers and component suppliers. For example, Spirit AeroSystems is a major supplier of aircraft parts to Boeing, and Spirit AeroSystems has some bargaining power in negotiating prices with Boeing.

Rivalry among existing firms

- High rivalry among existing firms: The rivalry among existing firms in the aerospace industry is high, as a limited number of major companies compete for a share of the market. For example, Boeing and Airbus are the two major manufacturers of commercial aircraft, and they are constantly competing for market share.
- The aerospace industry in Wichita, Kansas, is competitive, with a high level of rivalry among existing firms. The industry is also characterized by high barriers to entry, which make it difficult for new companies to enter the market. The threat of substitutes is low, as there are no close substitutes for aircraft. As a result, the bargaining power of buyers and suppliers is moderate.

The aerospace industry is a vital part of the Wichita economy and a significant employer in the area. The industry is also a source of innovation and technology and plays an essential role in the national and global economy.

Introduction and Summary 2
Industry Landscape 3
Labor 5
Key WAMPO Thoroughfares 13
Balance of Trade 14
General US Trends 16

DRAFT

Introduction and Summary

The aim of this report is to analyze the progress of economic development in the WAMPO region selected target sectors. The Greater Wichita Partnership has identified key development sectors as part of its economic development initiatives: advanced manufacturing, aerospace, agriculture, energy, healthcare, IT systems & support, and transportation. Each sector will be outlined in this report with an investigation into its industry landscape, labor, the balance of trade, and general trends.

Advanced manufacturing within the Wichita MSA has been in a growth cycle, increasing its relative competitiveness. The three companies that dominate the advanced manufacturing sector are Coleman, Hustler Turf, and Case New Holland. The five largest subsectors are plastics, architectural metals, machine shops, coating, and agriculture machinery. Employment grew in four of the five, and productivity increased in three over six years.

The sector has a significant competitive labor advantage over its competitors, as the region has a high labor concentration in purchase agents, assemblers, machinists, and inspectors. The skills, knowledge, and abilities within this segment tend to require more education and experience than the broader manufacturing industry, as this study outlines. Therefore, the region's higher relative number of skilled laborers creates a competitive advantage over other markets.

The broader market conditions for advanced manufacturing play to Wichita's strategic advantage, as this segment has high barriers to entry, low substitutions, and lots of competition. Since the region already has strong firms with proprietary technology, those companies are expected to remain competitive. In addition, providing a healthy competitive business environment through access to qualified-skilled labor, a relatively competitive tax environment, and adequate heavy highway infrastructure increases the profitability of this sector.

Industry Landscape

The following NAICS codes, provided by the Greater Wichita Partnership, constitute the advanced manufacturing category. These codes were used to extract specific industry data related to these subsections.

Advanced Manufacturing and Materials		
NAICS	Description	Subsector
3321	Forging and Stamping	Machinery & Manufacturing
3322	Cutlery and Handtool Manufacturing	Machinery & Manufacturing
3323	Architectural and Structural Metals Manufacturing	Machinery & Manufacturing
3324	Boiler, Tank, and Shipping Container Manufacturing	Machinery & Manufacturing
3327	Machine Shops; Turned Product; and Screw, Nut, and Bolt Manufacturing	Machinery & Manufacturing
3328	Coating, Engraving, Heat Treating, and Allied Activities	Machinery & Manufacturing
3329	Other Fabricated Metal Product Manufacturing	Machinery & Manufacturing
3331	Agriculture, Construction, and Mining Machinery Manufacturing	Machinery & Manufacturing
3332	Industrial Machinery Manufacturing	Machinery & Manufacturing
3333	Commercial and Service Industry Machinery Manufacturing	Machinery & Manufacturing
3334	Ventilation, Heating, Air-Conditioning, and Commercial Refrigeration Equipment Manufacturing	Machinery & Manufacturing
3335	Metalworking Machinery Manufacturing	Machinery & Manufacturing
3336	Engine, Turbine, and Power Transmission Equipment Manufacturing	Machinery & Manufacturing
3339	Other General Purpose Machinery Manufacturing	Machinery & Manufacturing
3362	Motor Vehicle Body and Trailer Manufacturing	Machinery & Manufacturing
3363	Motor Vehicle Parts Manufacturing	Machinery & Manufacturing
3391	Medical Equipment and Supplies Manufacturing	Machinery & Manufacturing
3399	Other Miscellaneous Manufacturing	Machinery & Manufacturing
3252	**Resin, Synthetic Rubber, and Artificial and Synthetic Fibers and Filaments Manufacturing**	**Plastics & Composites**
3261	**Plastics Product Manufacturing**	**Plastics & Composites**
3262	**Rubber Product Manufacturing**	**Plastics & Composites**

In order to give perspective to the climate of this key sector, a list of other communities with strong manufacturing sectors has been identified using their location quotients. Additionally, for consistent comparison, other Midwestern cities have been included to convey where Wichita has growth opportunities.

DRAFT

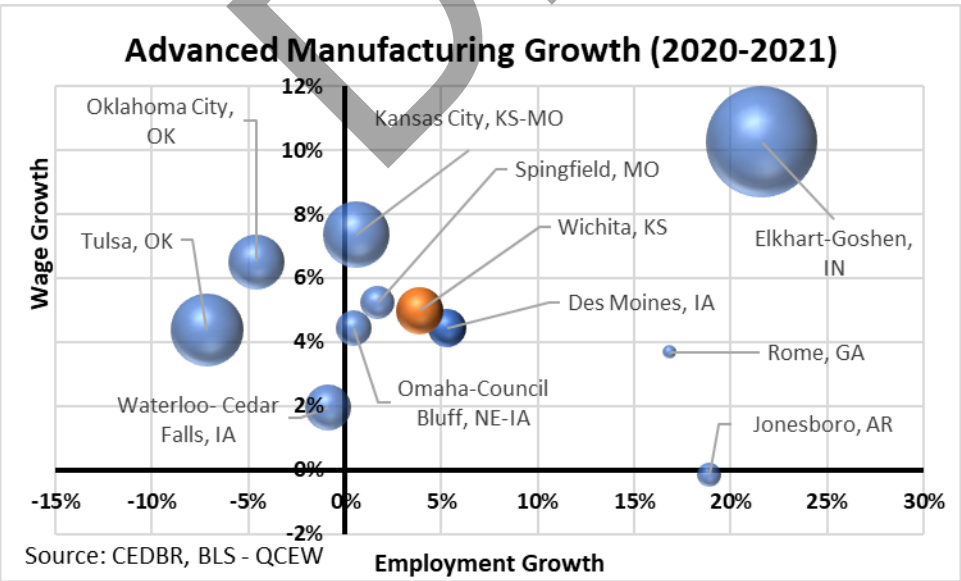
Key Advanced Manufacturing Communities
Wichita, KS MSA
Kansas City, MO-KS MSA
Des Moines- West Des Moines, IA MSA
Elkhart-Goshen, IN MSA
Jonesboro, AR MSA
Oklahoma City, OK MSA
Omaha-Council Bluffs, NE-IA MSA
Rome, GA MSA
Springfield, MO MSA
Tulsa, OK MSA
Waterloo-Cedar Falls, IA MSA

The comparison cities were selected based on the following criteria: employment concentration, size of the town, and preference for Midwest. Furthermore, all of the communities were vetted with the Greater Wichita Partnership as communities that the Wichita area competes within the respective sector.

DRAFT

In order to capture the broad industry landscape and recent competitiveness of the advanced manufacturing sector within the Wichita area, this study developed a growth matrix. The matrix captures the relative growth and size of the market compared to the selected comparable communities. Any city within the top right quadrant should be considered in a growth mode. Those in the bottom left quadrant are in declining sectors. The other two quadrants, bottom right and top left, identify economic weaknesses that must be addressed.

Of the cities being compared in the advanced manufacturing sector, Elkhart-Goshen, IN, had the most robust employment along with a high wage growth and employment growth relative to the other locations. Other Midwest locations, such as Waterloo-Cedar Falls, Oklahoma City, and Tulsa, have seen wage declines for the advanced manufacturing sector from 2020 to 2021. Meanwhile, the Wichita MSA saw increases in both wages and establishments over this time period. Overall, Wichita's advanced manufacturing sector was highly competitive.



Labor

In the realm of advanced manufacturing employment, Wichita, Kansas, has displayed consistent growth over the years. Starting with 9,028 employees in 2015, Wichita's advanced manufacturing sector witnessed a steady rise to 9,347 employees in 2021, representing a 1% annualized growth over the six years. Notably, between 2020 and 2021, the city experienced a 4% increase in employment, showcasing its resilience and ability to adapt even in challenging times. These figures highlight Wichita's status as a strong player in the advanced manufacturing industry, contributing to its economic vitality and establishing it as a hub for innovation and skilled manufacturing talent. Wichita's biggest competitors, based on growth, are Jonesboro, Rome, and Elkhart.

Advanced Manufacturing Employment

								Annualized growth	
	2015	2016	2017	2018	2019	2020	2021	2015-21	2020-21
Des Moines	5,466	5,348	5,488	5,884	6,052	5,703	6,006	1%	5%

DRAFT

When examining the larger sectors within advanced manufacturing employment, several noteworthy trends emerge. In the field of plastics product manufacturing, there has been consistent growth from 1,137 employees in 2015 to 1,384 employees in 2021, representing a 3% annualized growth over the six years. Similarly, machine shops, turned products, and screw manufacturing experienced substantial growth, increasing from 1,085 employees in 2015 to 1,389 employees in 2021, with an annualized growth rate of 4%. However, it is essential to note that some sectors faced challenges during this period. For example, coating, engraving, heat treating, and allied services witnessed a decline, dropping from 1,125 employees in 2015 to 820 employees in 2021, reflecting a significant decrease of 18% in annualized growth. Overall, these figures highlight the dynamic nature of advanced manufacturing employment and the varying trajectories of different sectors within the industry.

Advanced Manufacturing Employment

	2015	2016	2017	2018	2019	2020	2021	Annualized growth 2015-21	Annualized growth 2020-21

Souce: CEDBR, BLS - QCEW							

Another important aspect of labor is occupation classifications within an industry. The following list is an approximation of the labor supply for each of these categories. In total level, the three largest key occupations within the Wichita area were aircraft structures, miscellaneous assemblers, and inspectors.

Key Occupations		
Occupation	Wichita MSA Employment	US Employment
Helpers--Production Workers	400	131,600
Inspectors, Testers, Sorters, Samplers, and Weighers	2,660	370,510
Machinists	1,560	262,700
Buyers and Purchasing Agents	1,570	110,710
Aircraft Structure, Surfaces, Rigging, and Systems Assemblers	5,340	-
Miscellaneous Assemblers and Fabricators	3,200	-

Source: CEDBR: BLS, OES

Wages and location quotients were gathered for each occupation for the Wichita MSA. While each occupation had an above-average location quotient compared to the rest of the United States, the category of aircraft structures, surfaces, rigging, and systems assemblers had the highest location quotient of 82.69, indicating that Wichita was over eighty-two times more concentrated than the nation, giving the region a distinct labor advantage.

DRAFT

A location quotient is a statistical measure used to compare the concentration or specialization of a particular industry or occupation in a specific geographic area relative to its concentration in a larger reference area, typically a region or a nation. It is calculated by dividing the proportion of employment in a specific industry or occupation in the target area by the proportion of employment in the same industry or occupation in the reference area, and then comparing the result to a value of one. A location quotient greater than 1 indicates a higher concentration of the industry or occupation in the target area compared to the reference area, suggesting specialization or a comparative advantage in that particular sector. Conversely, a location quotient of less than 1 indicates a lower concentration, less specialization in the industry or occupation in the target area.

2021 Labor Costs - Advanced Manufacturing

Occupation (SOC code)	Mean Wage	10th Percentile Wage	90th Percentile Wage	Location Quotient
Buyers and Purchasing Agents(131020)	$73,550	$38,010	$106,950	1.69
Aircraft Structure, Surfaces, Rigging, and Systems Assemblers(512011)				82.96
Miscellaneous Assemblers and Fabricators(512090)	$38,460	$27,260	$55,370	1.1
Machinists(514041)	$47,700	$31,190	$66,850	2.46
Inspectors, Testers, Sorters, Samplers, and Weighers(519061)	$61,130	$37,130	$84,460	2.29
Helpers--Production Workers(519198)	$38,190	$28,130	$63,170	1.03

Source: CEDBR, BLS-OES

DRAFT

Productivity is an important component of the labor discussion. Using national figures, the following list of occupations has been detailed for the advanced manufacturing sector, where productivity is compared against the base year 2012. Those sectors with increasing productivity, as represented by rates above 100, are growing and have the opportunity for increased wages and profitability.

The consistently most productive segment was in metalworking machinery, while the steepest decline in productivity was seen in HVAC and commercial refrigeration equipment. Of the five most significant employment sectors within Wichita, three were growing, and two declined.

Productivity

Industry	2010	2011	2012	2013	2014	2015	2016	2017	2018	2019	2020	2021
Resin, synthetic rubber, and artificial synthetic fibers and filaments	99.0	94.4	100.0	100.1	92.8	86.8	89.7	91.5	92.3	82.0	80.2	83.6

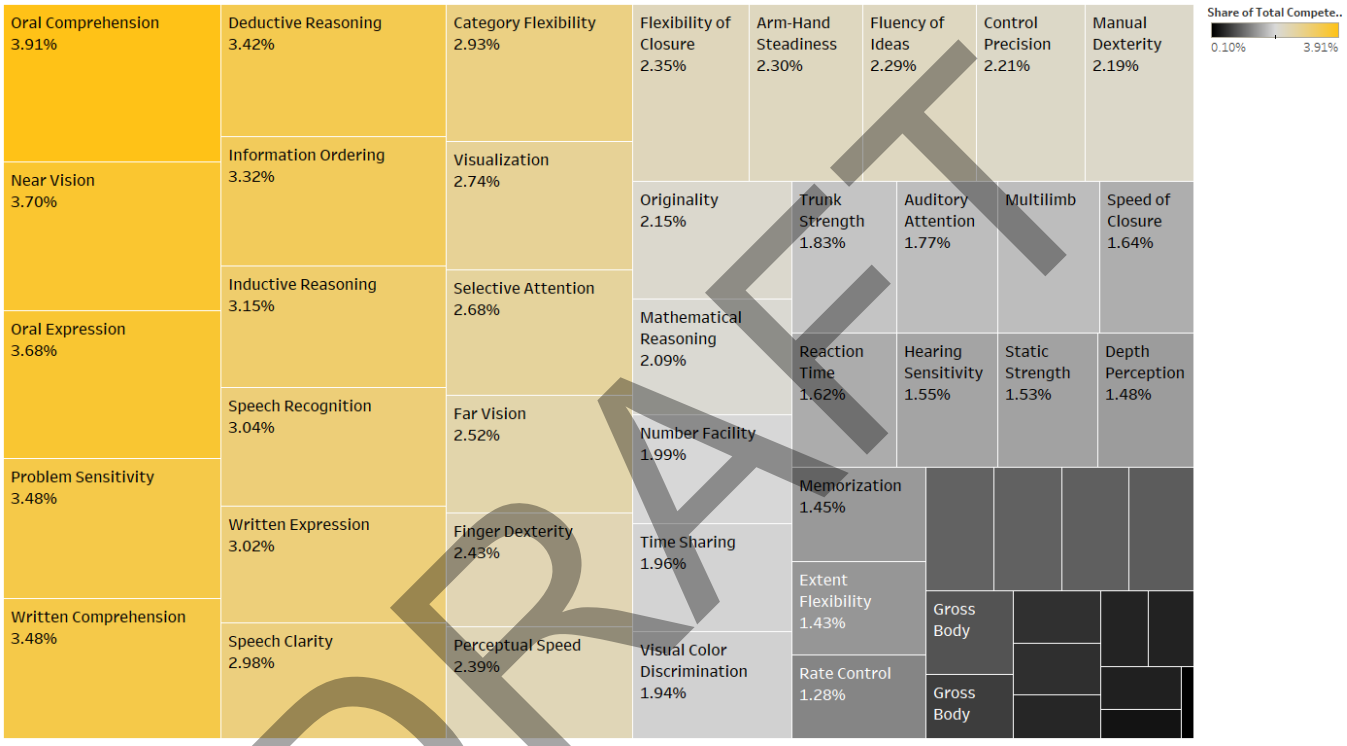
DRAFT

Another component of the labor discussion is the skills, knowledge, and abilities required for the sector of the workforce. In the advanced manufacturing sector, the most important skills were oral comprehension and near vision. The most critical knowledge component was mechanical, production and processing, and mathematics. The top abilities were active listening, critical thinking, and reading comprehension.

Skills



DRAFT

To summarize the labor conversation through the framework of this particular sector, it is important to consider the top employers. Therefore, a list of all organizations within this sector with 100 employees or more has been collected. With knowledge of these particular businesses' locations and workforce density, WAMPO can leverage this list to analyze what thoroughfares can be strengthened to propagate the industry.

Key WAMPO players

Company Name	Location Employee Size
Coleman Co Inc	1,300
Hustler Turf Equipment	800
Hustler Turf Equipment Inc	700
CNH Wichita	600
Excel Industries Inc	350
Metal-Fab Inc	300
Precision Machining Inc	264

DRAFT

Key WAMPO Thoroughfares

Using the list of major firms in the WAMPO region, the demand on the transportation system can be evaluated through three parameters; inbound goods, outbound goods, and the labor movement. When assessing the largest firm, Coleman, both the inbound and outbound goods will have a demand for heavy highway traffic. The main labor access corridor is on 37th St via I-135.

It is also to consider the commutes for laborers leaving the WAMPO region and returning after the completion of the workday. Hustler Turf Equipment in Newton is outside of the boundaries of the WAMPO region, but it is essential to consider the labor force commuting along I-135.

CNH (Case New Holland) Wichita is an agricultural equipment manufacturer with a large demand for heavy highway traffic. The main access corridor for labor commuting to this firm is Hoover Rd via K-42.

DRAFT

Balance of Trade

Overall, the total value of advanced manufacturing imports increased from $2.9 billion in 2018 to $3.7 billion in 2020, then grew to $4.1 billion in 2022. The largest subsector by value is ag & construction & machinery, which has almost doubled in size since 2019.

It is also interesting to note that the total value of Kansas exports increased from 2018 to 2020 and then decreased in 2021. Conversely, the total value of US exports increased steadily from 2018 to 2022. However, these figures are not directly related to the aerospace imports data and are included as additional context.

DRAFT

Imports - Advanced Manufacturing					
Subsector	2018	2019	2020	2021	2022
3321 Crowns/closures/seals & Other Packing Accessories	$390,260	$387,274	$349,057	$844,578	$1,727,322
3322 Cutlery & Handtools	$19,205,562	$22,214,620	$22,216,016	$30,852,322	$38,050,414
3323 Architectural & Structural Metals	$58,567,177	$20,094,678	$73,587,985	$26,007,408	$53,794,137

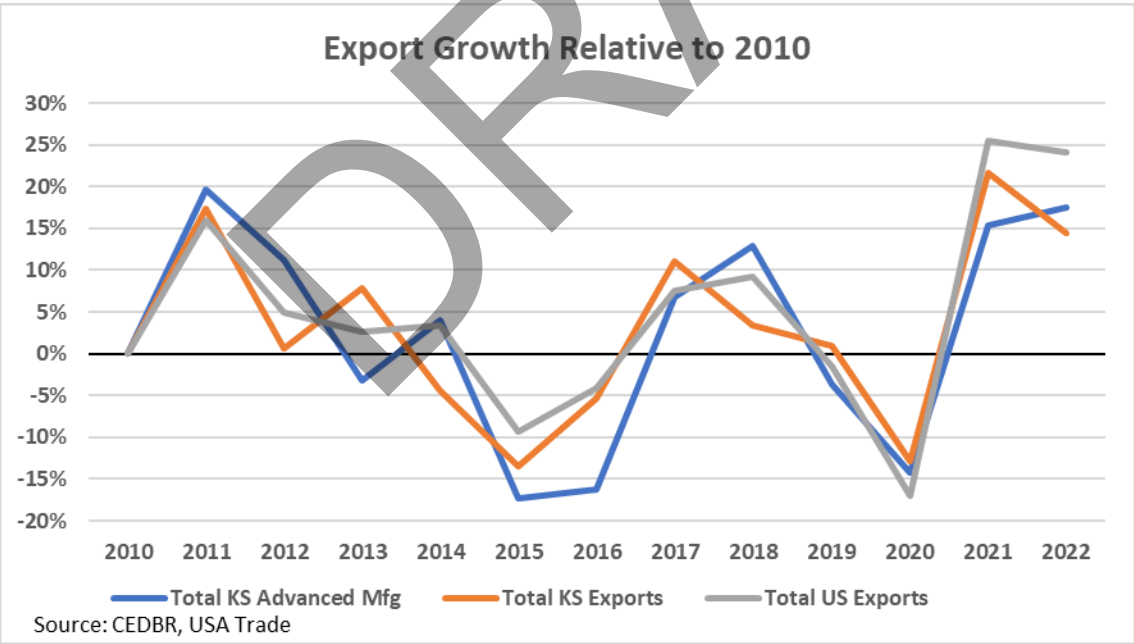
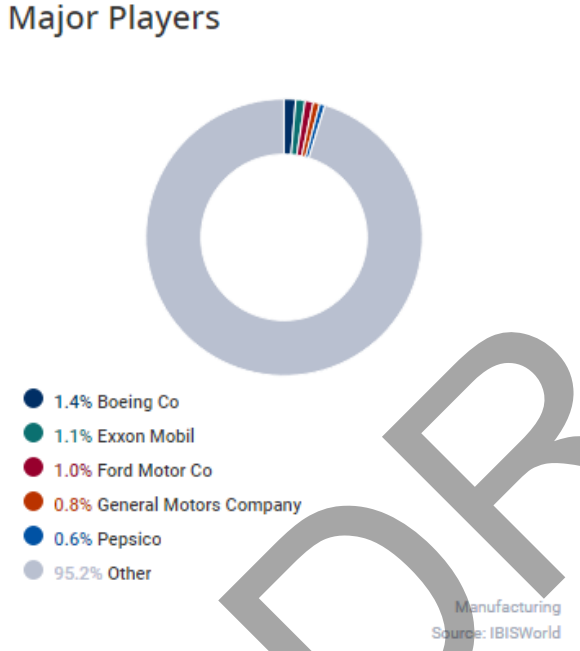
DRAFT



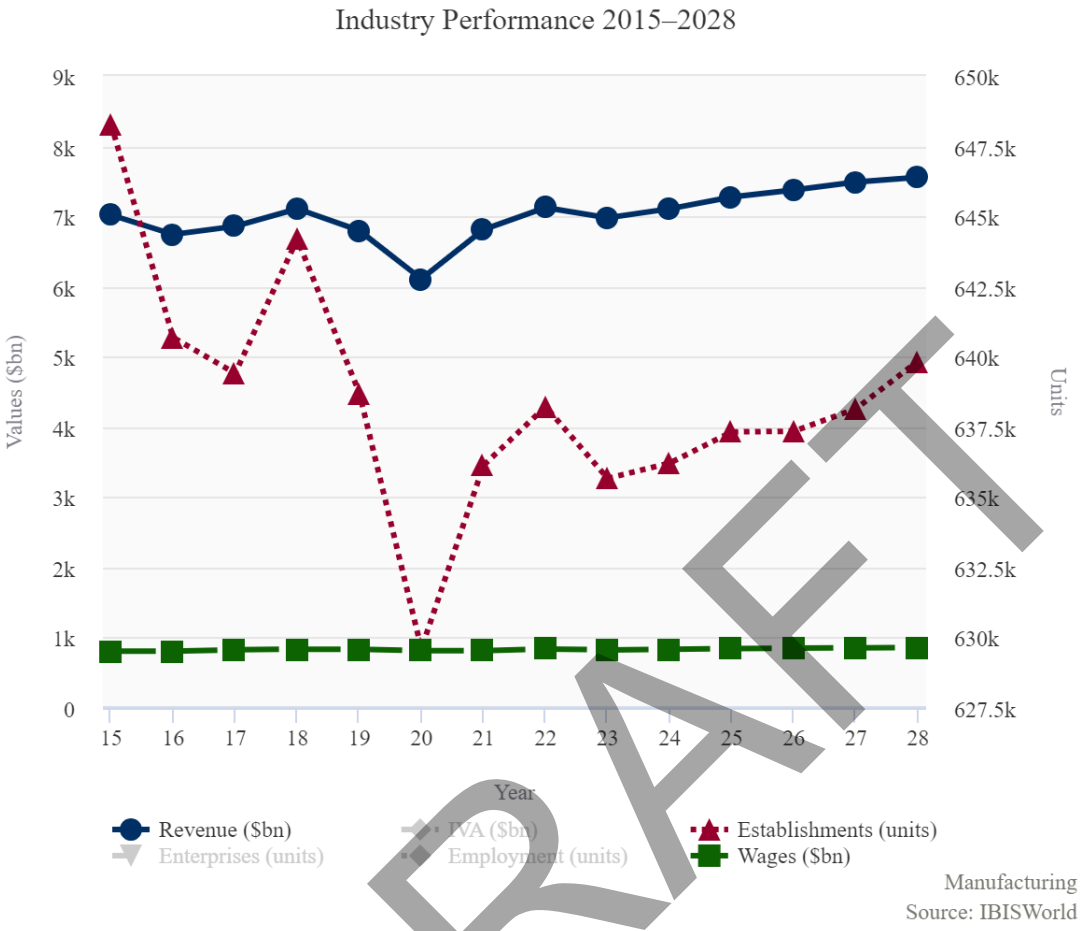
General US Trends

To assess the potential growth of the advanced manufacturing sector, this study examined five economic forces at the national level. Those broad economic conditions were then applied to the regional market, firms, and trends to provide the context of its economic competitiveness.

Overall, the US landscape in the manufacturing sector remains competitive, with no one company maintaining a majority share of the industry. In fact, only 3 of the top companies in the sector account for greater than 1%.



DRAFT



DRAFT

Threat of new entrants

- High capital requirements: The advanced manufacturing industry in Wichita is characterized by high barriers to entry, which make it difficult for new companies to enter the market. For example, setting up a new advanced manufacturing facility can range from $10 million to $100 million. However, there are several local institutional efforts to remediate these barriers, such as Deloitte's Smart Factory along with Wichita State University's GoCreate maker lab.
- Government regulations: The advanced manufacturing industry is heavily regulated, making it difficult for new companies to comply with all the requirements. For example, the Environmental Protection Agency (EPA) regulates the emissions of pollutants from advanced manufacturing facilities.
- Proprietary technology: The advanced manufacturing industry is characterized by proprietary technology, which gives existing companies a competitive advantage. For example, Wichita-based Coleman Industries has proprietary technology in designing and manufacturing outdoor equipment.

Threat of substitutes

- Low threat of substitutes: The threat of substitutes in the advanced manufacturing industry is low, as there are no close substitutes for advanced manufacturing products and services. For example, there is no other way to manufacture products with the same level of precision, efficiency, and quality as advanced manufacturing.

Bargaining power of buyers

- Moderate bargaining power of buyers: The bargaining power of buyers in the advanced manufacturing industry is moderate, as there are a limited number of major buyers, such as aerospace companies, defense contractors, and medical device manufacturers. However, buyers have some bargaining power, as they can choose to buy from other suppliers if they are unsatisfied with the price or quality of the products or services.

Bargaining power of suppliers

- Moderate bargaining power of suppliers: The bargaining power of suppliers in the advanced manufacturing industry is moderate, as there are a limited number of major suppliers, such as machine tool manufacturers, materials suppliers, and software developers. However, suppliers have some bargaining power, as they can choose to sell to other companies if they are unsatisfied with the price or volume of orders.

Rivalry among existing firms

- High rivalry among existing firms: The rivalry among existing firms in the advanced manufacturing industry is intense, as a limited number of major companies compete for a share of the market.

The advanced manufacturing industry in Wichita is a competitive sector with high rivalry among existing firms. The industry is also characterized by high barriers to entry, which make it difficult for new companies to enter the market. The threat of substitutes is low, as there are no close substitutes for advanced manufacturing products and services. The bargaining power of buyers and suppliers is moderate.

The advanced manufacturing industry is a vital part of the Wichita economy and a significant employer in the area. The industry is also a source of innovation and technology and plays an important role in the national and global economy.

Some additional factors contribute to the competitive landscape of the advanced manufacturing industry in Wichita:

DRAFT

- The presence of a skilled workforce: Wichita has a strong manufacturing workforce with a deep understanding of advanced manufacturing technologies.
- The availability of resources: Wichita has a strong infrastructure to support advanced manufacturing, including a robust supply chain, a network of research and development institutions, and a skilled workforce.

These factors make Wichita an attractive location for advanced manufacturing companies. In addition, the city has a strong track record of supporting the industry, and it offers several advantages that make it an excellent place to do business.

Introduction

This study focused on the industry landscape in the agricultural sector, focusing on labor, main thoroughfares, and the balance of trade in the Wichita area. In addition, the report analyzed the growth matrix to assess the competitiveness of the aerospace manufacturing sector in Wichita and identified opportunities and challenges within the agricultural industry.

The labor analysis revealed fluctuations in agricultural employment figures in Wichita from 2015 to 2021, with a decrease of 4% overall. However, there was a positive trend in 2021, with a 3% increase compared to the previous year. The crop production sector remained relatively stable, while animal production and aquaculture experienced fluctuations and a significant overall decrease of 7%. Support activities for crop and animal production declined, while other food manufacturing grew.

The study emphasizes the importance of key occupations, labor costs, and required skills in the agricultural sector. It notes the weak location quotient for key agriculture occupations in Wichita but highlights the urban nature of the region as a contributing factor. Critical skills identified include near vision, oral comprehension, and important knowledge components such as production and processing. Key abilities include active listening, monitoring, and critical thinking.

Thoroughfares analysis focuses on major firms in the Wichita region, highlighting transportation demands related to inbound goods, outbound goods, and labor movement. Cargill and Smithfield Foods are mentioned as firms with heavy highway traffic demands and labor access needs.

Lastly, the study assesses the threats and bargaining powers within the agricultural industry. It identifies low barriers to entry, a moderate threat of substitutes, high bargaining power of buyers, and moderate bargaining power of suppliers. Rivalry among existing firms is moderate, with numerous companies competing for market share.

In conclusion, the agricultural industry in Wichita is competitive, with opportunities for growth but also challenges that require ongoing analysis and support. The industry plays a vital role in the Wichita economy, as a major employer and contributor to the national and global food supply chain.

Industry Landscape

The following NAICS codes, provided by the Greater Wichita Partnership, constitute the category of agriculture, which includes both farm production and manufacturing-related firms. These codes were used to extract specific industry data related to these subsections.

Agriculture		
NAICS	Description	Subsector
111	Crop Production	Crop and Animal Farming
112	Animal Production and Aquaculture	Crop and Animal Farming
1151	Support Activities for Crop Production	Crop and Animal Farming
1152	Support Activities for Animal Production	Crop and Animal Farming
3112	Grain and Oilseed Milling	Value-added Products
3115	Dairy Product Manufacturing	Value-added Products
3116	Animal Slaughtering and Processing	Value-added Products
3119	Other Food Manufacturing	Value-added Products
3274	Lime and Gypsum Product Manufacturing	Value-added Products
325193	Ethyl Alcohol Manufacturing	Value-added Products
325199	All Other Basic Organic Chemical Manufacturing	Value-added Products

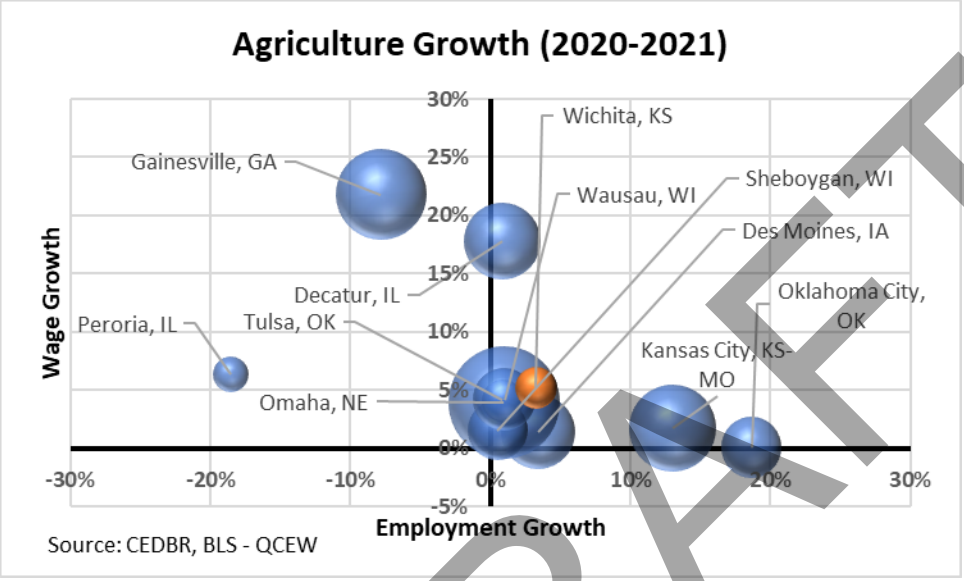
Key Agriculture Communities
Decatur, IL MSA
Des Moines, IA MSA
Gainesville, GA MSA
Kansas City, KS-MO MSA
Oklahoma City, OK MSA
Omaha-Council Bluff, NE-IA MSA
Peoria, IL MSA
Sheboygan, WI MSA
Tulsa, OK MSA
Wausau, WI MSA
Wichita, KS MSA

The comparison cities were selected based on the following criteria: employment concentration, size of the town, and preference for Midwest. Furthermore, all of the communities were vetted with the Greater Wichita Partnership as communities that the Wichita area competes within the respective sector.

In order to capture the broad industry landscape and recent competitiveness of the aerospace manufacturing sector within the Wichita area, this study developed a growth matrix. The matrix captures the relative growth and size of the market compared to the selected comparable communities. Any city within the top right quadrant should be considered in a growth mode. Those in the bottom left quadrant are in declining sectors. The other two quadrants, bottom right and top left, identify economic weaknesses that must be addressed.

DRAFT

The WAMPO region saw increases in both wages and employment in the agriculture sector from 2020-2021. Of the cities being compared, the largest concentration of agricultural employment was in Omaha-Council Bluff area. While Kansas is known for its robust agricultural industry, the Wichita area is generally utilized for processing agricultural goods through firms such as Cargill and Smithfield Foods. Overall, Wichita remains relatively competitive compared to the other cities, with a balance of both employment and wage growth.



DRAFT

Labor

Among the listed cities, Wichita experienced fluctuations in its agriculture employment figures from 2015 to 2021. Starting at 2,280 jobs in 2015, the numbers decreased slightly to 2,198 in 2016 and 2,176 in 2017. However, there was a notable increase in 2018 when employment reached 2,607 jobs. Unfortunately, this growth was short-lived, dropping to 2,274 in 2019. The decline continued in 2020, with only 1,538 jobs available in the agriculture sector. Despite the challenges faced, there was a modest recovery in 2021, with employment rising to 1,588 jobs. When considering the period from 2015 to 2021, Wichita experienced an overall decrease of 4% in agriculture employment. However, there was a positive trend in 2021, with a 3% increase compared to the previous year. These figures reflect the dynamic nature of the agriculture industry in Wichita, highlighting the need for ongoing analysis and support to promote growth and stability in the sector.

Agriculture Employment									
								Annualized growth	
	2015	2016	2017	2018	2019	2020	2021	2015-21	2020-21

Source: CEDBR, BLS- QCEW

Looking at the larger sectors within agriculture employment, there were notable trends and changes between 2015 and 2021. In the crop production sector, employment figures remained relatively stable, starting at 176 jobs in 2015 and slightly decreasing to 173 jobs in 2021. This sector experienced a marginal annualized growth rate of 0% during the period, with a modest 2% increase in 2021 compared to the previous year. On the other hand, animal production and aquaculture witnessed fluctuations, with 400 jobs in 2015, peaking at 448 jobs in 2016, and then gradually declining to 193 jobs in 2020 and 2021. As a result, this sector experienced a significant overall decrease of 7% during the period. Support activities for crop and animal production also saw declines in employment, with the former experiencing a 9% decrease and the latter a 6% increase from 2015 to 2021. In terms of food manufacturing, animal slaughtering and processing saw a decline from 1,616 jobs in 2015 to 1,112 jobs in 2021, with an overall decline of 4%, although there was a slight increase of 3% in 2021 compared to the previous year. Other food manufacturing, however, experienced growth, with a notable 8% increase from 2015 to 2021 and a significant 24% increase from 2020 to 2021, reaching 78 jobs in the latter year.

DRAFT

When discussing the opportunities for growth, it is important to consider the agricultural sector's key occupations and labor costs. For the three key Agriculture occupations listed by the BLS, the Wichita MSA had a weak location quotient. It should be taken into consideration that this is largely due in part to the urban nature of the WAMPO region and that occupations for food processing weren't included in the reference list.

Key Occupations

Occupation	Wichita MSA Employment	US Employment
Agricultural Equipment Operators	50	15,140
Farmworkers and Laborers, Crop, Nursery, and Greenhouse	170	210,970
First-Line Supervisors of Farming, Fishing, and Forestry Workers	30	14,430

Source: CEDBR: BLS, OES

A location quotient is a statistical measure used to compare the concentration or specialization of a particular industry or occupation in a specific geographic area relative to its concentration in a larger reference area, typically a region or a nation. It is calculated by dividing the proportion of employment in a specific industry or occupation in the target area by the proportion of employment in the same industry or occupation in the reference area, and then comparing the result to a value of one. A location quotient greater than 1 indicates a higher concentration of the industry or occupation in the target area compared to the reference area, suggesting specialization or a comparative advantage in that particular sector. Conversely, a location quotient of less than 1 indicates a lower concentration, less specialization in the industry or occupation in the target area.

2021 Labor Costs - Agriculture

Occupation (SOC code)	Mean Wage	10th Percentile Wage	90th Percentile Wage	Location Quotient
First-Line Supervisors of Farming, Fishing, and Forestry Workers(451011)	$46,400	$37,330	$62,150	0.62

Another component of the labor discussion is the skills, knowledge, and abilities required for the sector of the workforce. For example, in the agricultural sector, the most important skills were near vision and oral comprehension. The most critical knowledge component was production and processing and customer and personal service. The most important abilities were active listening, monitoring, and critical thinking.

DRAFT

To summarize the labor conversation through the framework of this particular sector, it is important to consider where the workforce is commuting throughout the day. Therefore, a list of all organizations within this sector with 100 employees or more has been collected.

Key WAMPO players

Company Name	Location Employee Size
Cargill Meat Solutions Inc	800
Smithfield Foods	425
Icm Inc	200
Hiland Dairy Foods Co	130
Dold Foods LLC	100

Source: CEDBR, Data Axle

Main WAMPO Thoroughfares

Using the list of major firms in the WAMPO region, the demand on the transportation system can be evaluated through three parameters; inbound goods, outbound goods, and the labor movement. Cargill has three separate locations in the downtown Wichita area. The processing plant at 13th St & Mosely Ave is the most likely to have heavy highway traffic demands. Meanwhile, the other campuses have demand for labor access at the corners of Rock Island Ave & Douglas Ave along with 1st St and N Wichita St.

Balance of Trade

The total agriculture imports for Kansas were $356,075,429 in 2018, which increased to $546,508,677 in 2022, a significant growth of over $190 million in four years. This growth suggests an increasing demand for agricultural products in the state.

The chart also shows the import values for five specific agricultural subsectors, namely Grain & Oilseed Milling Products, Dairy Products, Meat Products & Meat Packaging Products, Foods Nesoi, and Lime & Gypsum Products. The Grain & Oilseed Milling Products subsector contributed the most to the total agricultural imports in all five years, with import values ranging from $218,892,679 in 2020 to $363,768,795 in 2022. The second largest subsector was Meat Products & Meat Packaging Products, which saw an increase in import values from $68,400,958 in 2018 to $111,540,546 in 2022, indicating increased demand for meat products.

In contrast, Dairy Products and Foods Nesoi subsectors had lower import values than Grain & Oilseed Milling Products and Meat Products & Meat Packaging Products, with Dairy Products experiencing a decline in import values from $221,156 in 2018 to $667,965 in 2022. In addition, the Lime & Gypsum Products subsector had very low import values, indicating that it may not be a significant contributor to the overall agricultural imports for the state.

Imports - Agriculture					
Subsector	2018	2019	2020	2021	2022
3112 Grain & Oilseed Milling Products	$237,144,474	$236,187,941	$218,892,679	$280,284,254	$363,768,795

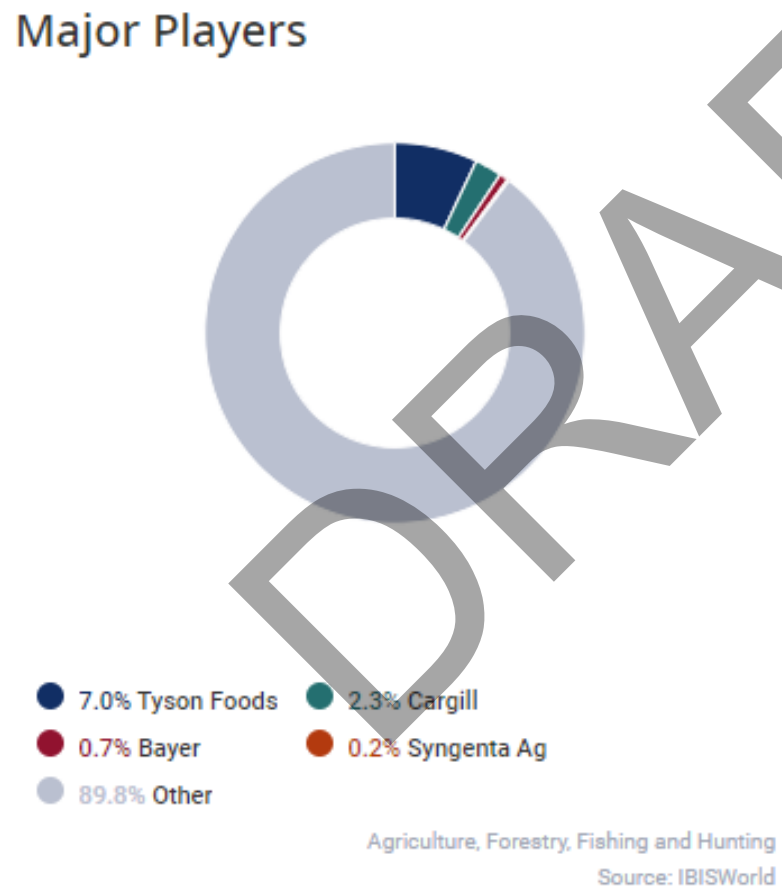
DRAFT

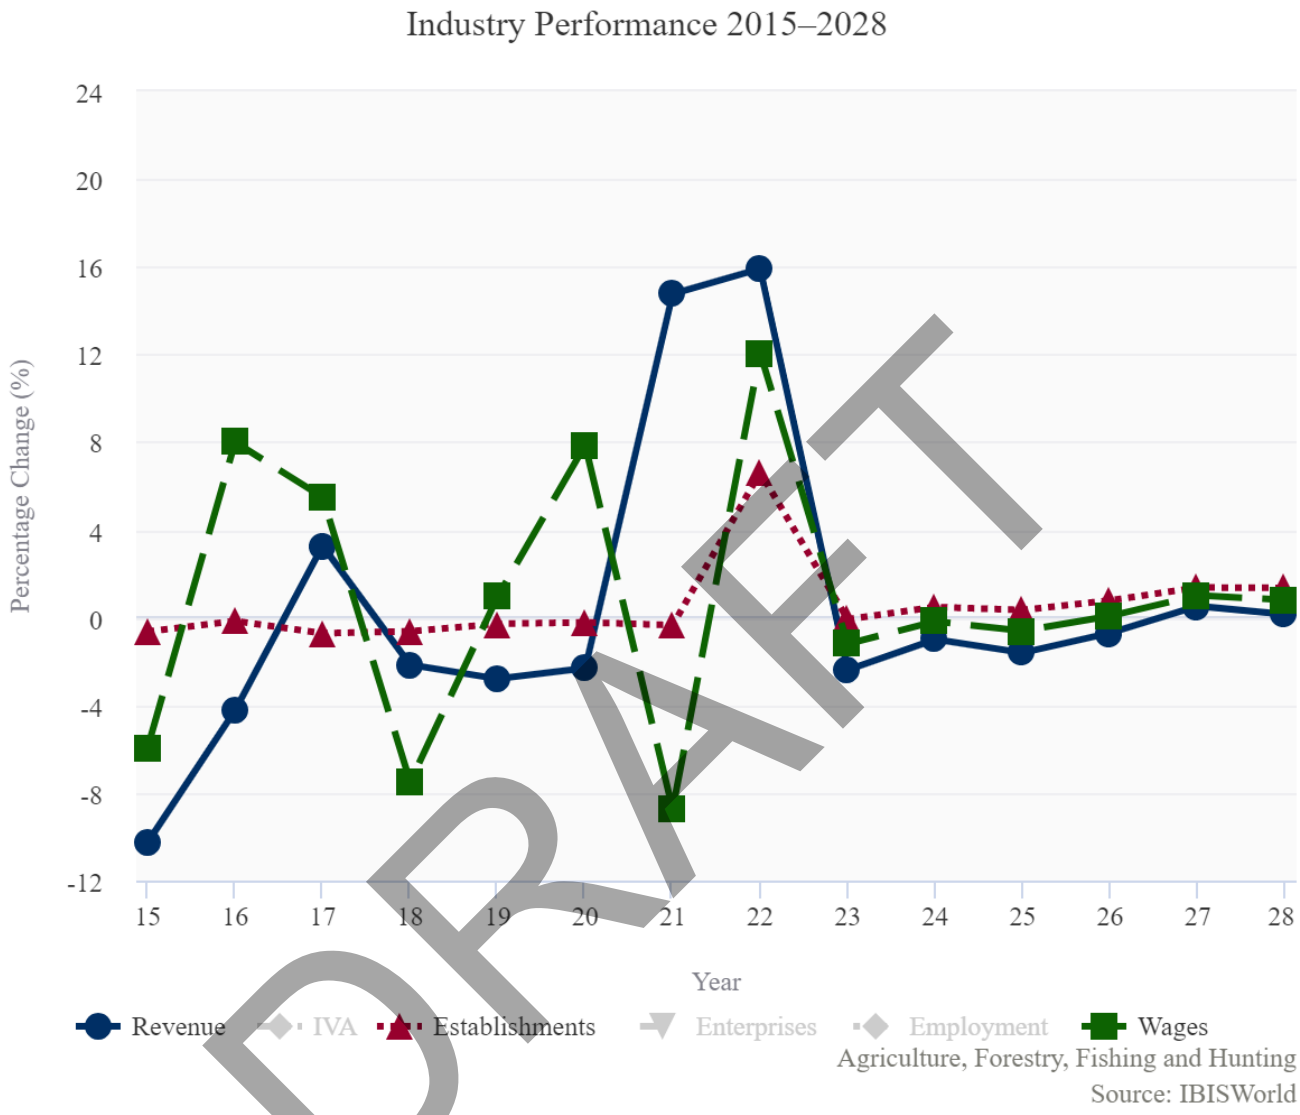
General US Trends

To assess the potential growth of the agriculture sector, this study examined five economic forces at the national level. Those broad economic conditions were then applied to the regional market, firms, and trends to provide the context of its economic competitiveness.

The competitive landscape for the agricultural sector is strong, as only 2 companies maintain a proportion greater than 1% of the sector. Cargill is a key player to consider for the Wichita economy, as their global headquarters is located here. Per Data Axle, Cargill employs 800 people in the Wichita area. Their presence includes a beef processing plant, protein ingredients plant, feed mill, and multiple office and support facilities. It should also be noted that Cargill has deep economic ties across the state.



DRAFT



DRAFT

Threat of new entrants

- Mixed capital requirements: The farming portion of the agricultural industry is not capital-intensive, requiring relatively small investments in research and development, manufacturing, and marketing. For example, a small farmer can start a business with a relatively small land, equipment, and seed investment. However, when discussing the manufacturing and processing side of agriculture, the capital demands can be higher depending upon factors such as the scale of the facility and the specificity of the infrastructure.

- Few government regulations: The agricultural industry is not heavily regulated, which does not make it difficult for new companies to comply with all of the requirements. For example, there are relatively few regulations on the production of food crops.
- No proprietary technology: The agricultural industry is not characterized by proprietary technology, which does not give existing companies a competitive advantage. For example, there is no patent on the process of growing corn.

Threat of substitutes

- Moderate threat of substitutes: The threat of substitutes in the agricultural industry is moderate, as there are a number of alternative products and services available, such as imported food and food grown in other parts of the United States. For example, consumers can buy imported grains or meats instead of domestically grown ones. Additionally, consumers can experience dietary changes that will affect the demand for products.

Bargaining power of buyers

- High bargaining power of buyers: The bargaining power of buyers in the agricultural industry is high, as there are a large number of buyers, such as grocery stores, restaurants, and food processors. For example, grocery stores can negotiate with farmers for a lower product price.

Bargaining power of suppliers

- Moderate bargaining power of suppliers: The bargaining power of suppliers in the agricultural industry is moderate, as there are a limited number of major suppliers, such as seed companies, fertilizer companies, and agricultural equipment manufacturers. However, suppliers have some bargaining power, as they can choose to sell to other companies if they are unsatisfied with the price or volume of orders.

Rivalry among existing firms

- Moderate rivalry among existing firms: The rivalry among existing firms in the agricultural industry is moderate, as a large number of companies compete for a share of the market. However, the rivalry is not as intense as in some other industries, such as the pharmaceutical industry.

The agricultural industry in Wichita is a competitive industry, with a moderate level of rivalry among existing firms. The industry is also characterized by low barriers to entry, which make it relatively easy for new companies to enter the market. The threat of substitutes is moderate, as there are a number of alternative products and services available. The bargaining power of buyers is high, as there are a

DRAFT

large number of buyers. The bargaining power of suppliers is moderate, as there are a limited number of major suppliers.

The agricultural industry is a vital part of the Wichita economy and a major employer in the area. The industry is also a source of food for the nation and the world, and it plays an important role in the national and global economy.

Introduction

The report provides an overview of the energy sector in Wichita, Kansas, focusing on its employment trends, productivity, skills required, transportation infrastructure, balance of trade, and general industry landscape.

In terms of employment, Wichita experienced a decline in energy sector jobs from 2015 to 2021, with an overall decrease of 5%. The largest three sectors within energy employment saw significant changes during this period, with oil and gas extraction and support activities for mining experiencing declines, while the petroleum lubricating oil and grease sector remained relatively stable. Other sectors, such as other chemical products and preparation and geophysical surveying and mapping services, also experienced slight declines.

Productivity in the energy sector showed growth in most subsectors, particularly in oil and gas extraction, driven by investments in equipment and technology. The report emphasizes the need for adaptability and strategic planning to navigate the dynamic nature of the industry.

The balance of trade analysis reveals an increase in energy imports and exports in Kansas, with oil and gas having the highest import value. Other chemical products and preparations also saw an increase in imports, while soaps, cleaning compounds, and toilet preparations experienced some volatility. The broader economic context shows stable wages, marginal revenue growth, and an increased number of establishments in the energy sector over the past decade.

Examining the industry through the lens of economic forces, the report identifies high capital requirements, government regulations, and proprietary technology as barriers to entry for new companies. The threat of substitutes is low, and the bargaining power of buyers and suppliers is moderate. Rivalry among existing firms is high, accompanied by high barriers to entry.

Overall, the energy sector is a vital part of Wichita's economy, but it faces challenges such as declining employment and wage trends. Adapting to market dynamics, investing in technology, and addressing infrastructure needs are key to promoting growth and stability in the sector.

Industry Landscape

The following NAICS codes, provided by the Greater Wichita Partnership, constitute the category of energy, which includes production, manufacturing, and service sectors. These codes were used to extract specific industry data related to these subsections.

Energy		
NAICS	Description	Subsector
2111	Oil and Gas Extraction	Production, Processing, and Distribution
2131	Support Activities for Mining	Production, Processing, and Distribution
4861	Pipeline Transportation of Crude Oil	Production, Processing, and Distribution
4862	Pipeline Transportation of Natural Gas	Production, Processing, and Distribution
4869	Other Pipeline Transportation	Production, Processing, and Distribution
324110	Petroleum Refineries	Production, Processing, and Distribution
541360	Geophysical Surveying and Mapping Services	Production, Processing, and Distribution
3255	Paint, Coating, and Adhesive Manufacturing	Petroleum-based Products
3256	Soap, Cleaning Compound, and Toilet Preparation Manufacturing	Petroleum-based Products
3259	Other Chemical Product and Preparation Manufacturing	Petroleum-based Products
324191	Petroleum Lubricating Oil and Grease Manufacturing	Petroleum-based Products
325130	Synthetic Dye and Pigment Manufacturing	Petroleum-based Products

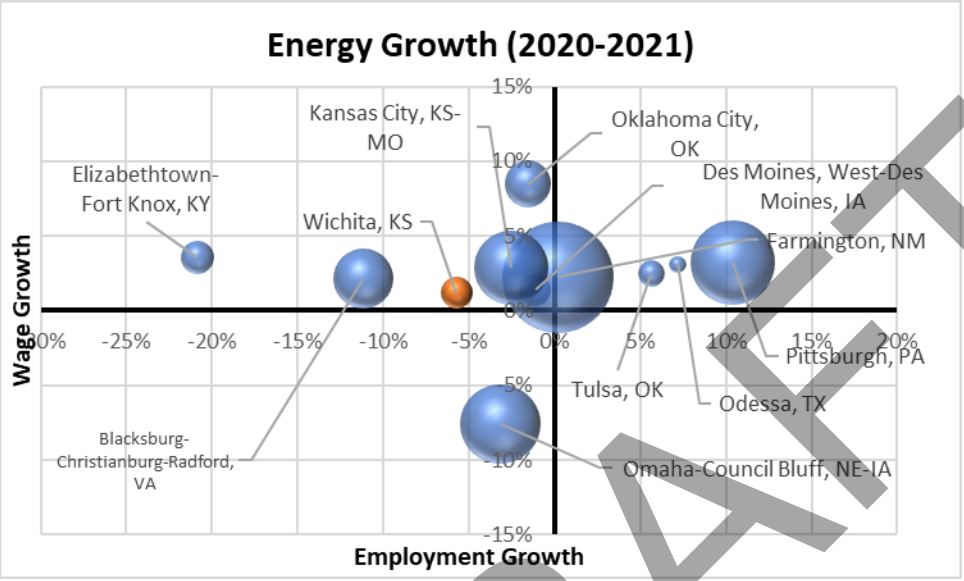
Key Energy Communities
Blacksburg-Christiansburg-Radford, VA MSA
Des Moines-West Des Moines, IA MSA
Elizabethtown-Fort Knox, KY MSA
Farmington, NM MSA
Kansas City, KS-MO MSA
Odessa, TX MSA
Oklahoma City, OK MSA
Omaha-Council Bluff, NE-IA MSA
Pittsburgh, PA MSA
Tulsa, OK MSA
Wichita, KS MSA

The comparison cities were selected based on the following criteria: employment concentration, size of the town, and preference for Midwest. Furthermore, all of the communities were vetted with the Greater Wichita Partnership as communities that the Wichita area competes within the respective sector.

In order to capture the broad industry landscape and recent competitiveness of the aerospace manufacturing sector within the Wichita area, this study developed a growth matrix. The matrix captures the relative growth and size of the market compared to the selected comparable communities. Any city within the top right quadrant should be considered in a growth mode. Those in the bottom left quadrant are in declining sectors. The other two quadrants, bottom right and top left, identify economic weaknesses that must be addressed.

DRAFT

Pittsburgh has the strongest position on the chart, as they had growth in both wages and employment along with a robust size of workers. Tulsa and Odessa also saw growth in both wages and employment despite having smaller workforces. Compared to other cities, Wichita's employment within the energy sector was smaller than most other communities being analyzed. While wages did grow from 2020-2021, employment declined by 6% in the Wichita region.



Labor

In the realm of energy employment, Wichita, KS MSA, experienced a decline in job numbers from 2015 to 2021. Over the period from 2015 to 2021, Wichita experienced an overall decrease of 5% in energy employment. Additionally, there was a continued decline of 6% in 2021 compared to the previous year. These figures highlight the challenges faced by the energy industry in Wichita and the need for efforts to promote growth and stability in the sector.

When examining the largest three sectors within energy employment, there were significant trends and changes between 2015 and 2021. In the oil and gas extraction sector, employment numbers experienced a decline from 477 jobs in 2015 to 290 jobs in 2021, resulting in an overall decrease of 6% during the period. Similarly, the support activities for the mining sector witnessed a significant decrease, starting at 722 jobs in 2015 and dropping to 248 jobs in 2021, with an overall decline of 9%. In contrast, the petroleum lubricating oil and grease sector remained relatively stable with 526 jobs in 2015 and maintaining the same number of jobs in 2021. Other sectors, such as other chemical products and preparation and geophysical surveying and mapping services, experienced slight declines in employment. At the same time, pipeline transportation of natural gas saw a modest 2% increase in jobs from 2015 to 2021. These figures reflect the dynamic nature of the energy industry, with shifts in employment across various sectors emphasizing the need for adaptability and strategic planning.

DRAFT

For occupations within the Energy industry, Wichita had an above-average location quotient for each listed. Most notably, Wichita had the strongest location quotient for operating engineers and other construction equipment operators.

Key Occupations

Occupation	Wichita MSA Employment	US Employ
First-Line Supervisors of Construction Trades and Extraction Workers	1,730	28,450
Operating Engineers and Other Construction Equipment Operators	1,390	22,920
Roustabouts, Oil and Gas	80	33,740

Source: CEDBR: BLS, OES

A location quotient is a statistical measure used to compare the concentration or specialization of a particular industry or occupation in a specific geographic area relative to its concentration in a larger reference area, typically a region or a nation. It is calculated by dividing the proportion of employment in a specific industry or occupation in the target area by the proportion of employment in the same industry or occupation in the reference area, and then comparing the result to a value of one. A location quotient greater than 1 indicates a higher concentration of the industry or occupation in the target area compared to the reference area, suggesting specialization or a comparative advantage in that particular sector. Conversely, a location quotient of less than 1 indicates a lower concentration, less specialization in the industry or occupation in the target area.

2021 Labor Costs - Energy

Occupation (SOC code)	Mean Wage	10th Percentile Wage	90th Percentile Wage	Location Quotient
First-Line Supervisors of Construction Trades and Extraction Workers(471011)	$70,050	$46,580	$98,330	1.2
Operating Engineers and Other Construction Equipment Operators(472073)	$49,120	$34,440	$68,350	1.64
Roustabouts, Oil and Gas(475071)	$46,940	$29,490	$85,310	1.02

Source: CEDBR, BLS-OES

Productivity is an important component of the labor discussion. Using national figures, the following list of occupations has been detailed for the energy sector, where productivity is compared against the base year 2012. Those sectors with increasing productivity, as represented by rates above 100, are growing and have the opportunity for increased wages and profitability.

Of the seven subsectors within the energy, six have increasing productivity rates. The most significant growth was within oil and gas extraction. An underlying factor for the energy sector's growth across most of the subsectors was a mature sector, an aging workforce, and a technology shift called fracking. All three forces forced the industry to invest in equipment and technology, dramatically increasing the value-added per worker.

Energy Productivity

Industry	2010	2011	2012	2013	2014	2015	2016	2017	2018	2019	2020	2021

Another component of the labor discussion is the skills, knowledge, and abilities required for the sector of the workforce. The most important skills in the agricultural sector were oral comprehension and expression. The most crucial knowledge components were mechanical and mathematics. Finally, the most essential abilities were critical thinking and reading comprehension.

DRAFT

To summarize the labor conversation through the framework of this particular sector, it is important to consider where the workforce is commuting throughout the day. Therefore, a list of all organizations within this sector with 100 employees or more has been collected. With knowledge of these particular businesses' locations and workforce density, WAMPO can leverage this list to analyze what thoroughfares can be strengthened to propagate the industry.

Key WAMPO players

Company Name	Location Employee Size
Koch Industries Inc	3,000
Frontier El Dorado Refining	375
Oxychem	300
BG Products Inc	200
Koch Energy Svc LLC	102

Source: CEDBR, Data Axle

Key WAMPO Thoroughfares

Koch Industries, and more specifically Flint Hills Resources, is a major employer in the Wichita area. Inbound goods are likely to be brought by either light freight or heavy highway with outbound goods having a demand for heavy highway traffic. The main labor access points are along 37th St via Oliver St and Hillside St via K-96.

DRAFT

Occidental Chemical, or OxyChem, is a chemical plant in the Southwest area of Wichita. Both inbound and outbound goods are likely to be transported via rail and heavy highway. The main labor access is along Ridge Road via Southwest Blvd.

DRAFT

DRAFT

Balance of Trade

In 2018, the total value of energy imports was $105.1 million, and it increased to $242.1 million by 2022. Among the subsectors, Oil & Gas has the highest import value, with $27.4 million in 2018, which decreased to $13.0 million in 2019 but saw a significant increase to $142.9 million in 2022.

In contrast, the other three subsectors have relatively stable import values over the years. The subsector with the second-highest import value was Other Chemical Products & Preparations, which accounted for $49.1 million in 2018 and increased to $63.9 million in 2022. The subsector of Soaps, Cleaning Compounds & Toilet Preparations experienced some volatility over the past 5 years, with an import value of $25.8 million in 2018, before rising to $31.6 million in 2022. Paints, Coatings &

Adhesives had the lowest import value among the subsectors, with a total of $2.9 million in 2020, increasing to $3.9 million in 2021 and then declining to $3.6 million in 2022.

In terms of the broader economic context, the total value of energy imports in Kansas increased from $97.9 million in 2019 to $120.9 million in 2021 before experiencing a significant increase to $242.1 million in 2022. Similarly, Kansas energy exports saw a similar increase from $565 million in 2018 to $940 million in 2023.

Imports - Energy

Subsector	2018	2019	2020	2021	2022
2111 Oil & Gas	$27,376,844	$13,013,909	$9,859,937	$30,900,541	$142,974,598

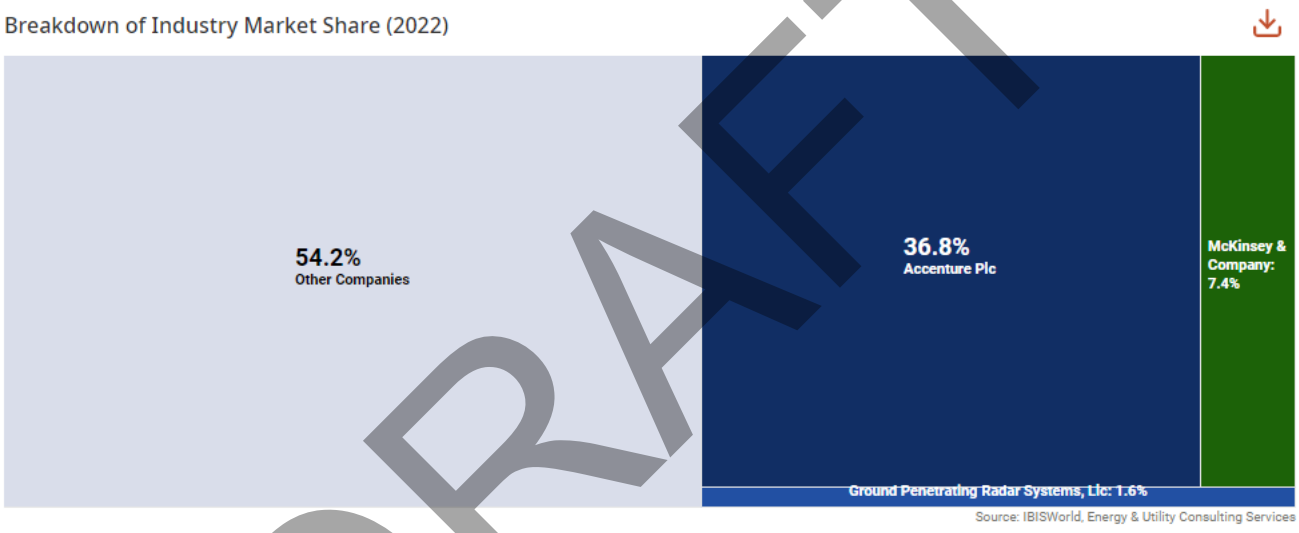
DRAFT

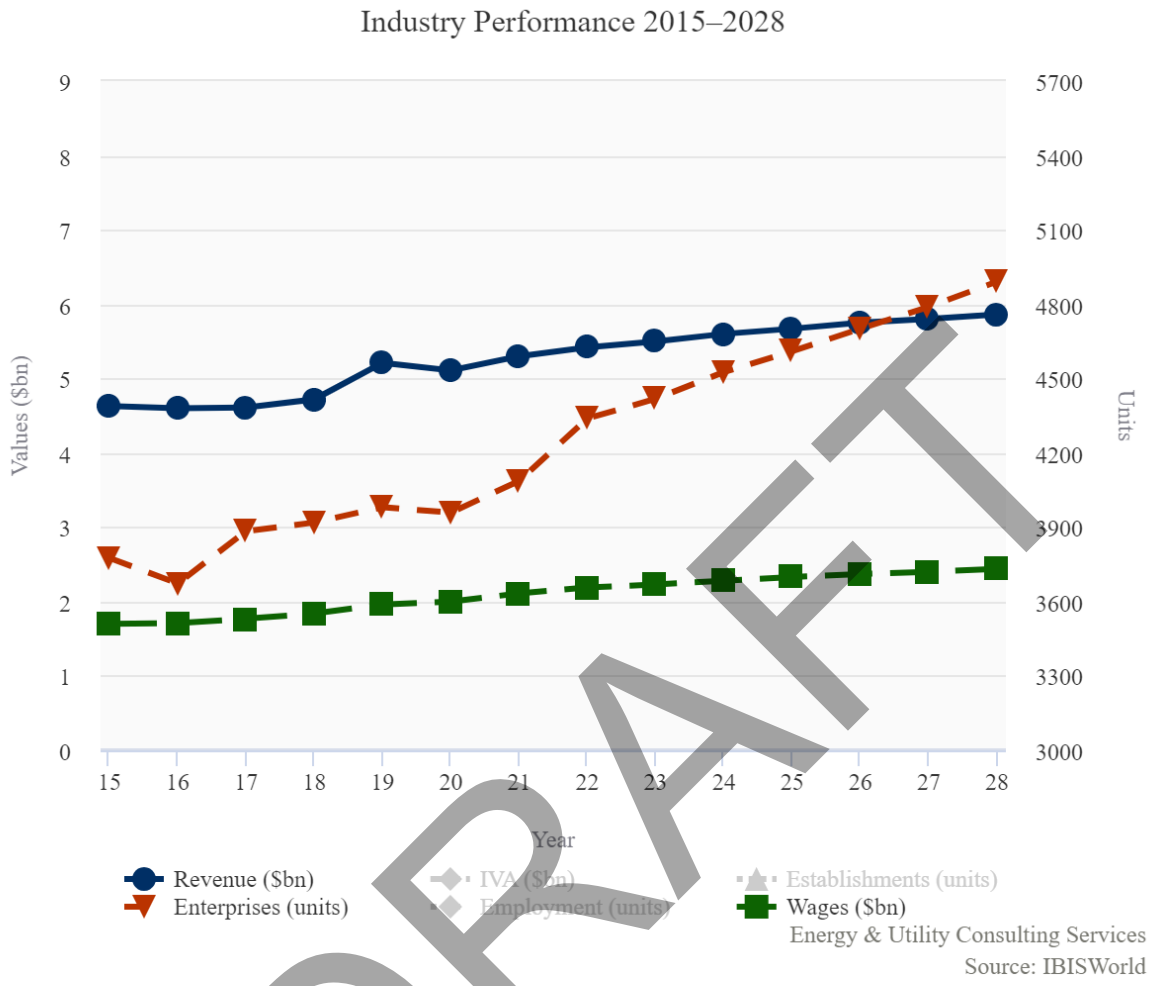
General US Trends

To assess the potential growth of the energy sector, this study examined five economic forces at the national level. Those broad economic conditions were then applied to the regional market, firms, and trends to provide the context of its economic competitiveness.

Evaluating overall industry performance, the energy sector has had stable wages, yet marginally increasing wages. Meanwhile, the same can be said for the total revenue, with a small dip in 2020 likely due in part to the effects of the COVID-19 pandemic. However, the number of total establishments has increased over the past decade, which is expected to continue.



DRAFT



DRAFT

To coincide with the sectors outlined by the Greater Wichita Partnership, oil and gas processing and chemical manufacturing are the two constituents of the energy sector with the greatest prominence for discussion. These can be analyzed through the framework of economic forces to add deeper insights.

Threat of new entrants

- High capital requirements: The energy sector, specifically oil and gas, is capital-intensive, requiring large investments in research and development, manufacturing, and marketing. For example, the cost of developing a new energy technology can range from $100 million to $1 billion.
- Government regulations: The energy sector is heavily regulated, making it difficult for new companies to comply with all the requirements. For example, the Environmental Protection Agency (EPA) regulates the emissions of pollutants from energy facilities.

- Proprietary technology: The energy sector is characterized by proprietary technology, which gives existing companies a competitive advantage. For example, Koch Industries has proprietary technology in the production of ethanol.

Threat of substitutes

- Low threat of substitutes: The threat of substitutes in the energy sector is low, as there are no close substitutes for energy. For example, there are limited other means to power homes, businesses, and transportation.

Bargaining power of buyers

- Moderate bargaining power of buyers: The bargaining power of buyers in the energy sector is moderate, as there are few major buyers, such as utilities and industrial companies. However, buyers have some bargaining power, as they can choose to buy from other suppliers if they are unsatisfied with the price or quality of the products or services.

Bargaining power of suppliers

- Moderate bargaining power of suppliers: The bargaining power of suppliers in the energy sector is moderate, as there are a limited number of major suppliers, such as oil and gas companies, coal companies, and nuclear power companies. However, suppliers have some bargaining power, as they can choose to sell to other companies if they are unsatisfied with the price or volume of orders.

Rivalry among existing firms

The energy sector in Wichita is a competitive industry with a high level of rivalry among existing firms. The industry is also characterized by high barriers to entry, which make it difficult for new companies to enter the market. The threat of substitutes is low, as there are no close substitutes for energy. The bargaining power of buyers and suppliers is moderate.

The energy sector is a vital part of the Wichita economy, and it is a major employer in the area, with a large portion of the labor market commuting to Frontier El Dorado Refining, OxyChem, and Koch Industries (Flint Hills Resources). The industry is also a source of innovation and technology, and it plays an important role in the national and global economy.

DRAFT

Introduction

The healthcare industry in the Wichita area has shown relatively stable employment levels from 2015 to 2021. Although there were minor fluctuations, the number of healthcare jobs remained consistent, indicating a steady demand for healthcare services in the region. However, within the healthcare sector, different areas experienced varied levels of growth. Offices of physicians and offices of dentists saw slight declines or minimal increases, while offices of other health practitioners and outpatient care centers exhibited steady growth. Other ambulatory healthcare services experienced a significant decrease, while general medical and surgical hospitals and nursing care facilities remained relatively stable. Continuing care retirement communities faced a decline. Among key healthcare occupations, licensed practical and licensed vocational nurses showed an above-average location quotient in Wichita.

When considering labor in the healthcare sector, it is important to analyze organizations' commuting patterns and locations. This information can help identify thoroughfares that can be strengthened to support the industry. For example, the main Level 1 trauma center hospitals in the Wichita area are Ascension Via Christi St. Francis and Wesley Medical Center, both located in Downtown Wichita.

The healthcare industry has seen growth in terms of establishments, revenues, and wages at a national level. However, the market remains highly competitive, with only one company holding over 1% of the market share. Applying Michael Porter's five forces framework to the healthcare industry in the WAMPO region, it is evident that there are high capital requirements, government regulations, and proprietary technology, which pose barriers to new entrants. The threat of substitutes is low, and the bargaining power of buyers and suppliers is moderate. Rivalry among existing firms is high, driving competition, innovation, and efficiency in the industry.

Overall, the healthcare industry plays a vital role in the Wichita economy, serving as a major employer and a source of innovation and technology. It contributes significantly to the local, national, and global economy.

Industry Landscape

The following NAICS codes, provided by the Greater Wichita Partnership, constitute the category of Healthcare, which is a slightly more narrow focus of the traditional healthcare sector, excluding five sectors: residential care, individual services, community food and housing, vocational rehabilitation, and child care services These codes were used to extract specific industry data related to these subsections.

Healthcare		
NAICS	Description	Subsector
6211	Offices of Physicians	
6212	Offices of Dentists	
6213	Offices of Other Health Practitioners	
6214	Outpatient Care Centers	
6215	Medical and Diagnostic Laboratories	
6216	Home Health Care Services	
6219	Other Ambulatory Health Care Services	
6221	General Medical and Surgical Hospitals	
6222	Psychiatric and Substance Abuse Hospitals	
6223	Specialty (except Psychiatric and Substance Abuse) Hospitals	
6231	Nursing Care Facilities (Skilled Nursing Facilities)	
6232	Residential Intellectual and Developmental Disability, Mental Health, and Substance Abuse Facilities	
6233	Continuing Care Retirement Communities and Assisted Living Facilities for the Elderly	

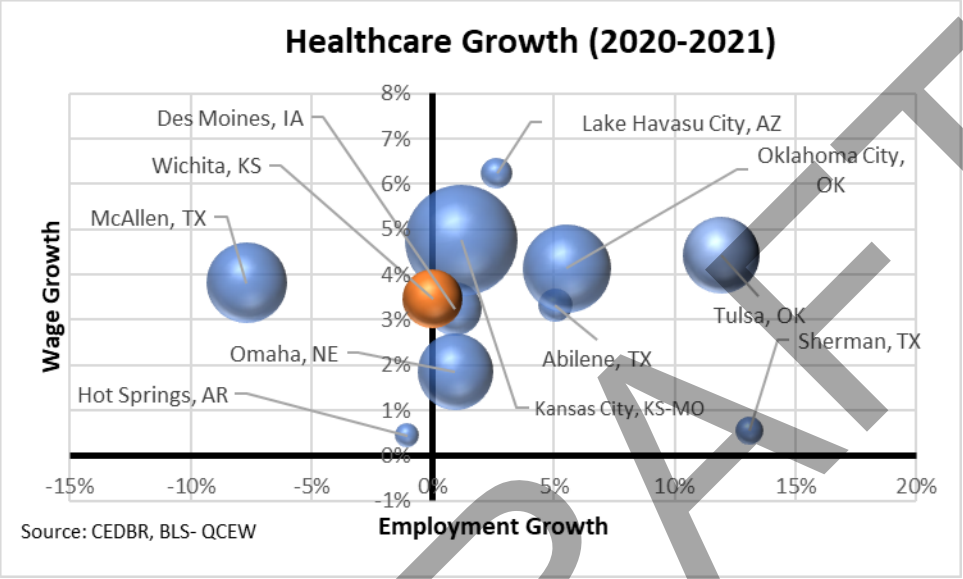
Key Healthcare Communities
Abilene, TX MSA
Des Moines- West Des Moines, IA MSA
Hot Springs, AR MSA
Kansas City, KS-MO MSA
Lake Havasu City-Kingman, AZ MSA
McAllen-Edinburg-Mission, TX MSA
Oklahoma City, OK MSA
Omaha-Council Bluff, NE-IA MSA
Sherman-Denison, TX MSA
Tulsa, OK MSA
Wichita, KS MSA

The comparison cities were selected based on the following criteria: employment concentration, size of the town, and preference for Midwest. Furthermore, all of the communities were vetted with the Greater Wichita Partnership as communities that the Wichita area competes within the respective sector.

In order to capture the broad industry landscape and recent competitiveness of the aerospace manufacturing sector within the Wichita area, this study developed a growth matrix. The matrix captures the relative growth and size of the market compared to the selected comparable communities. Any city within the top right quadrant should be considered in a growth mode. Those in the bottom left quadrant are in declining sectors. The other two quadrants, bottom right and top left, identify economic weaknesses that must be addressed.

DRAFT

In terms of employment, Wichita was dwarfed by the nearby regions of Oklahoma City and Kansas City, as both are also significantly larger markets. Wichita did, however, see an increase in wages, indicating an effort to remain competitive in attracting and retaining labor. Tulsa exhibited the strongest wage and employment growth performance, with increases of 4% and 12%, respectively.



DRAFT

Labor

In terms of healthcare employment, Wichita, KS MSA, maintained a relatively steady level of jobs from 2015 to 2021. Starting at 30,741 jobs in 2015, the figures slightly fluctuated but remained within a similar range throughout the years. The numbers dipped to 30,386 jobs in 2016 but then increased to 30,555 jobs in 2017. From 2018 to 2019, there was a gradual rise, reaching 31,108 jobs in the latter year. However, the figures dropped slightly in 2020 to 30,749 jobs before showing a minor increase to 30,861 jobs in 2021. Overall, healthcare employment in Wichita experienced minimal changes during the period, with an annualized growth rate of 0%. Similarly, there was no significant growth or decline observed in 2021 compared to the previous year. These figures indicate a relatively stable healthcare job market in Wichita, suggesting a consistent demand for healthcare services in the region.

Source: CEDBR, BLS- QCEW

The healthcare sector encompasses various employment areas, with several notable sectors experiencing different levels of growth from 2015 to 2021. Among the largest employment sectors, there were mixed trends. Offices of physicians, which had 5,733 jobs in 2015, experienced a slight decline with an annualized growth rate of -2%. Similarly, offices of dentists saw a minimal increase, with a 1% annualized growth rate. However, offices of other health practitioners exhibited a steady growth rate of 5% annually, reaching 2,106 jobs in 2021. Outpatient care centers also experienced a positive growth rate of 2%, with 1,607 jobs in 2021. On the other hand, other ambulatory healthcare services saw a significant decline, with an annualized growth rate of -8% and a notable decrease of 38% in 2021 compared to the previous year. General medical and surgical hospitals remained relatively stable with a 0% annualized growth rate, while nursing care facilities showed a modest growth rate of 1%. Continuing care retirement communities, however, experienced a decline with a -9% annualized growth rate. These figures highlight the varied employment trends within the healthcare sector, indicating both areas of growth and areas facing challenges.

DRAFT

When analyzing the key occupations in the healthcare sector, the only careers for which Wichita had an above-average location quotient were license practical and licensed vocational nurses. It should be taken into consideration that this list of occupations is far from exhaustive, as it does not include healthcare administrators or physicians.

Key Occupations

Occupation	Wichita MSA Employment	US Employment
Home Health and Personal Care Aides	5,760	3,404,960
Licensed Practical and Licensed Vocational Nurses	1,420	538,310
Medical and Health Services Managers	880	372,030

Source: CEDBR: BLS, OES

A location quotient is a statistical measure used to compare the concentration or specialization of a particular industry or occupation in a specific geographic area relative to its concentration in a larger reference area, typically a region or a nation. It is calculated by dividing the proportion of employment in a specific industry or occupation in the target area by the proportion of employment in the same industry or occupation in the reference area, and then comparing the result to a value of one. A location quotient greater than 1 indicates a higher concentration of the industry or occupation in the target area compared to the reference area, suggesting specialization or a comparative advantage in that particular sector. Conversely, a location quotient of less than 1 indicates a lower concentration, less specialization in the industry or occupation in the target area.

2021 Labor Costs - Healthcare

Occupation (SOC code)	Mean Wage	10th Percentile Wage	90th Percentile Wage	Location Quotient
Medical and Health Services Managers(119111)	$105,740	$58,260	$167,320	0.92
Licensed Practical and Licensed Vocational Nurses(292061)	$49,740	$38,540	$60,740	1.12
Home Health and Personal Care Aides(311120)	$25,170	$18,000	$35,170	0.82

Source: CEDBR, BLS-OES

To summarize the labor conversation through the framework of this particular sector, it is important to consider where labor is commuting throughout the day. Therefore, a list of all organizations within this sector with 100 employees or more has been collected. With knowledge of these particular businesses' locations and workforce density, WAMPO can leverage this list to analyze what thoroughfares can be strengthened to propagate the industry.

Main WAMPO Thoroughfares

The two main Level 1 trauma center hospital campuses in the WAMPO region are Ascension Via Christi St. Francis and Wesley Medical Center. These hospitals are both located in Downtown Wichita. Wesley Medical Center has 760 beds and is located at Central & Hillside with main highway access stemming from I-35. Meanwhile, St. Francis has 421 beds and is located on Murdock & St. Francis, with its main highway access also coming from the I-35 corridor.

Secondary to the large number of healthcare offices throughout the district, it is easiest to analyze these through the framework of their distribution via ZIP code. Knowing how many doctor's offices are located in each area can inform the transportation planning needs for the economic development of the sector.

DRAFT

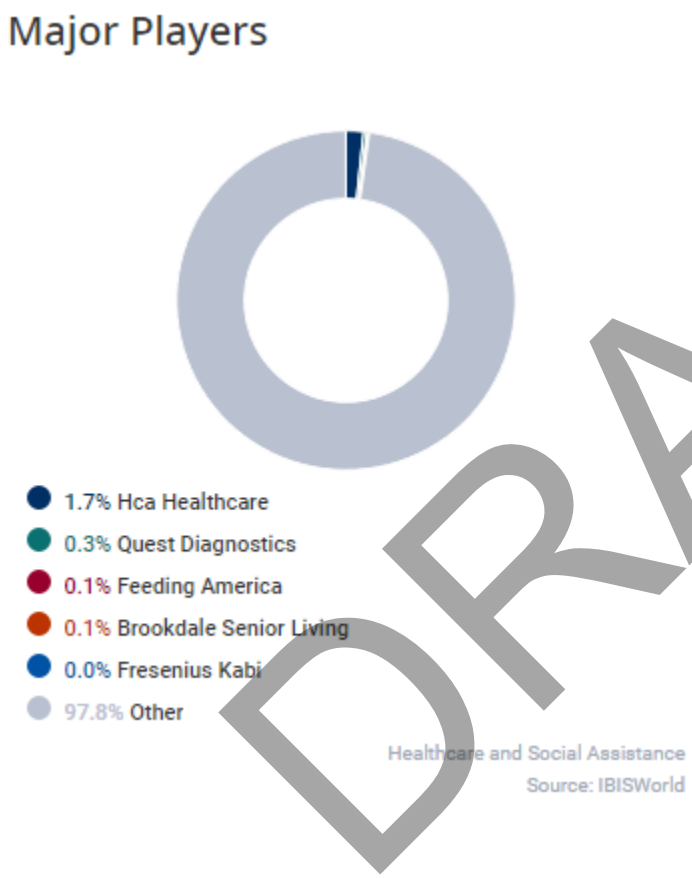
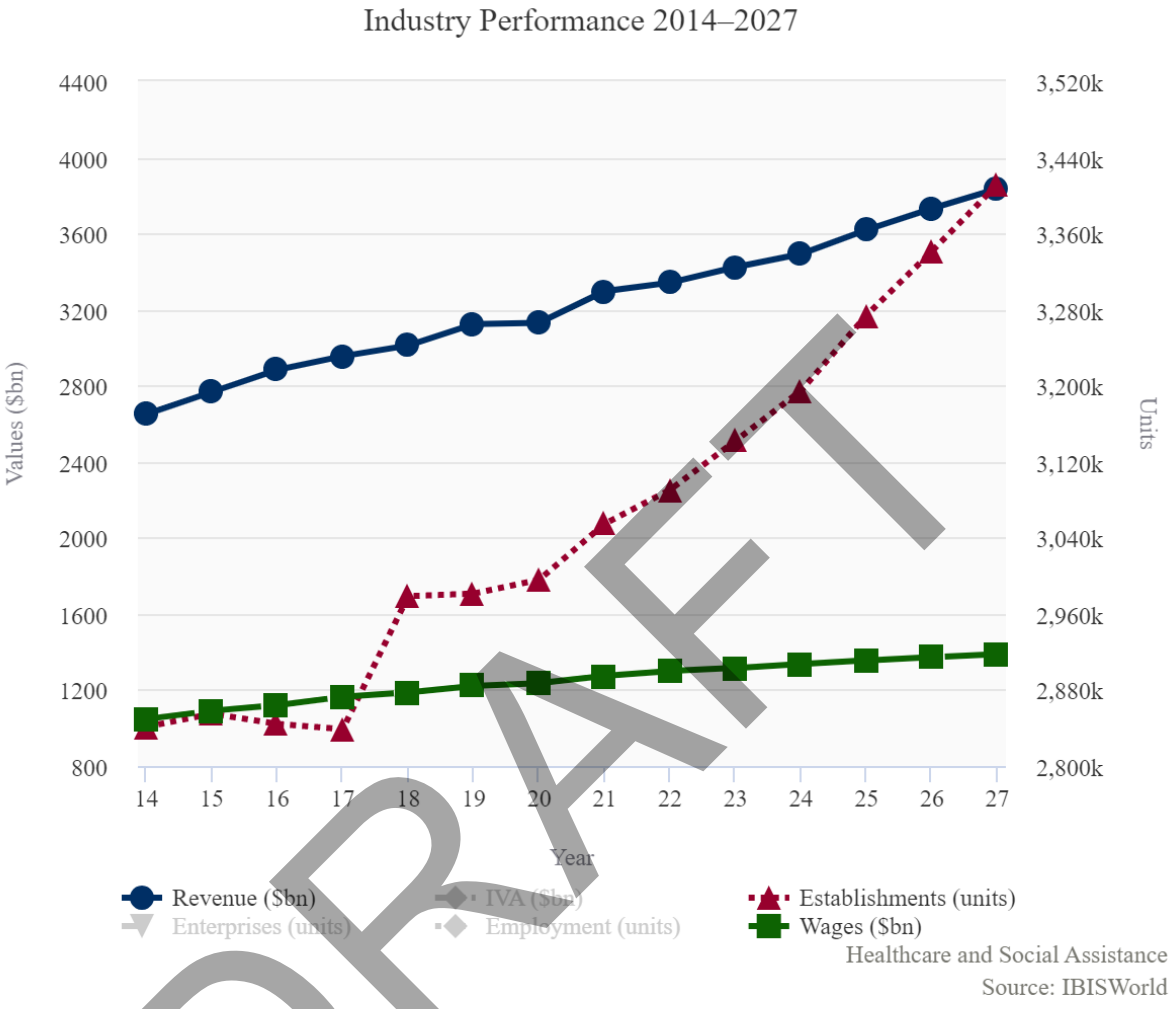
General US Trends

To assess the potential growth of the healthcare sector, this study examined five economic forces at the national level. Those broad economic conditions were then applied to the regional market, firms, and trends to provide the context of its economic competitiveness.

The healthcare industry has seen growth over the past decade in terms of total establishments, total revenues, and wages. However, the landscape remains highly competitive, as only one company produces over 1% of the market share.



DRAFT



DRAFT

Using the framework of Michael Porter's five forces, we can further detail the overall status quo of the Energy industry in the WAMPO region;

Threat of new entrants

- High capital requirements: The healthcare industry is capital-intensive, requiring large investments in research and development, manufacturing, and marketing. For example, the cost of developing a new drug can range from $1 billion to $10 billion.
- Government regulations: The healthcare industry is heavily regulated, making it difficult for new companies to comply with all the requirements. For example, the Food and Drug Administration (FDA) regulates the safety and efficacy of drugs and medical devices.

- Proprietary technology: The healthcare industry is characterized by proprietary technology, which gives existing companies a competitive advantage. For example, Pfizer has proprietary technology in the development of vaccines.

Threat of substitutes

- Low threat of substitutes: The threat of substitutes in the healthcare industry is low, as there are no close substitutes for healthcare services. For example, there is no other way to treat diseases or injuries.

Bargaining power of buyers

- Moderate bargaining power of buyers: The bargaining power of buyers in the healthcare industry is moderate, as there are a limited number of major buyers, such as health insurance companies and hospitals. However, buyers have some bargaining power, as they can choose to buy from other suppliers if they are unsatisfied with the price or quality of the products or services.

Bargaining power of suppliers

- Moderate bargaining power of suppliers: The bargaining power of suppliers in the healthcare industry is moderate, as there are a limited number of major suppliers, such as pharmaceutical companies, medical device companies, and healthcare providers. However, suppliers have some bargaining power, as they can choose to sell to other companies if they are unsatisfied with the price or volume of orders.

Rivalry among existing firms

- High rivalry among existing firms: The rivalry among existing firms in the healthcare industry is high, as a limited number of major companies compete for a share of the market. For example, two major hospital systems, Wesley and Ascension Via Christi, dominate the local healthcare landscape. These companies constantly compete for market share, which drives innovation and efficiency in the industry.

The healthcare industry in Wichita is a competitive industry, with a high level of rivalry among existing firms. The industry is also characterized by high barriers to entry, which make it difficult for new companies to enter the market. The threat of substitutes is low, as there are no close substitutes for healthcare services. The bargaining power of buyers and suppliers is moderate.

DRAFT

The healthcare industry is a vital part of the Wichita economy and a major employer in the area. The industry is also a source of innovation and technology, and it plays an important role in the national and global economy.

Introduction 2
Industry Landscape 3
Labor 4
Main WAMPO Thoroughfares 9
General US Trends 11

Introduction

This report provides an overview of the IT systems & support industry in the Wichita area, focusing on its broad industry landscape, labor dynamics, and general trends. The study also examines the economic forces at the national level to provide context for the region's economic competitiveness.

Wichita's IT systems & support industry encompasses sectors related to information, administrative services, and professional services. These sectors include data processing, cybersecurity, medical processing, and software/web development. While Wichita has seen an increase in the number of establishments dedicated to this sector, it lags behind in terms of wage growth and overall employment compared to Kansas City, which has the industry's largest employment and most competitive wage growth.

In terms of labor, Wichita experienced a mix of growth and challenges from 2015 to 2021. While there was a modest increase in employment with a 1% annualized growth rate, there was a decline of 7% in 2021 compared to the previous year. This indicates a challenging period for employment in this sector. However, certain sub-sectors within the industry showed resilience and growth, such as computing infrastructure providers, data, which experienced a 35% increase in 2021. Payroll Services remained stable, and other accounting showed steady growth.

To further support the industry, thoroughfares and infrastructure must be strengthened based on the locations and workforce density of organizations within the sector. Remote work trends, as demonstrated by Infosync, highlight the need for flexible labor access. In addition, firms like AT&T and Integra also require specific transportation access for their operations.

The IT systems & support landscape remains highly competitive at the national level, with consistent increases in wages, establishments, and revenues. The industry has moderate barriers to entry, a low threat of substitutes, and moderate bargaining power of buyers and suppliers. Rivalry among existing firms is high due to the industry's rapid growth and high demand for IT systems and support services.

Overall, the IT systems & support industry is a vital part of the Wichita economy, contributing to employment and innovation. However, there are challenges, such as declining employment in recent years. Stakeholders and industry professionals should monitor and address these factors to ensure sustained growth and development in the sector.

DRAFT

Industry Landscape

The following NAICS codes, provided by the Greater Wichita Partnership, constitute the IT systems & support category, which includes a sector form information, two from administrative services, and the remaining from professional services. This agglomeration of sectors represents the region's data processing, cybersecurity, medical processing, and software/web development.

Information Technology Systems & Support		
NAICS	Description	Subsector
518210	**Data Processing, Hosting, and Related Services**	**Digital Network Services & Cybersecurity**
541511	**Custom Computer Programming Services**	**Digital Network Services & Cybersecurity**
541512	**Computer Systems Design Services**	**Digital Network Services & Cybersecurity**
541513	**Computer Facilities Management Services**	**Digital Network Services & Cybersecurity**
541519	**Other Computer Related Services**	**Digital Network Services & Cybersecurity**
541214	Payroll Services	Business Process Outsourcing
541219	Other Accounting Services	Business Process Outsourcing
5611	Office Administrative Services	Business Process Outsourcing
5614	Business Support Services	Business Process Outsourcing

Key IT Systems & Support Communities
Amarillo, TX MSA
Boulder, CO MSA
Des Moines - West Des Moines, IA MSA
Greenville, NC MSA
Kansas City, KS-MO MSA
Oklahoma City, OK MSA
Omaha- Council Bluff, NE-IA MSA
San Angelo, TX MSA
St. Louis, MO-IL MSA
Tulsa, OK MSA
Wichita, KS MSA

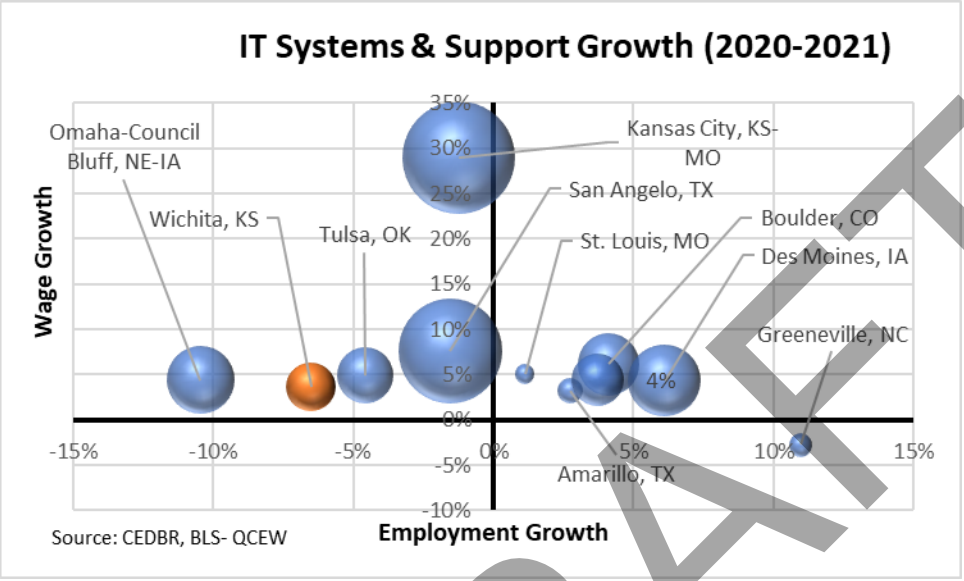
The comparison cities were selected based on the following criteria: employment concentration, size of the town, and preference for Midwest. Furthermore, all of the communities were vetted with the Greater Wichita Partnership as communities that the Wichita area competes within the respective sector.

DRAFT

In order to capture the broad industry landscape and recent competitiveness of the aerospace manufacturing sector within the Wichita area, this study developed a growth matrix. The matrix captures the relative growth and size of the market compared to the selected comparable communities. Any city within the top right quadrant should be considered in a growth mode. Those in the bottom left quadrant are in declining sectors. The other two quadrants, bottom right and top left, identify economic weaknesses that must be addressed.

In the IT systems and support industry, Wichita has seen a recent increase in the number of establishments dedicated to the sector and additionally saw employment growth. However, it lags in

both wage growth and overall employment, with Kansas City as a main labor competitor. Kansas City had the largest employment for this industry and the most competitive wage growth. The Kansas City market's size is largely due in part to the existence of firms like Garmin and Cerner. The anticipated expansion of Integra within the Wichita economy, along with a presumed increased demand for support labor, could transform the employment landscape of the IT systems & support sector.



Labor

In the IT Systems & Support sector, Wichita experienced a mix of growth and challenges from 2015 to 2021. Starting with 8,043 jobs in 2015, the sector saw a modest increase with a 1% annualized growth rate. However, in 2021, there was a decline of 7% compared to the previous year, with 8,530 jobs. This indicates a challenging period for IT systems & support employment in Wichita. Despite the decrease in recent years, the sector has shown some resilience and growth throughout the period. It is important for stakeholders and industry professionals to monitor and address the factors contributing to the decline to ensure the sector's sustained growth and development in Wichita.

Source: CEDBR, BLS- QCEW

The IT systems & support sector is comprised of various sub-sectors, and among them, the three largest sectors based on employment are computing infrastructure providers, data (137 jobs in 2021), payroll services (256 jobs in 2021), and other accounting (1,086 jobs in 2021). These sectors have shown different growth patterns during the period from 2015 to 2021. Computing infrastructure providers, data experienced a 1% annualized growth, with a significant increase of 35% in 2021 compared to the previous year. Payroll services remained relatively stable with no growth, maintaining 256 jobs consistently from 2015 to 2021. Other accounting showed a steady 3% annualized growth rate. These sectors play a crucial role in supporting IT systems and providing essential services, such as managing computing infrastructure, processing payroll, and handling accounting functions for businesses. Continued focus on innovation and adaptability in these sectors will be essential to meet the evolving technological needs of businesses and ensure their sustained growth.

DRAFT

Wichita had an above-average location quotient for customer service representatives. As these individuals are a large component of the supply chain for the IT systems and support industry, leveraging their competency will be pivotal in addressing Wichita's economic development in this sector.

Key Occupations

Occupation	Wichita MSA Employment	US Employment
Customer Service Representatives	7,400	128,760
Telecommunications Equipment Installers and Repairers, Except Line Installers	300	109,720

Source: CEDBR: BLS, OES

A location quotient is a statistical measure used to compare the concentration or specialization of a particular industry or occupation in a specific geographic area relative to its concentration in a larger reference area, typically a region or a nation. It is calculated by dividing the proportion of employment in a specific industry or occupation in the target area by the proportion of employment in the same industry or occupation in the reference area, and then comparing the result to a value of one. A location quotient greater than 1 indicates a higher concentration of the industry or occupation in the target area compared to the reference area, suggesting specialization or a comparative advantage in that particular sector. Conversely, a location quotient of less than 1 indicates a lower concentration, less specialization in the industry or occupation in the target area.

2021 Labor Costs - IT Systems & Support

Occupation (SOC code)	Mean Wage	10th Percentile Wage	90th Percentile Wage	Location Quotient
Customer Service Representatives(434051)	$36,470	$25,370	$48,450	1.28
Telecommunications Equipment Installers and Repairers, Except Line Installers(492022)	$55,030	$36,960	$74,110	0.89

Source: CEDBR, BLS-OES

Another component of the labor discussion is the skills, knowledge, and abilities required for the sector of the workforce. The most important skills in the IT systems and support sector were oral comprehension and expression. The most essential knowledge components were computers and electronics and English language. The most important abilities were reading comprehension and active listening.

DRAFT

To summarize the labor conversation through the framework of this particular sector, it is important to consider where the workforce is commuting throughout the date. Therefore, a list of all organizations within this sector with 100 employees or more has been collected. With knowledge of these particular businesses' locations and workforce density, WAMPO can leverage this list to analyze what thoroughfares can be strengthened to propagate the industry.

Key WAMPO players

Company Name	Location Employee Size
Infosync Services	500
Cox Communications	175
T-Mobile Call Ctr	175
High Touch Technologies	150
Sodexo	130

Source: CEDBR, Data Axle

Main WAMPO Thoroughfares

Infosync, a large IT support & systems employer, demonstrates the growing trend of remote work, as many of its job offerings are for remote positions. The main labor access point for the headquarters is via Woodlawn and Rockhill Ln.

DRAFT

Meanwhile, an important firm to consider for the sector is AT&T, as its infrastructure component is key to the operation of the economy as a whole. While the building's location at Lincoln and George Washington Blvd. hosts its labor force, there is a demand for access for its light freight and utility vehicles.

DRAFT

It is additionally important to consider the entrance of Integra, as its expected robust larbor force will have a high demand for access along the US-254 and Rock Rd corridor. Both inbound and outbound goods are expected to have demand for heavy highway, light freight, and air transportation.

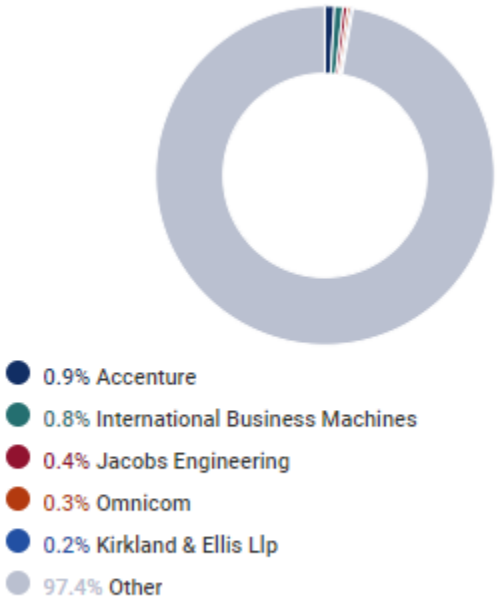
General US Trends

To assess the potential growth of the IT systems & support sector, this study examined five economic forces at the national level. Those broad economic conditions were then applied to the regional market, firms, and trends to provide the context of its economic competitiveness.

The IT systems & support landscape remains highly competitive, as no firms produce 1% of the market share. However, wages, establishments, and revenues have risen consistently and are expected to continue to increase.

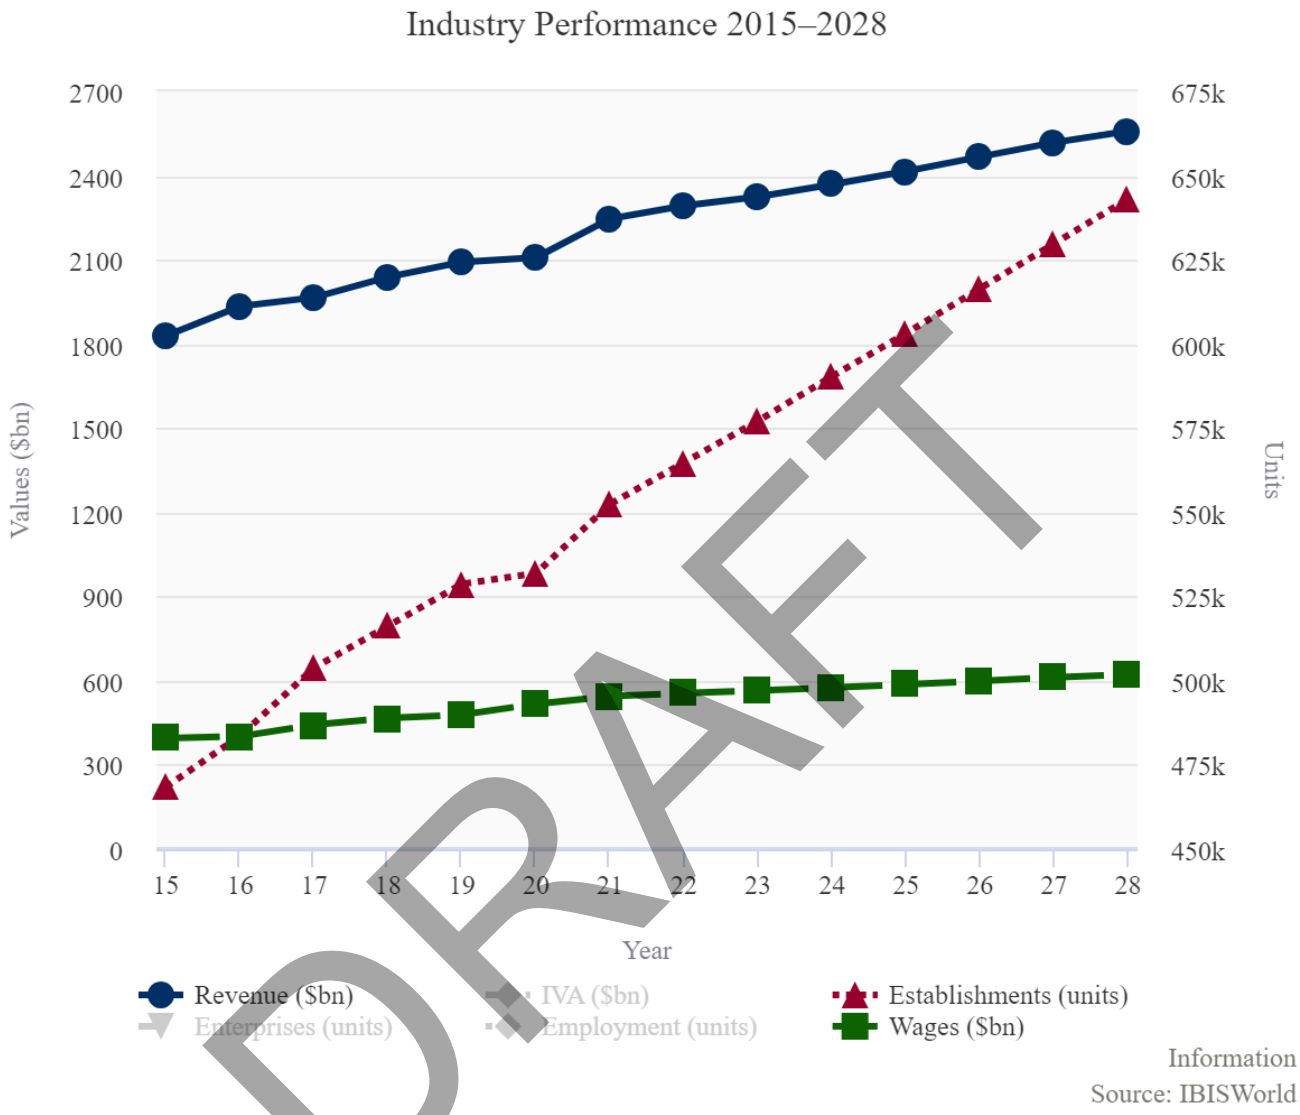
DRAFT

Major Players



Professional, Scientific and Technical Services
Source: IBISWorld

DRAFT



DRAFT

Threat of new entrants

- Moderate barriers to entry: The IT Systems & Support industry is not heavily regulated, and there are no significant capital requirements. However, a certain level of expertise and experience is required to enter the market.

Threat of substitutes

- Low threat of substitutes: There are no close substitutes for IT systems and support services. Businesses need these services to keep their IT systems running smoothly and securely.

Bargaining power of buyers

- Moderate bargaining power of buyers: There are a large number of businesses that need IT systems and support services, so buyers have some bargaining power. However, the bargaining power of buyers is limited by the fact that they need these services to operate their businesses.

Bargaining power of suppliers

- Moderate bargaining power of suppliers: There are a large number of IT systems and support providers, so suppliers have some bargaining power. However, the bargaining power of suppliers is limited by the fact that businesses need these services to operate their businesses.

Rivalry among existing firms

- High rivalry among existing firms: The IT Systems & Support industry is highly competitive, with a large number of companies competing for a share of the market. The competivieness is due to the fact that the industry is growing rapidly and there is a high demand for IT systems and support services.

The IT Systems & Support industry in Wichita is competitive with a high level of rivalry among existing firms. The industry is also characterized by moderate barriers to entry, a low threat of substitutes, and moderate bargaining power of buyers and suppliers.

The IT Systems & Support industry is a vital part of the Wichita economy, and it is a major employer in the area. The industry is also a source of innovation and technology and plays an important role in the national and global economy.

Introduction

The transportation industry in Wichita is a significant sector that includes various logistics sectors within wholesale and selected sectors within the traditional transportation NAICS sector. The industry landscape was analyzed using a growth matrix, which identified cities in growth mode, declining sectors, and economic weaknesses.

Wichita had strong growth in employment and wages, ranking eighth in total employment but among the top cities with substantial growth. The labor discussion highlighted the employment growth rates, with Wichita exceeding most comparison metro areas except for Flint and Spartanburg.

When examining the transportation sector components, motor vehicle and motor vehicle parts, lumber, and other construction materials experienced consistent employment growth. However, some sectors faced challenges, such as petroleum and petroleum products, which saw a decline in employment. Miscellaneous nondurable goods reported negative growth rates, while warehousing and storage demonstrated significant growth. The key occupations in the transportation industry showed that Wichita had a lower-than-average location quotient for airline pilots, copilots, flight engineers, and heavy and tractor-trailer truck drivers, indicating some supply chain concerns. Productivity within the transportation sector showed consistent technology improvements, leading to increased value added per worker.

The list of organizations within the sector with 100 or more employees provided insights into workforce commuting patterns, emphasizing the importance of analyzing thoroughfares to support industry growth. Specific examples, such as Barry Manufacturing, demonstrated the need for interconnectedness and considerations of use cases in transportation planning.

The analysis of the industry's competitive forces revealed moderate barriers to entry, a moderate threat of substitutes, a moderate bargaining power of buyers, and a moderate bargaining power of suppliers. However, there is high rivalry among existing firms due to the rapid growth and high demand for transportation services in Wichita.

Industry Landscape

The following NAICS codes, provided by the Greater Wichita Partnership, constitute the " Transportation " category, which includes some of the logistics sectors within wholesale and selected sectors within the traditional transportation NAICS sector. These codes were used to extract specific industry data related to these subsections.

Transportation & Logistics		
NAICS	Description	Subsector
4821	Rail Transportation	Transportation
4841	General Freight Trucking	Transportation
4842	Specialized Freight Trucking	Transportation
4882	Support Activities for Rail Transportation	Transportation
4884	Support Activities for Road Transportation	Transportation
4885	Freight Transportation Arrangement	Transportation
4889	Other Support Activities for Transportation	Transportation
4231	**Motor Vehicle and Motor Vehicle Parts and Supplies Merchant Wholesalers**	**Logistics**
4233	**Lumber and Other Construction Materials Merchant Wholesalers**	**Logistics**
4235	**Metal and Mineral (except Petroleum) Merchant Wholesalers**	**Logistics**
4236	**Household Appliances and Electrical and Electronic Goods Merchant Wholesalers**	**Logistics**
4237	**Hardware, and Plumbing and Heating Equipment and Supplies Merchant Wholesalers**	**Logistics**
4238	**Machinery, Equipment, and Supplies Merchant Wholesalers**	**Logistics**
4239	**Miscellaneous Durable Goods Merchant Wholesalers**	**Logistics**
4245	**Farm Product Raw Material Merchant Wholesalers**	**Logistics**

4247	**Petroleum and Petroleum Products Merchant Wholesalers**	**Logistics**
4248	**Beer, Wine, and Distilled Alcoholic Beverage Merchant Wholesalers**	**Logistics**
4249	**Miscellaneous Nondurable Goods Merchant Wholesalers**	**Logistics**
4931	**Warehousing and Storage**	**Logistics**
541614	**Process, Physical Distribution, and Logistics Consulting Services**	**Logistics**

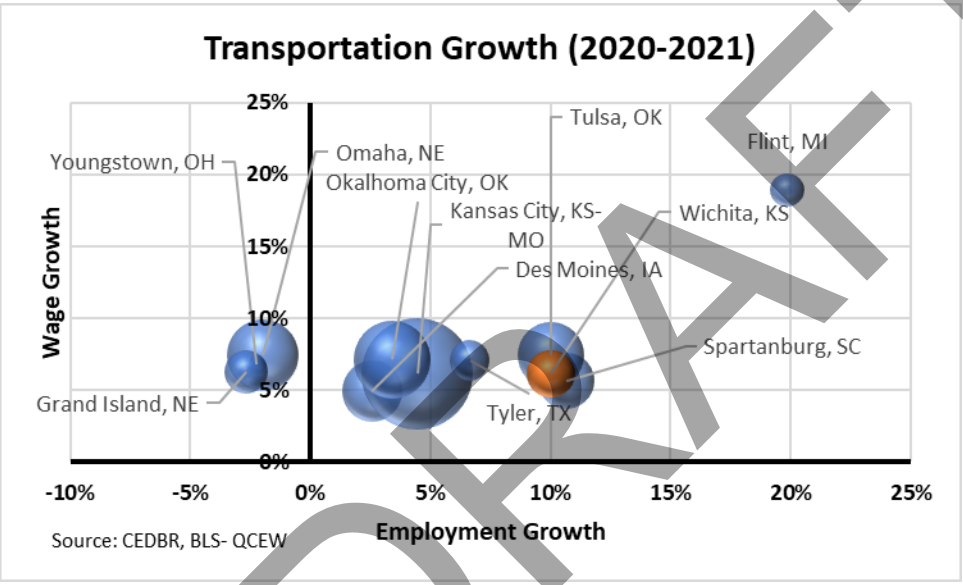
DRAFT

Key Transportation Communities
Des Moines - West Des Moines, IA MSA
Flint, MI MSA
Grand Island, NE MSA
Kansas City, KS-MO MSA
Oklahoma City, OK MSA
Omaha - Council Bluff, IA MSA
Spartanburg, SC MSA
Tulsa, OK MSA
Tyler, TX MSA
Youngstown-Warren-Boardman, OH-PA MSA

The comparison cities were selected based on the following criteria: employment concentration, size of the town, and preference for Midwest. Furthermore, all of the communities were vetted with the Greater Wichita Partnership as communities that the Wichita area competes within the respective sector.

In order to capture the broad industry landscape and recent competitiveness of the aerospace manufacturing sector within the Wichita area, this study developed a growth matrix. The matrix captures the relative growth and size of the market compared to the selected comparable communities. Any city within the top right quadrant should be considered in a growth mode. Those in the bottom left quadrant are in declining sectors. The other two quadrants, bottom right and top left, identify economic weaknesses that must be addressed.

Although Wichita had the eighth largest market in terms of total employment, it was among a select few with overall strong growth in employment and wages over the past year. In 2021, the Wichita area had 7,630 jobs, an overall employment growth rate of 10%, and wage growth of over 5%. Three markets had similar or more robust growth: Flint, Oklahoma, and Spartanburg.



DRAFT

Labor

The selected region's annualized employment growth rate from 2015 to 2021 was 3.8%, whereas Wichita grew by 1.2%. Only two communities grew slower than Wichita: Youngstown and Grand Island. Regarding recent growth, however, Wichita far exceeded the comparison metro areas apart from two locations: Flint and Spartanburg grew faster.

Transportation Employment

	2015	2016	2017	2018	2019	2020	2021	Annualized growth 2015-21	Annualized growth 2020-21

Source: CEDBR, BLS- QCEW

When breaking down the Transportation sector into its components, the motor vehicle and motor vehicle parts sector exhibited a consistent increase in employment, with a 5% growth from 2020 to 2021 and a 1% annualized growth from 2015 to 2021. Lumbe and other construction materials also experienced positive growth, with a 4% increase both in 2020-2021 and overall. However, certain sectors faced challenges, such as petroleum and petroleum products, which saw a decline of 6% in employment from 2020 to 2021. In addition, despite the overall positive trend, some sectors, like miscellaneous and nondurable goods, reported negative growth rates. On the other hand, warehousing and storage demonstrated significant growth, with a remarkable 71% increase in employment from 2020 to 2021, indicating its growing importance within the transportation industry.

Souce: CEDBR, BLS - QCEW							

Of the key occupations in the transportation industry, Wichita had a lower-than-average location quotient in both the categories of Airline Pilots, Copilots, and Flight Engineers, as well as Heavy and Tractor-Trailer Truck Drivers. While the weak location quotient for pilots is likely due in part to Dwight D. Eisenhower Aiport not being a central airline hub, the low location quotient for Heavy and Tractor-Trailer Truck Drivers is something to take into account when discussing the overall supply chain between all the sectors.

Key Occupations		
Occupation	Wichita MSA Employment	US Employment
Airline Pilots, Copilots, and Flight Engineers	40	83,490
Bus Drivers, School	1,310	
Heavy and Tractor-Trailer Truck Drivers	3,630	1,152,570

Source: CEDBR: BLS, OES

2021 Labor Costs - Transportation				
Occupation (SOC code)	Mean Wage	10th Percentile Wage	90th Percentile Wage	Location Quotient
Airline Pilots, Copilots, and Flight Engineers(532011)	$125,330	$100,210	$155,460	0.24
Heavy and Tractor-Trailer Truck Drivers(533032)	$49,220	$32,820	$67,360	0.91
Bus Drivers, School(533051)	$40,750	$29,820	$44,630	1.78
Source: CEDBR, BLS-OES				

A location quotient is a statistical measure used to compare the concentration or specialization of a particular industry or occupation in a specific geographic area relative to its concentration in a larger reference area, typically a region or a nation. It is calculated by dividing the proportion of employment in a specific industry or occupation in the target area by the proportion of employment in the same industry or occupation in the reference area, and then comparing the result to a value of one. A location quotient greater than 1 indicates a higher concentration of the industry or occupation in the target area compared to the reference area, suggesting specialization or a comparative advantage in that particular sector. Conversely, a location quotient of less than 1 indicates a lower concentration, less specialization in the industry or occupation in the target area.

DRAFT

Productivity is an important component of the labor discussion. Using national figures, the following list of occupations has been detailed for the transportation sector, where productivity is compared against the base year 2012. Those sectors with increasing productivity, as represented by rates above 100, are growing and have the opportunity for increased wages and profitability.

Of the fifteen subsectors within transportation, only two had declining productivity rates. Overall, this sector has seen consistent technology improvements that have increased the value added per worker.

Transportation Productivity

Industry	2010	2011	2012	2013	2014	2015	2016	2017	2018	2019	2020	2021

DRAFT

To summarize the labor conversation through the framework of this particular sector, it is essential to consider where the workforce is commuting throughout the day. Therefore, a list of all organizations within this sector with 100 employees or more has been collected. With knowledge of these particular businesses' locations and workforce density, WAMPO can leverage this list to analyze what thoroughfares can be strengthened to propagate the industry.

DRAFT

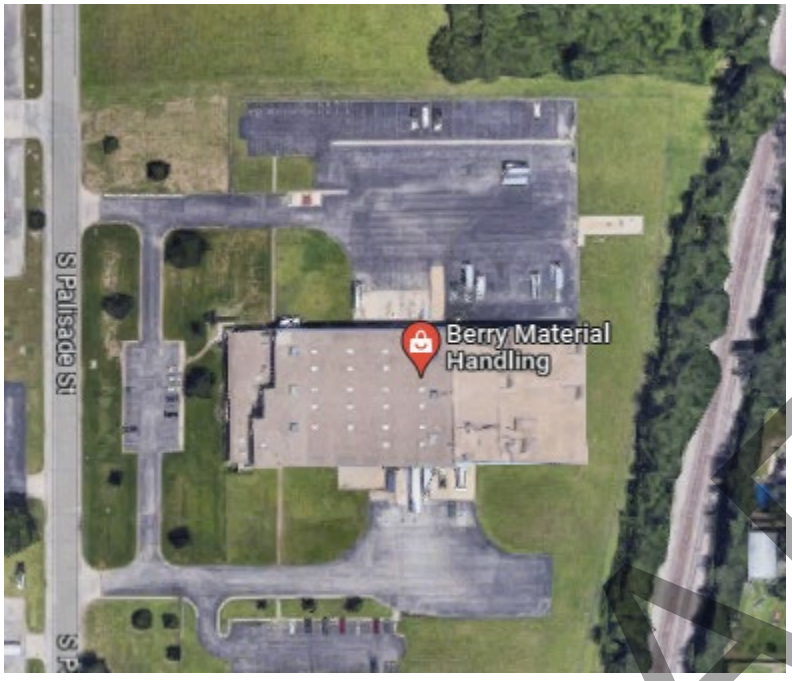
Main WAMPO Thoroughfares

Berry Manufacturing is a large player in the WAMPO region as a large equipment distributor. With three different campuses across the Wichita area, the diaspora of the company is a prime example of the need for interconnectedness throughout the region. Each campus has different demands on the transportation system, but each is a component of the firm's operations. The retail center near West & Kellogg has demands for heavy highway and trailers that will be able to accommodate the movement of heavy equipment. The Berry Material Handling location near 47th St. & Broadway Ave is a mixed-use facility, with both inbound goods and outbound goods utilizing heavy highway and light freight along needs for access for its labor force. Meanwhile, the main office off of 37th St. is mostly a location with demand solely for labor access.

This reiterates the importance of considering use cases when analyzing the broader industry, as transportation planning can affect both distribution channels and labor access. Many other firms

supplying the transportation sector with equipment and supplies will have varying demands on the transportation system depending upon their supply chain offerings.



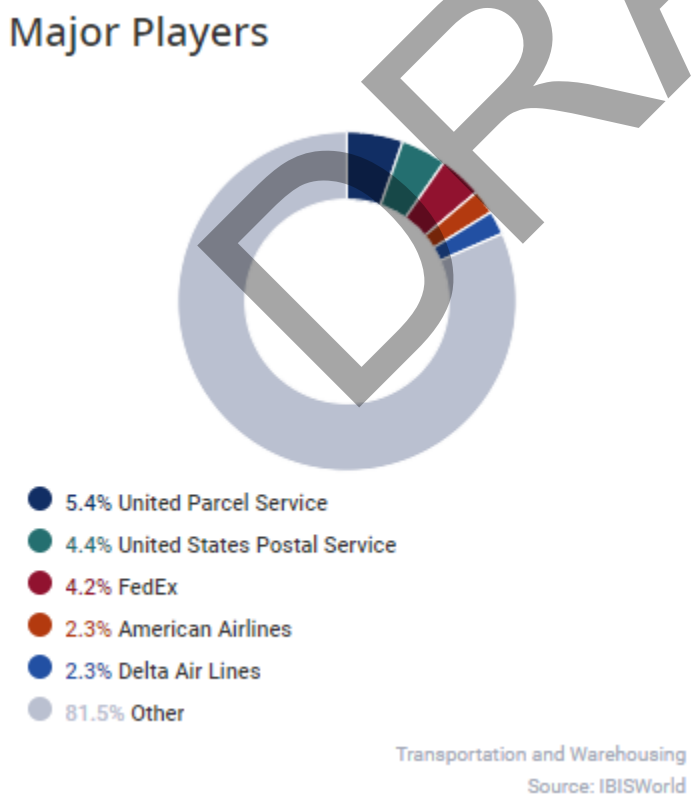
DRAFT

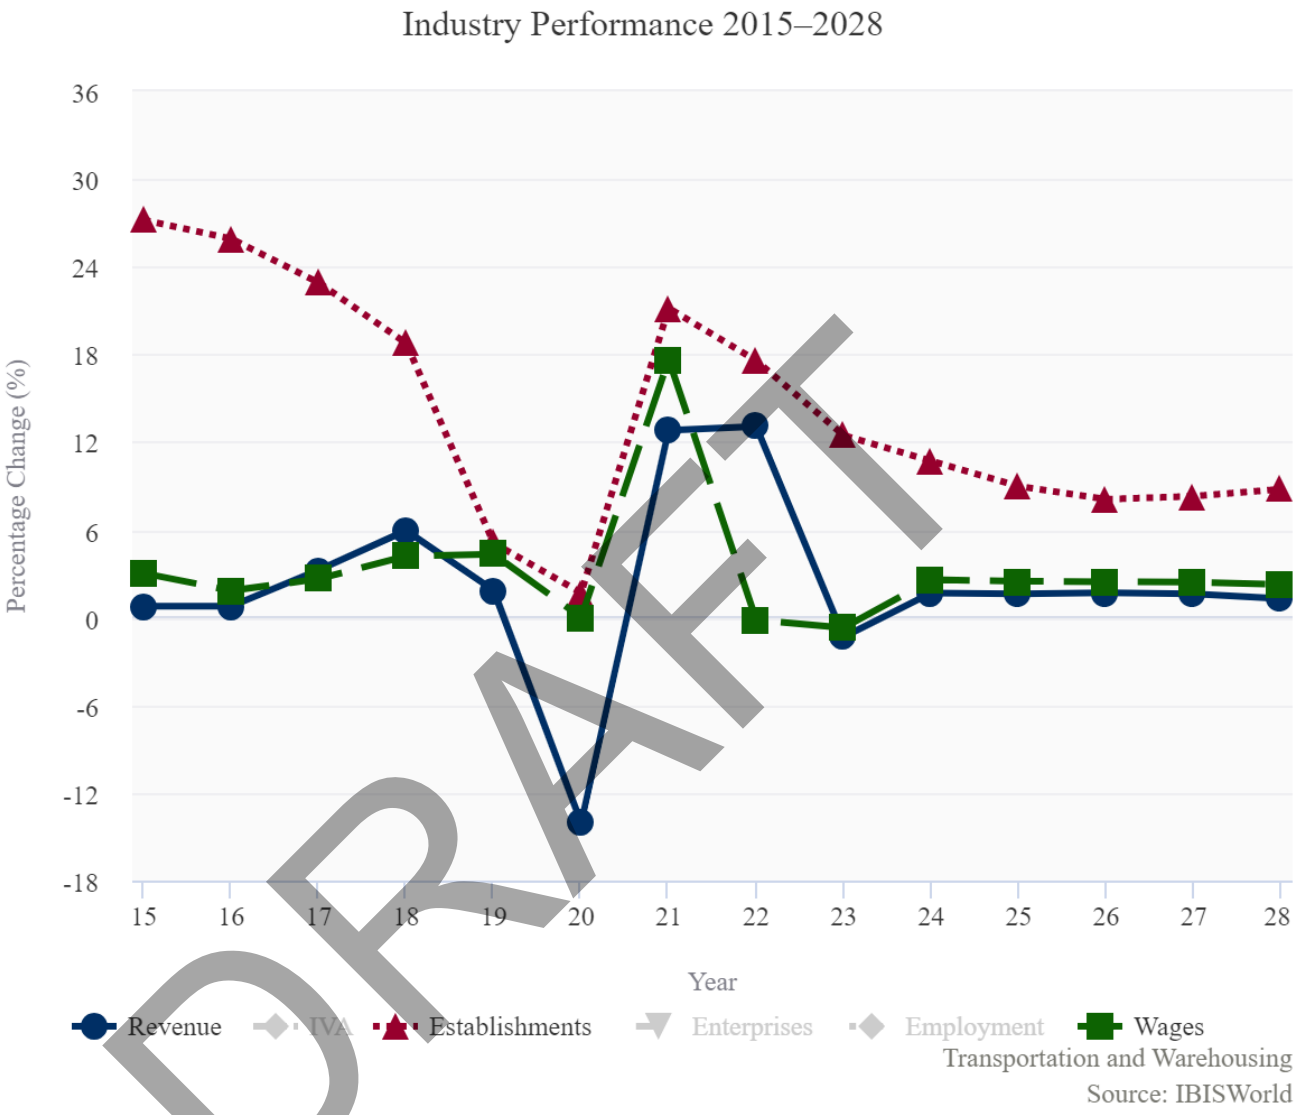
General US Trends

To assess the potential growth of the transportation sector, this study examined five economic forces at the national level. Those broad economic conditions were then applied to the regional market, firms, and trends to provide the context of its economic competitiveness.

The transportation industry has several major players, such as UPS, USPS, and FedEx. The COVID-19 pandemic heavily impacted the industry, but wages, revenues, and establishments are expected to rebound and continue to increase over the coming years.

DRAFT





DRAFT

Threat of new entrants

- Moderate barriers to entry: The transportation industry in Wichita is not heavily regulated, and there are no significant capital requirements. However, a certain level of expertise and experience is required to enter the market, such as knowledge of the local market and the ability to obtain the necessary permits and licenses. For example, a new company could enter the transportation industry in Wichita by starting a taxi company, a bus company, or a ride-hailing service. However, this would require a significant investment in vehicles, drivers, and marketing.

Threat of substitutes

- Moderate threat of substitutes: There are some close substitutes for transportation services in Wichita, such as walking, biking, and public transportation. However, these substitutes are not always practical or available for all trips. For example, walking or biking may not be feasible for long distances or in inclement weather. Public transportation is also limited in Wichita, with only a few bus lines and no light rail or subway system.

Bargaining power of buyers

- Moderate bargaining power of buyers: There are a large number of businesses and individuals who need transportation services in Wichita, so buyers have some bargaining power. However, the bargaining power of buyers is limited by the fact that they need these services to get around. For example, businesses may not operate without reliable transportation for their employees, and individuals may not get to work or school without a car.

Bargaining power of suppliers

- Moderate bargaining power of suppliers: There are a large number of transportation providers in Wichita, so suppliers have some bargaining power. However, the bargaining power of suppliers is limited by the fact that businesses and individuals need these services to get around. For example, if a taxi company raises its prices, businesses and individuals may simply switch to another taxi company.

Rivalry among existing firms

- High rivalry among existing firms: The transportation industry in Wichita is highly competitive, with a large number of companies competing for a share of the market. This is due to the fact that the industry is growing rapidly, and there is a high demand for transportation services. For example, the number of people living in Wichita is expected to grow by 10% over the next five years, which will create a need for more transportation services.

The transportation industry in Wichita is competitive, with a high level of rivalry among existing firms. The industry is also characterized by moderate barriers to entry, a moderate threat of substitutes, and moderate bargaining power of buyers and suppliers.

The transportation industry is a vital part of the Wichita economy and a major employer in the area. The industry is also a source of innovation and technology and plays an important role in the movement of people and goods.

The transportation industry is a major economic force in Wichita and a major employer in the area. The industry is important for the movement of people and goods, and it is also a source of innovation and technology.

WAMPO Region Labor Mobility Report

DRAFT

March 2023

Transportation plays a critical role in connecting people to job opportunities. If workers can access jobs more efficiently, they may be more likely to find employment, increasing their income and contributing to overall economic growth. Therefore, optimizing transportation options can expand the geographic reach of the labor market. Workers may be able to commute longer distances or work remotely, increasing the pool and leading to more efficient labor allocation.

Another way to think about how transportation impacts the labor market is through an effective real wage, which factors in commuting costs. The more efficient the overall system is, it will translate into either an increased take-home pay or an increased distance and labor pool for the firm to hire from. Given the tight labor market, any increase in labor availability will increase regional competitiveness.

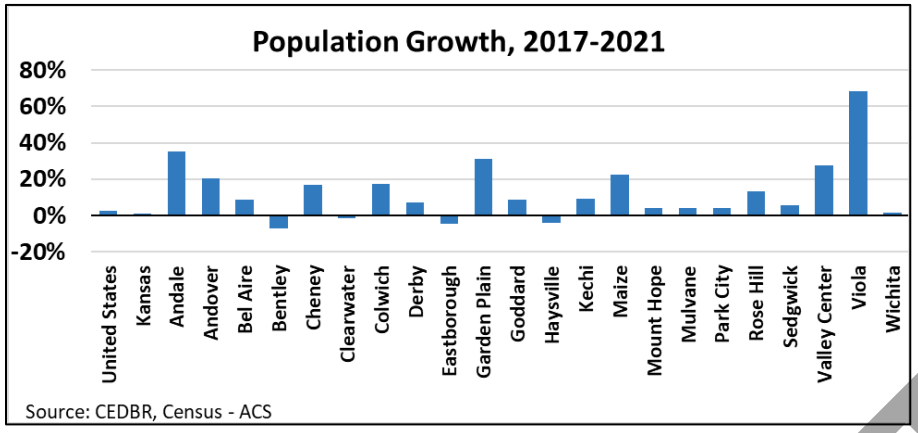
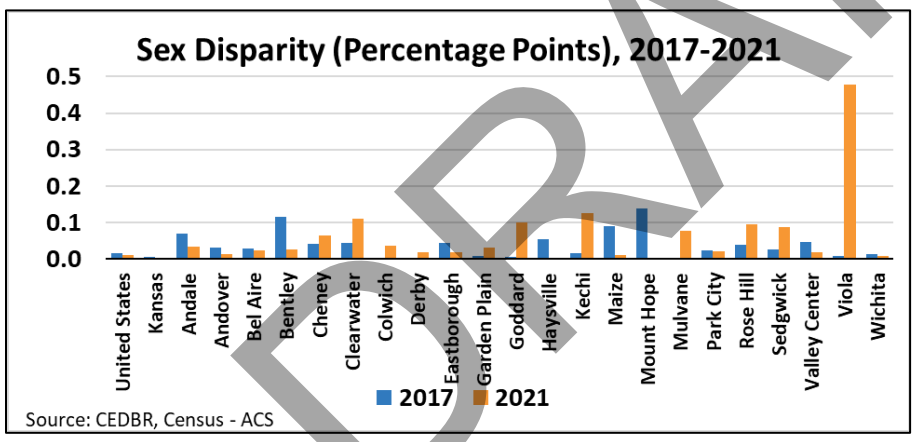
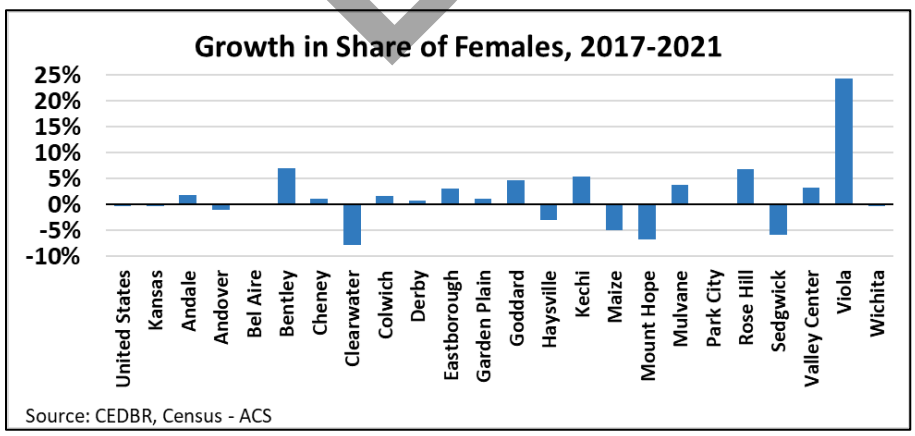
Source: CEDBR, Census - ACS						

The five most populated towns and cities in the WAMPO region in 2021 were, in order, Wichita, Derby, Andover, Haysville, and Valley Center, with a combined population of 448,633, representing 15.5% of the state's population of the same year. At the state level, there is a near-even ratio of males to females in 2021, a figure which has decreased in disparity by 0.4 percentage points over the past five years. Broadly, the WAMPO region followed the same trend, though outliers exist, detailed in the charts below.



Population growth is a vital transportation factor to consider, as it could lead to traffic congestion, demand for public transportation, increased infrastructure, and changes in commuting patterns. Populations grew in most communities, excluding Bentley, Eastborough, and Haysville. As a share of its local population, Viola experienced the fastest growth over the past five years, though it is the smallest of WAMPO communities and thus more prone to volatility in growth figures. Of the larger communities in the region, Valley Center and Maize experienced the fastest growth rates, exceeding 20% over the period. Across most of the area, however, populations grew faster than the state and national average.





DRAFT

The disparity in the population sex ratios (the absolute value difference in ratios) between males and females tended to be greater in magnitude and show greater volatility among smaller communities in the WAMPO region, though the driving factors behind these trends varied. Viola experienced the highest disparity and possessed the largest share of females in 2021. In Bentley, strong growth in the percentage of females resulted in a significant reduction. However, the opposite effect was seen in Mount Hope, where a significant drop in the share of females reduced the difference.

Age

Population Composition by Broad Age Group

Community	Younger than 18		18-64 Years		65 and Older	
	2017	2021	2017	2021	2017	2021

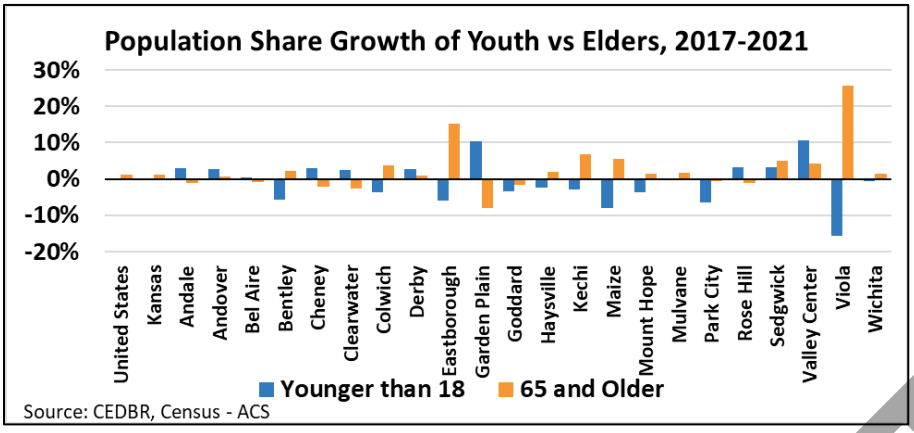
Wichita	24.7%	24.1%	62.0%	61.2%	13.3%	14.8%

Source: CEDBR, Census - ACS

The population's age distribution can significantly impact transportation needs, as the different cohorts have varying transportation requirements. For example, older adults may require more accessibility paratransit and on-demand ride services, while young adults are more likely to use public transportation, bikes, and walking paths. The WAMPO region possesses a diverse range of communities regarding their age characteristics and trends. The working age cohort, or those 18-64 years old, was lower than the state average in 19 of the region's 22 cities, though slightly higher in Wichita, representing the population majority. This age group's share of the population was lowest in Valley Center and Eastborough, which had representative shares of 13.3% and 10.1% lower than the 2021 state averages, respectively. The largest working age cohort in 2021 was Park City, at 4.1% higher than the state average.

DRAFT



Population age cohort trends further varied between youths and elders. The share of the population under age 18 grew most rapidly in Garden Plain and Valley Center, while the elder population share grew significantly in Viola and Eastborough. Most communities in the WAMPO region possessed a greater total non-working-age cohort compared to state and national levels – a potential risk within the labor market as the robustness of the workforce is a significant driver of economic activity. Interconnectivity of the labor markets of the WAMPO region somewhat mitigates this risk, allowing some communities to specialize as, for example, retirement communities with services more targeted to specific age groups.

*Hispanic or Latino Origin includes persons of any race

Source: CEDBR, Census - ACS

Race and ethnicity are important to consider within transportation, as equity, access, safety, and cultural preferences are a few items to consider. Overall, Kansas had lower racial diversity than national averages from 2017 to 2021, and most communities in the WAMPO region are less racially diverse than the state. The exceptions to this trend are Bel Aire, Park City, and Wichita, which each possessed lower shares of persons in the population who identify as white alone. Ethnic diversity is similarly trended, with typically a lower percentage of persons (of any race) identifying as of Hispanic or Latino origin than state and national values. Wichita, the largest city in the region, had the highest share of minorities across most groups. A notable trend, likely seen as a result of sample

DRAFT

size bias, was 28.5% of Viola's population in 2021 identifying as American Indian or Alaska Native, a jump from only 3.3% seen in 2017.

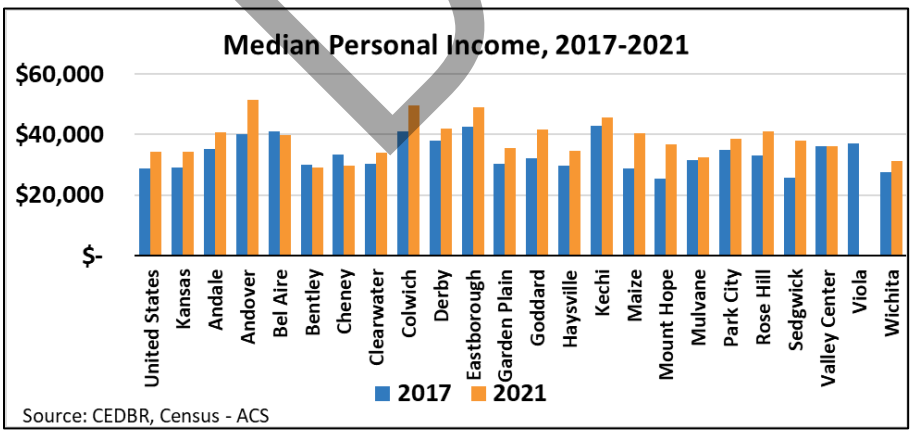
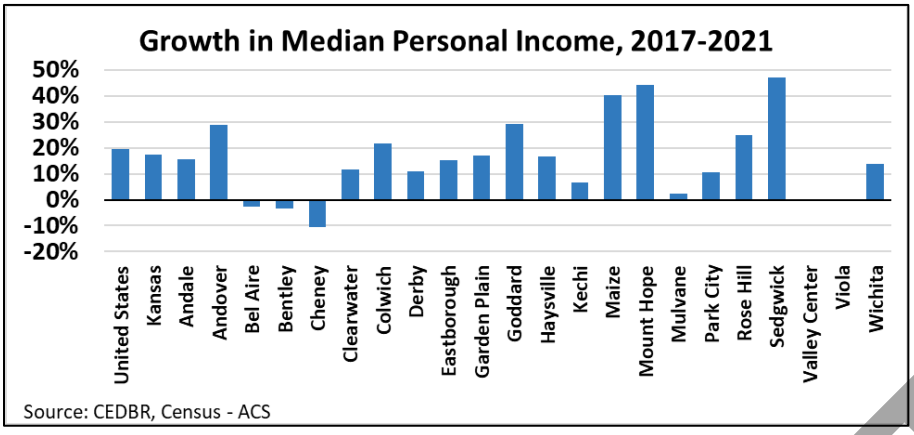
Source: CEDBR, Census - ACS																

Lower-income households tend to have higher needs for public transportation, longer commuting patterns, more vulnerability to affordability, and increased safety concerns. Understanding the distribution of householders by income provides a starting point for understanding the likely demand. Personal income in the region saw growth from 2017 to 2021, though at varying rates across different communities. The largest shares of the population with annual incomes of at least $75,000 were seen in Derby and Andover. Bel Aire, which has a more significant percentage of income earners making at least $75,000 annually, saw a decrease, a departure from the broader trend.



Median personal incomes were lowest in the Mount Hope and Sedgwick region in 2017 and Bentley, Cheney, and Wichita in 2021. The highest median personal income in 2021 in the WAMPO region was in Andover, at $51,577, 51% higher than the statewide average.

DRAFT



The fastest growth rates in median personal income from 2017 to 2021 were in Sedgwick, Mount Hope, and Maize, which all experienced greater than 40% growth over the five years. Personal incomes declined, however, in Bel Aire, Bentley, Cheney, and Valley Center.

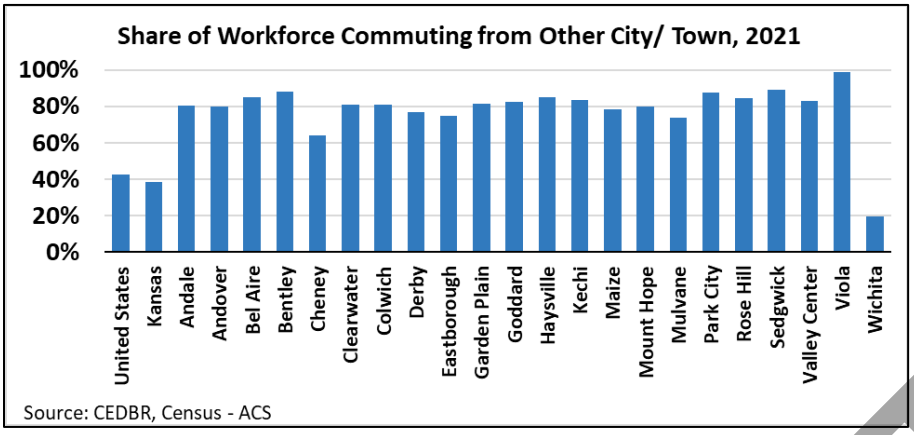
DRAFT



People's daily transportation habits and preferences can influence the design and availability of transportation services. Commuting to work impacts the transportation system by mode, time of day, routes, and future infrastructure development. Across every community in the WAMPO region, nearly the entire workforce resided in Kansas, and the vast majority resided in Sedgwick County. Shares of the workforce living in the same city or town as their job were dramatically lower across all communities except Wichita. As Wichita is the region's economic and labor hub, it still sources much of its labor locally. Only two of the WAMPO region's communities other than Wichita source more than a quarter of their workforces locally: Cheney, Mulvane, and six other communities sourced less than 15% of workers locally, the lowest being Viola at only 1.0% in 2021. The high interconnectedness of the WAMPO region means commutes across the city or county lines are common for large segments of the workforce. This necessitates robust transportation infrastructure to drive the local economies dependent on the larger regional economy.

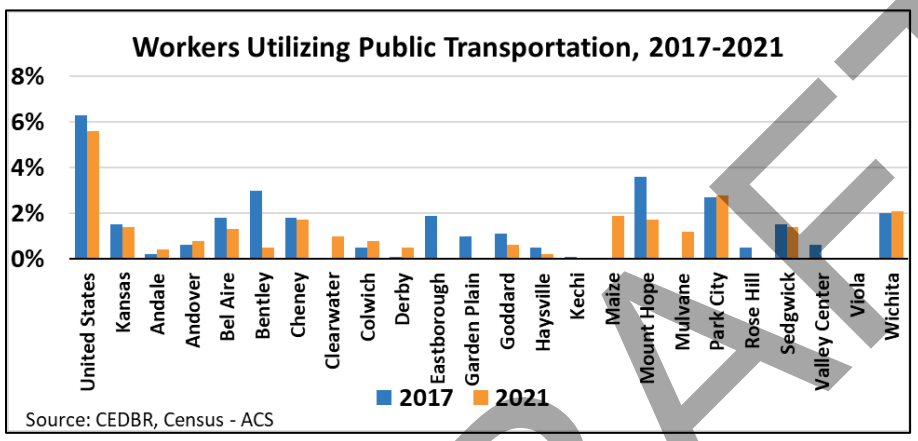
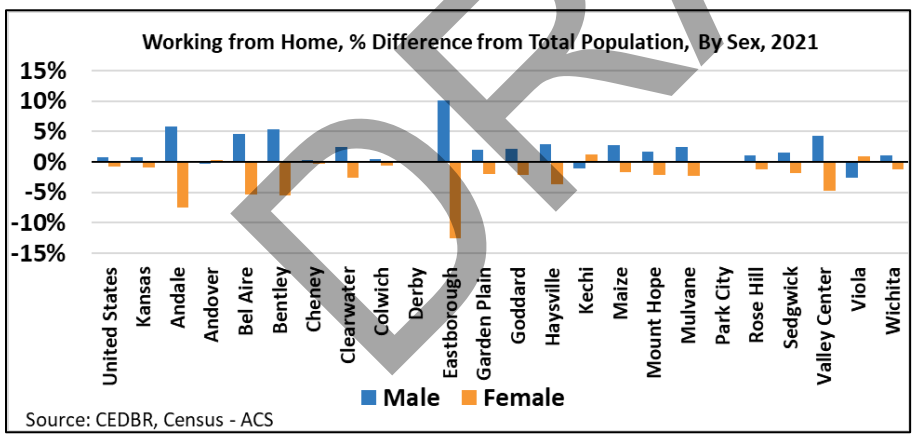
Source: CEDBR, Census - ACS

The means of use to travel to work in Kansas favor personal vehicles more heavily than national rates. The WAMPO region overall possessed an even greater share of workers who drove alone or carpooled. There is a highly-variable and typically lower utilization of bicycles or walking to work, driven by differences in the walkability and commute differences seen from one town to another, though the total utilization of public transportation services across the region exceeds state averages. The primary difference is due to the higher-than-average use of public transport in Wichita, Bentley, Mount Hope, and Park City; all communities in the region fall far below the public transport utilization rate nationally. The rate at which laborers perform their jobs from home has increased significantly in the past five years, much of the growth occurring post-2020 in the wake of the Coronavirus pandemic. Despite this significant growth in remote work utilization, only three communities have a larger share of workers who worked from home than the state average, and only two were higher than the national average in 2021.





DRAFT

The share of workers who work from home varies significantly from males to females. In the WAMPO region, only Kechi and Viola saw females working from home at a higher rate compared to the total population over their male counterparts. This suggests that men in the WAMPO region have a greater proclivity toward working from home than women, though this also depends on the types of present industries, as ones more receptive to having workers perform their duties remotely may have a more male-dominated labor force.

Source: CEDBR, Census - ACS										

Patterns with which transportation infrastructure is utilized depend on the times at which the labor force travels to work. In the WAMPO region, workers across different communities travel to work at different parts of the day. From midnight to 6 a.m., there is a high share of labor commutes in Cheney, Goddard, Haysville, and Mulvane. Late morning commutes from 9:00 to noon are most prevalent in Bentley, Eastborough, Kechi, Maize, and Wichita, all of which have higher fractions of labor commutes in this time range than state and national averages.

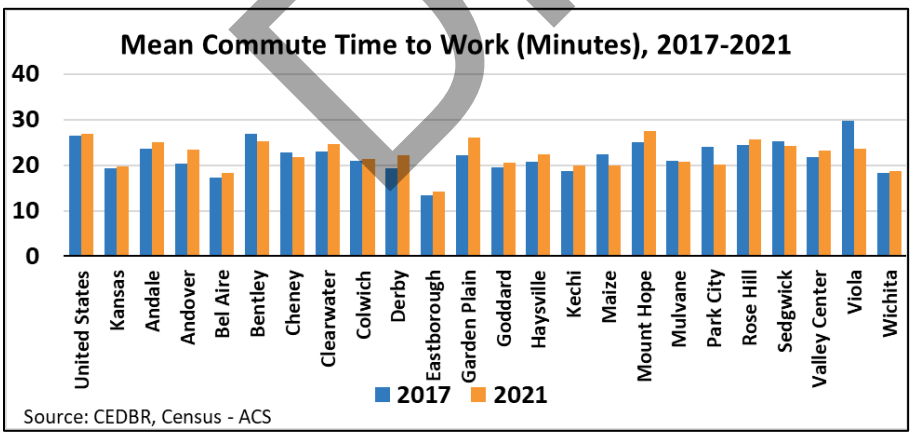
Due to its geographic characteristics, the Midwest is often attributed with a tendency toward long-distance, long-duration commutes. Despite this perception, Kansas and the WAMPO region trends are the opposite, with most commutes being more heavily concentrated in shorter trips than the national average. In addition, compared to the state average, the WAMPO region possesses more intermediate-duration trips, approximately half an hour.



The average commutes in the WAMPO region almost universally fall below the national average in both 2017 and 2021. However, most communities in the region have a higher mean commute and have grown faster.

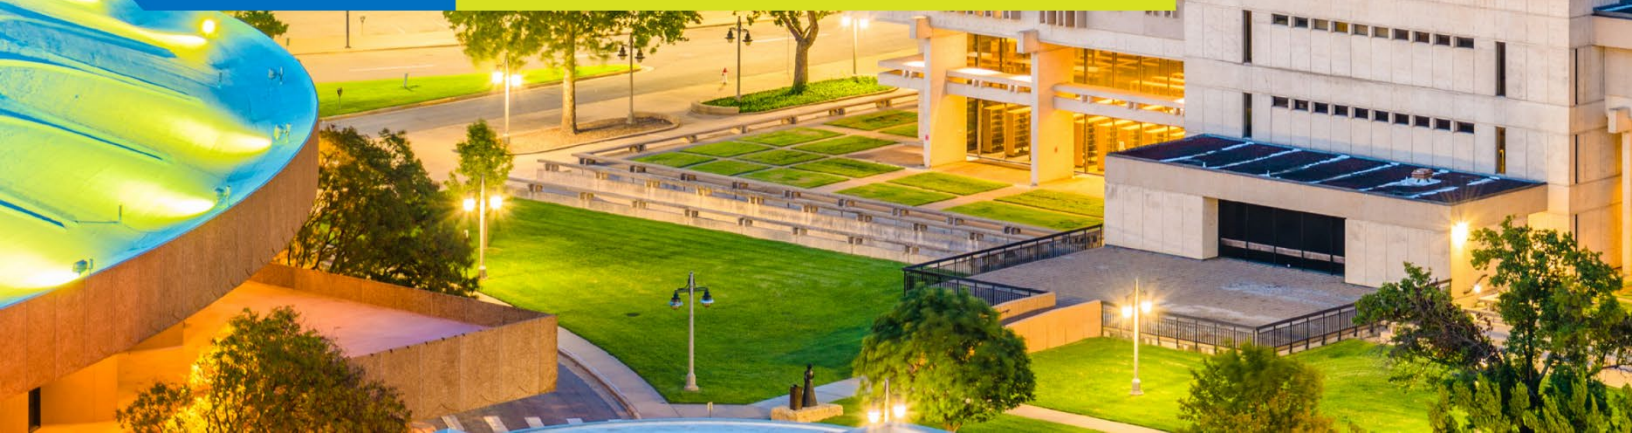
WAMPO Region Housing Report

DRAFT

March 2023



Demographics and trends

Demographics and trends within a local community provide a window into the characteristics of the population and its subsequent housing needs. In 2017, the population of the WAMPO region was 478,107, according to data from the Census American Community Survey. In 2021, the population rose to 493,889, an increase of 3.3%. This was outpaced by the growth of Kansas, which was 11% over the same time period. As of 2021, Wichita accounted for 73% of the population of the WAMPO area, a decrease of 2 percentage points from 2017.

Just over half of the population (51%) was in the age cohort from 25-65 years old, which is considered the prime working age. Those over 65 accounted for 15% of the population. Adding the prime age and senior population cohorts together accounts for the core population target market for the WAMPO region. The percentage of children varies across the region, from 9% in Viola to 38% in Garden Plain. Adults comprise most of the population in all communities, ranging from 47% in Valley Center to 65% in Park City. Seniors make up a smaller proportion of the population, with percentages ranging from 8% in Andale to 40% in Viola. Overall, the data shows that the age distribution varies across different communities in Kansas, with some communities having a higher proportion of children or seniors compared to others.

Overall, most of the communities experienced an increase in median personal income from 2017 to 2021, with a few exceptions. The median income for the United States and Kansas also increased during this time period. Looking at the individual communities, Maize had the most significant increase in median income, with a 40.1% increase from $28,822 in 2017 to $40,383 in 2021, which is from a shift in the composition of households. Mount Hope also experienced a significant increase in median income, with a 43.7% increase from $25,450 in 2017 to $36,719. On the other hand, Bel Aire and Bentley had decreases of close to 3%. Viola is missing data for 2021, so it is unclear whether median income increased or decreased.

In terms of the percentage change, Sedgwick had the largest increase in median income, with a 47.1% increase from $25,806 in 2017 to $37,962 in 2021, followed by Mount Hope and Maize. It is worth noting that some communities had a relatively small change in median income, such as Mulvane and Kechi, which saw increases of 2.29% and 6.46%, respectively. Comparing the median income of Kansas with the United States, we can see that the median income in Kansas is slightly lower than the national median income in both 2017 and 2021. However, both Kansas and the United States experienced a similar percentage increase in median income from 2017 to 2021 (17.3% and 19.6%, respectively).

DRAFT

Population by Age

	Children (1-18)		Adults (19-64)		Seniors (65+)

Poverty is another important consideration when researching housing trends, as it directly affects the ability of households to afford adequate housing. High poverty rates often mean that residents have lower incomes and are not able to afford adequate housing. From 2017 to 2021, the percentage of individuals in the WAMPO region below the poverty level decreased by 2% from 15% to 13%. The communities with the highest poverty rates in 2021 were Cheney and Garden Plain, both with rates of 16%. Meanwhile, the city of Wichita had a 2021 poverty rate of 15%, with a nominal value of 58,271 individuals below the poverty level.

DRAFT

Rental affordability

Gross rent as a percentage of household income is essential to housing affordability. Many communities saw increases in the share of households spending more than 30% of their income on rent. This is an important indicator, as households spending more than 30% of income is considered "cost burdened" and shows signs of affordability risk. Viola saw an 84% increase in the number of households spending 35% or more on income, which is likely skewed due to a low population and sample size. Meanwhile, larger communities such as Mulvane and Garden Plain currently have around half of their populations spending more than 35% of their income on gross rent.

Median rents increased in most communities in the WAMPO region from 2017 to 2021. The only two communities to see declines in median rent over this time period were Colwich and Haysville, whose rents decreased by 4%. Mulvane and Kechi both had the highest increases of 37%. The national median rent increase was 18%, with the value in 2021 rising to $1,163. The median rent in Kansas in 2021 was $912.

DRAFT

Relative to the statewide Median Rent % Change, several communities saw inflation at a rate higher than the state average. Kechi had the highest increase in rent at 24%, while Haysville and Colwich saw 18% decreases in rent. Regarding the overall affordability of these units, extra consideration could be used to analyze the supply mix of the available dwellings. The nominal value for the statewide Median Rent % Change was $111.

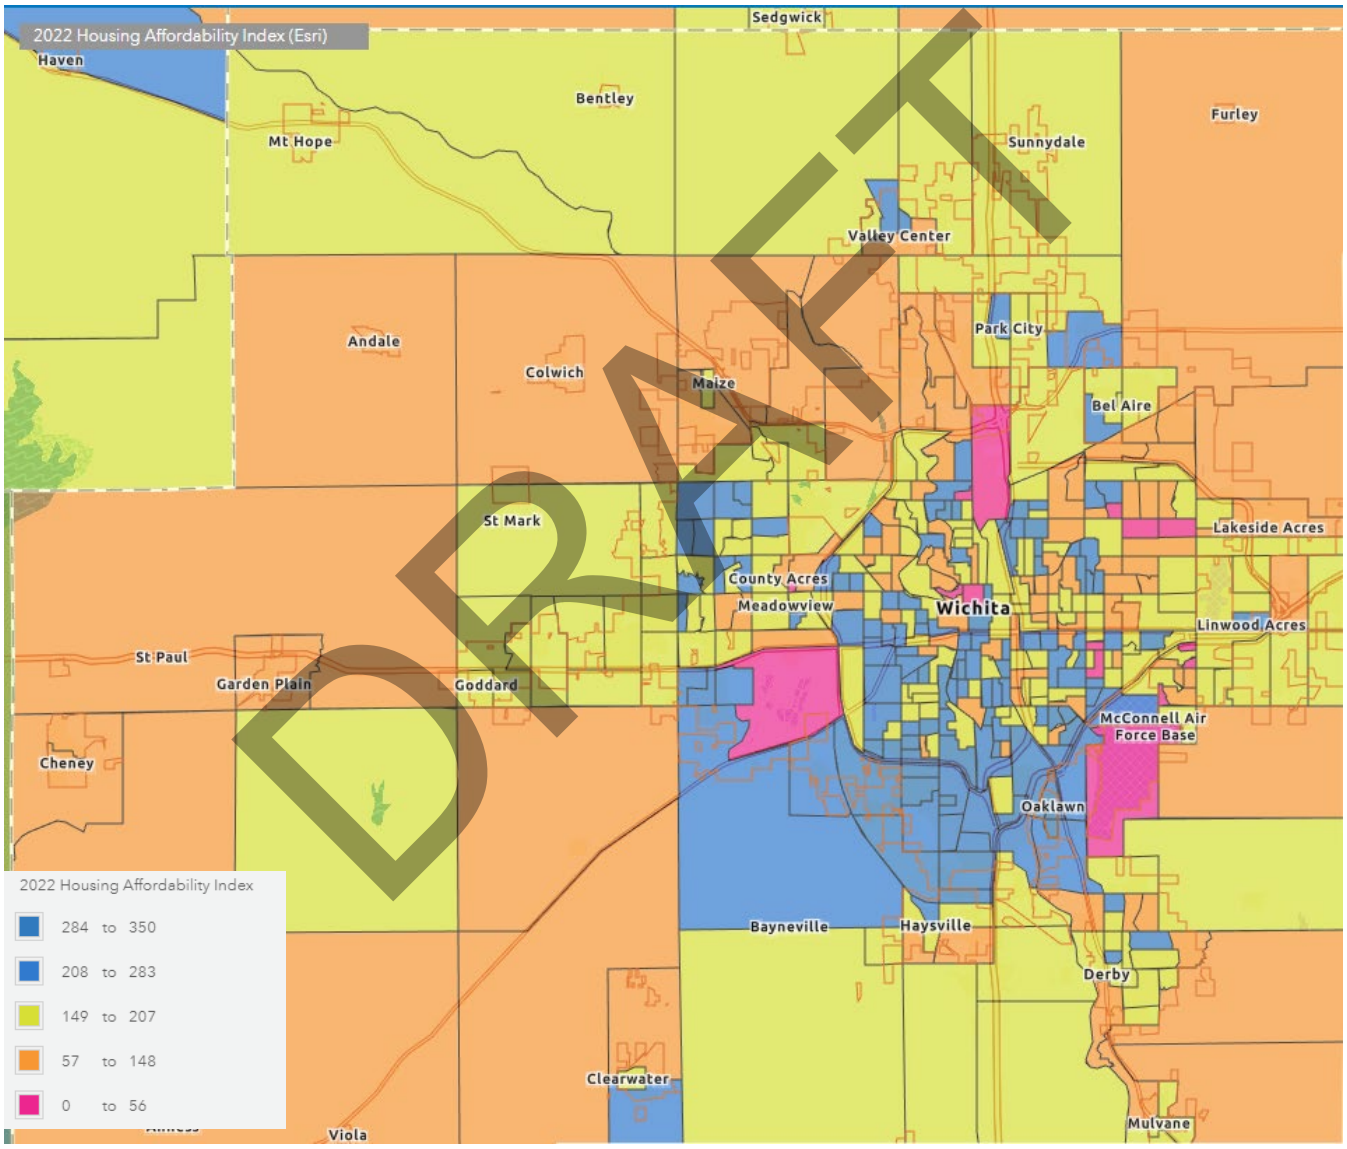
DRAFT

Homeownership affordability

The Housing Affordability Index demonstrates how easily a person with the median income for an area can purchase a mortgage. Per the National Association of Realtors, a "Value of 100 means that a family with the median income has exactly enough income to qualify for a mortgage on a median-priced home. An index above 100 signifies that family earning the median income has more than enough income to qualify for a mortgage loan on a median-priced home, assuming a 20 percent down payment. This index is calculated for fixed mortgages."

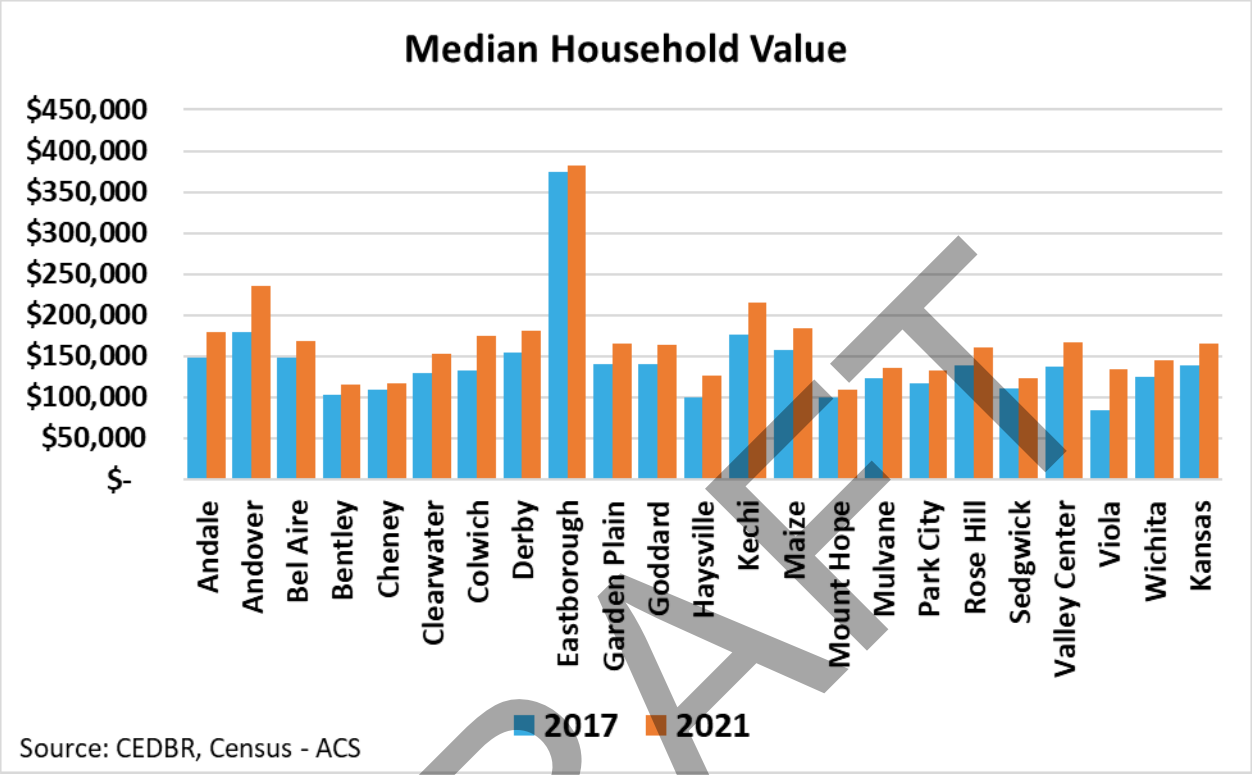


DRAFT

Source: CEDBR, ESRI

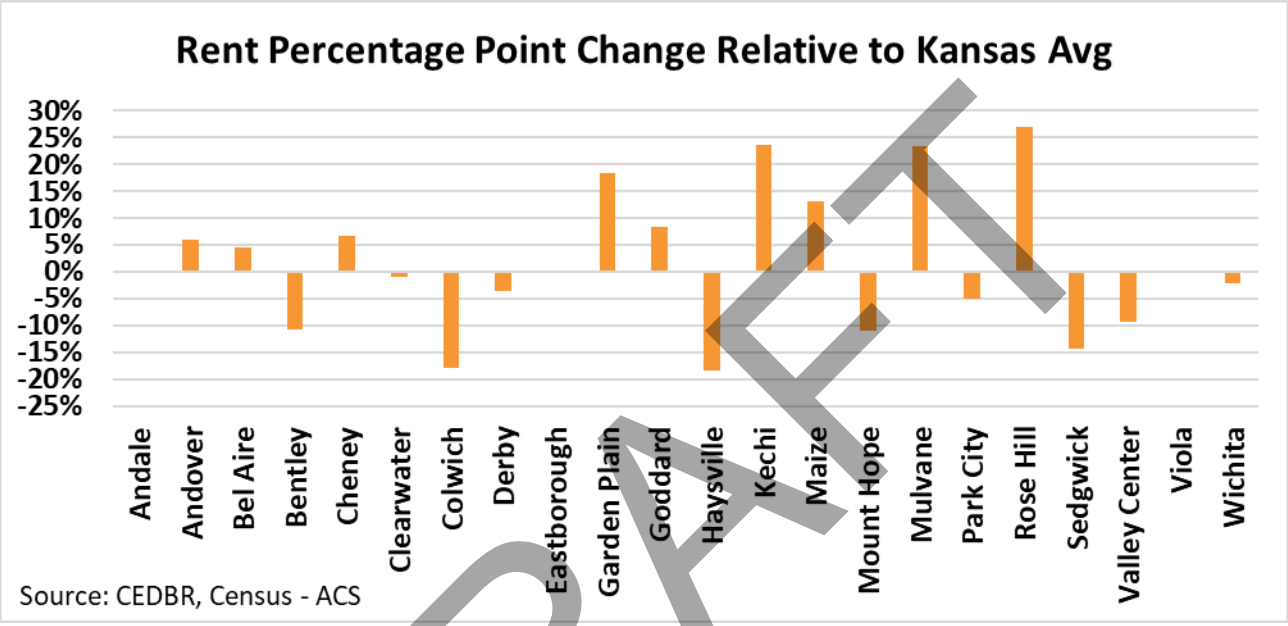
The median value of households grew in every WAMPO community from 2017 to 2021. Kansas saw the median home price increase by 18% on a statewide basis during this period, which was less than the national growth of

27%. The nominal value of median homes in the state of Kansas was $139,200 in 2017, which increased to $164,800.



DRAFT

Relative to the statewide Median Household Value Growth, only 7 of the WAMPO municipalities saw an increase at a rate above the average. Viola saw the highest percentage of growth, while Cheney saw the highest rate of decline. Overall, the growth rate statewide from 2017-2021 was 18%, while the national growth over the same time period was 27%. The only two communities with a growth rate higher than the national average were Colwich (39%) and Viola (57%).



DRAFT

Housing stock characteristics

The mix of housing by unit is diverse in the WAMPO region, depending upon the municipality. The differences are more apparent when comparing the 2021 mixes of Maize, Garden Plain, and Wichita. Garden Plain was primarily comprised of 1-unit detached homes, which accounted for 97% of housing units, with no supply of complexes that contained more than four units. Meanwhile, Wichita and Maize had mixes of housing complexes with varying sizes. Maize had the smallest portion of 1-unit detached dwellings, with this segment only comprising 48% of the market. The category with the most units throughout the WAMPO region overall was 1-unit detached dwellings.

Housing Units by Structure

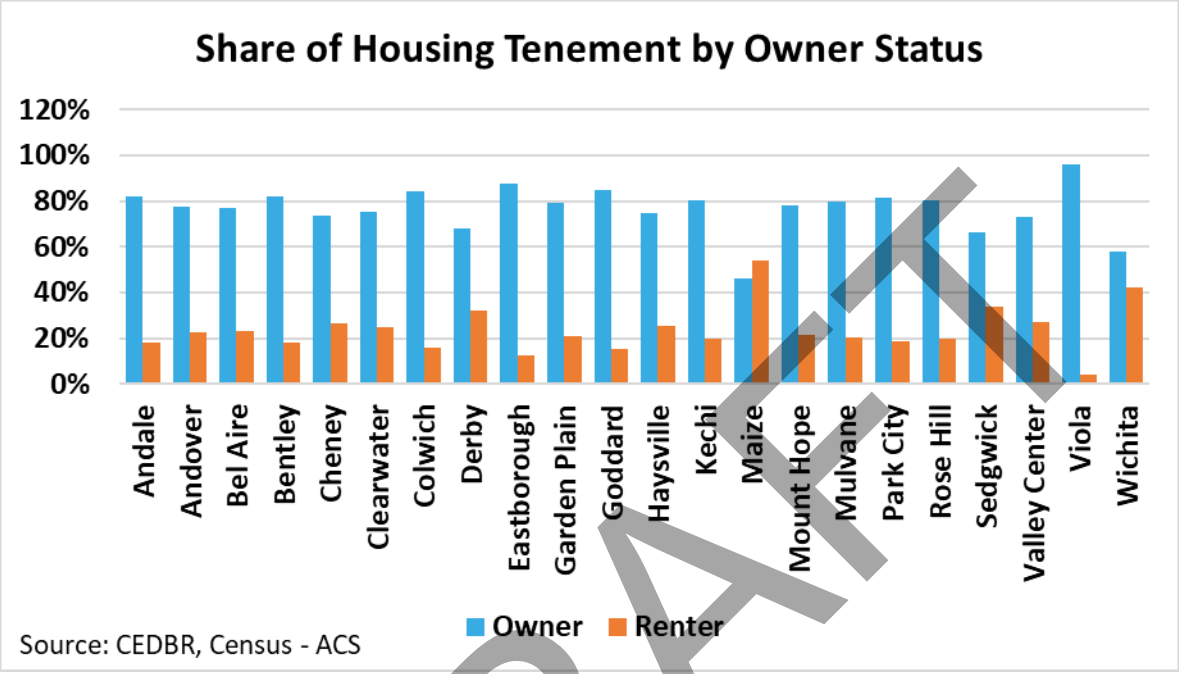
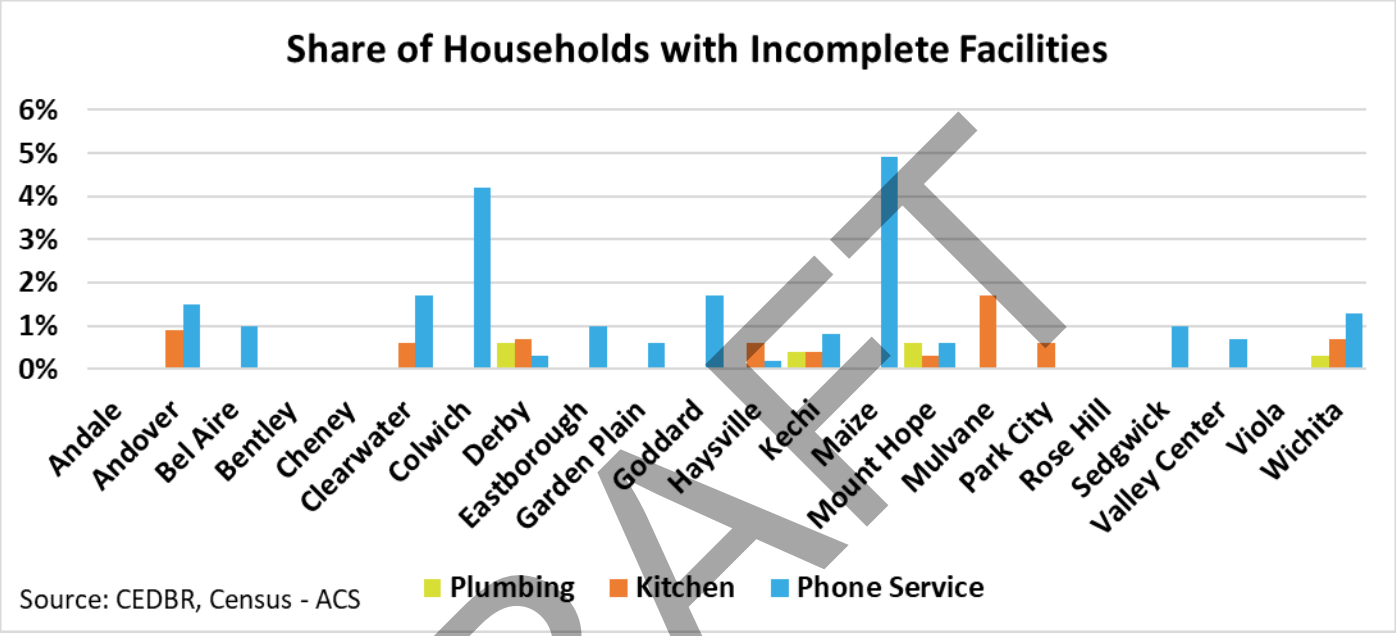
DRAFT

Tenancy status is a component of housing stock affected by housing affordability. Of the housing that was occupied in 2021, 39% was occupied by renters while owners occupied 61%. The nominal value of unoccupied housing units was 20,432 units compared to the 214,080 units in the market. Of the total housing supply, 55% was occupied by homeowners, while renters occupied 35%.



DRAFT

Completion of facilities is an important consideration when evaluating the overall quality of housing stock. Maize and Colwich had a larger-than-average portion of houses without phone service. Meanwhile, Mulvane has the highest percentage of homes with incomplete kitchens. No community had more than 1% of its houses with unfinished plumbing for occupied units.



DRAFT

Construction year is important when evaluating housing stock, as it can be an indicator of supply churn as houses grow in age. Communities like Andale, Bentley, Mount Hope, and Sedgwick contain an older supply stock, as over 40% of the housing units in the market were constructed before 1959. Meanwhile, Andover, Goddard, and Maize have a newer housing stock, with over 50% of their housing supply being constructed in 2000 or later.

Community	Housing by Construction Year				
	Total Housing Units	Built 2000 or later	Built 1980-1999	Built 1960-1979	Built Before 1959

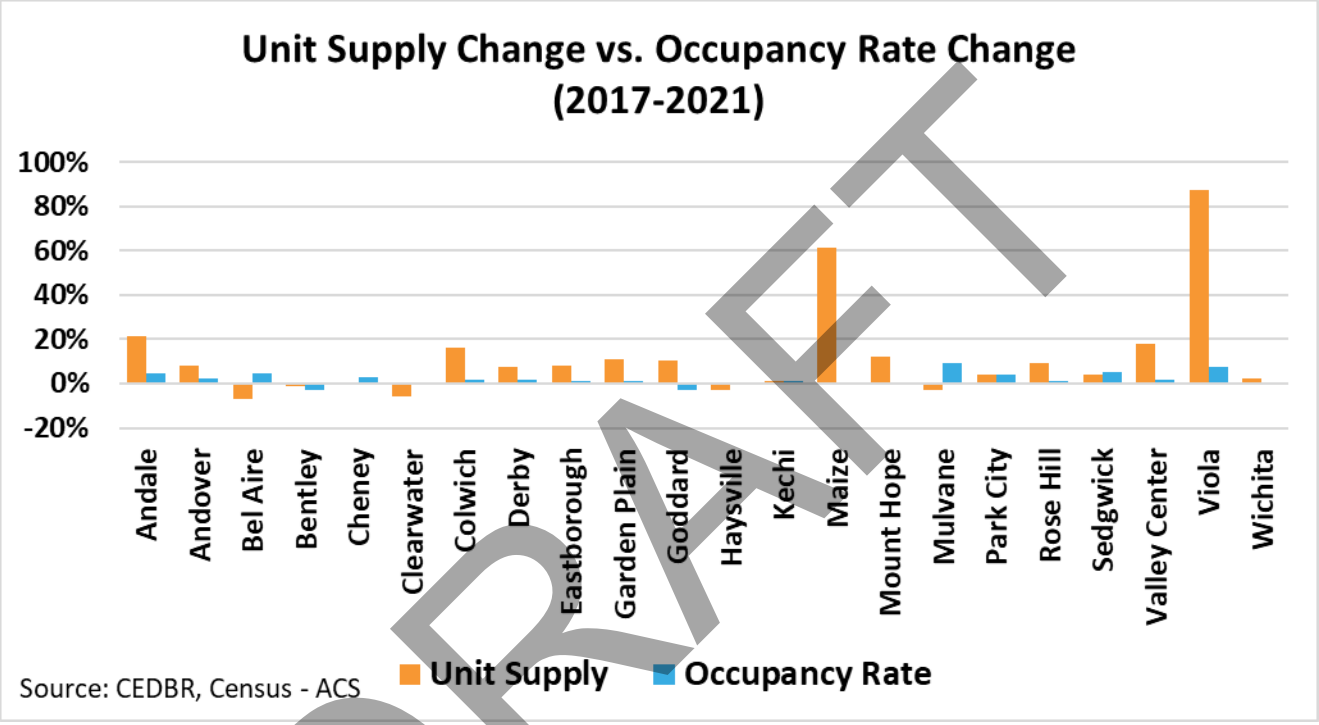
DRAFT

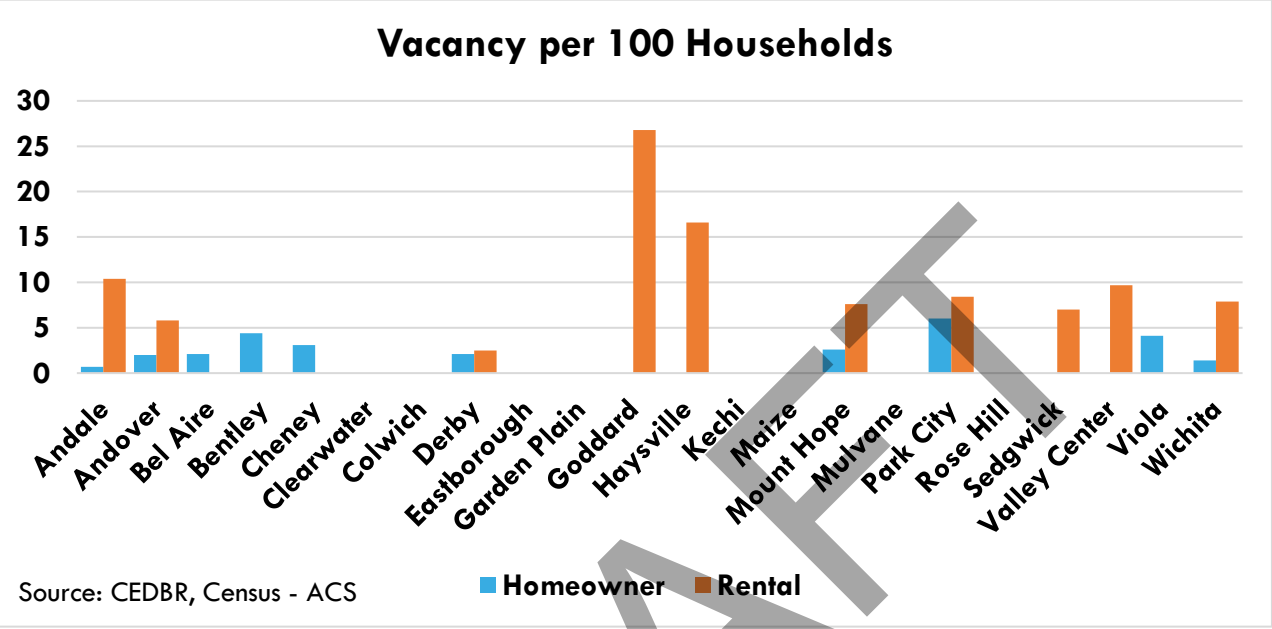
Alignment of housing supply and demand

Including both rented and owner-occupied units, most of the municipalities in the WAMPO area have seen increases in their housing supply along with increases in their rates of occupancy. For example, Garden Plain saw an increase in housing supply from 2017 -2021 of 11.2% while seeing an increase in occupancy of 1.4%. Simultaneously, Maize maintained a consistent occupancy rate despite increasing its housing unit supply by 61.5%. Conversely, Bel Aire's rate of occupancy increased by 4.6% despite a decrease of 7.0% in its housing supply.



DRAFT

Analyzing both rental and homeowner vacancies can add context to housing trends, as it can demonstrate where dwelling mix may not necessarily reflect household demand. Goddard and Haysville had the highest overall vacancy rates for rental properties in 2021.



Source: CEDBR, Census - ACS

DRAFT

On the supply side, housing units have increased by 3.1% in the WAMPO region from 207,592 (2017) to 214,080 (2021). The city of Wichita accounted for most of this increase, with 3,927 new housing units (over 61% of the new supply). Bel Aire had the most significant decrease over this time period, losing 210 housing units (7% of its 2017 supply). However, Bel Aire only increased its occupancy by 4.6%, which approximates the supply and demand more closely.

Total Housing Units

DRAFT

Transportation Impact

Housing affordability can have a significant impact on transportation needs and city planning and development. When housing is not affordable, people may be forced to live far away from their place of work or other necessary amenities, which can result in longer commute times and increased transportation costs. This can also lead to more traffic congestion and air pollution, as people may have to rely on personal vehicles to travel long distances.

These issues can be addressed by promoting the development of affordable housing in areas that are well-connected to transportation networks. This can include building new housing developments near public transit hubs, creating bike lanes and pedestrian-friendly streets, and improving public transit options such as buses, trains, and subways.

By promoting affordable housing and improving transportation infrastructure, cities can create more sustainable and livable communities for their residents. The cost of housing and transportation are often the two largest expenses for households. If housing is in an area with good access to transportation options, such as public transit, biking, or walking, households may be able to save money on transportation costs. Additionally, when taking parking into consideration, improvements to public parking infrastructure can reduce the need to include parking infrastructure into housing development costs. On the other hand, if housing is in an area with limited transportation options, households may need to spend more on cars, gas, and maintenance. Therefore, public investment and infrastructure, such as roads, bridges, and public transit, can affect housing and transportation costs.

In addition, efforts can be made to ensure that affordable housing is available in areas that offer access to necessary amenities, such as grocery stores, schools, and healthcare facilities. Overall, the relationship between housing affordability and transportation needs is an important consideration for city planning and development.

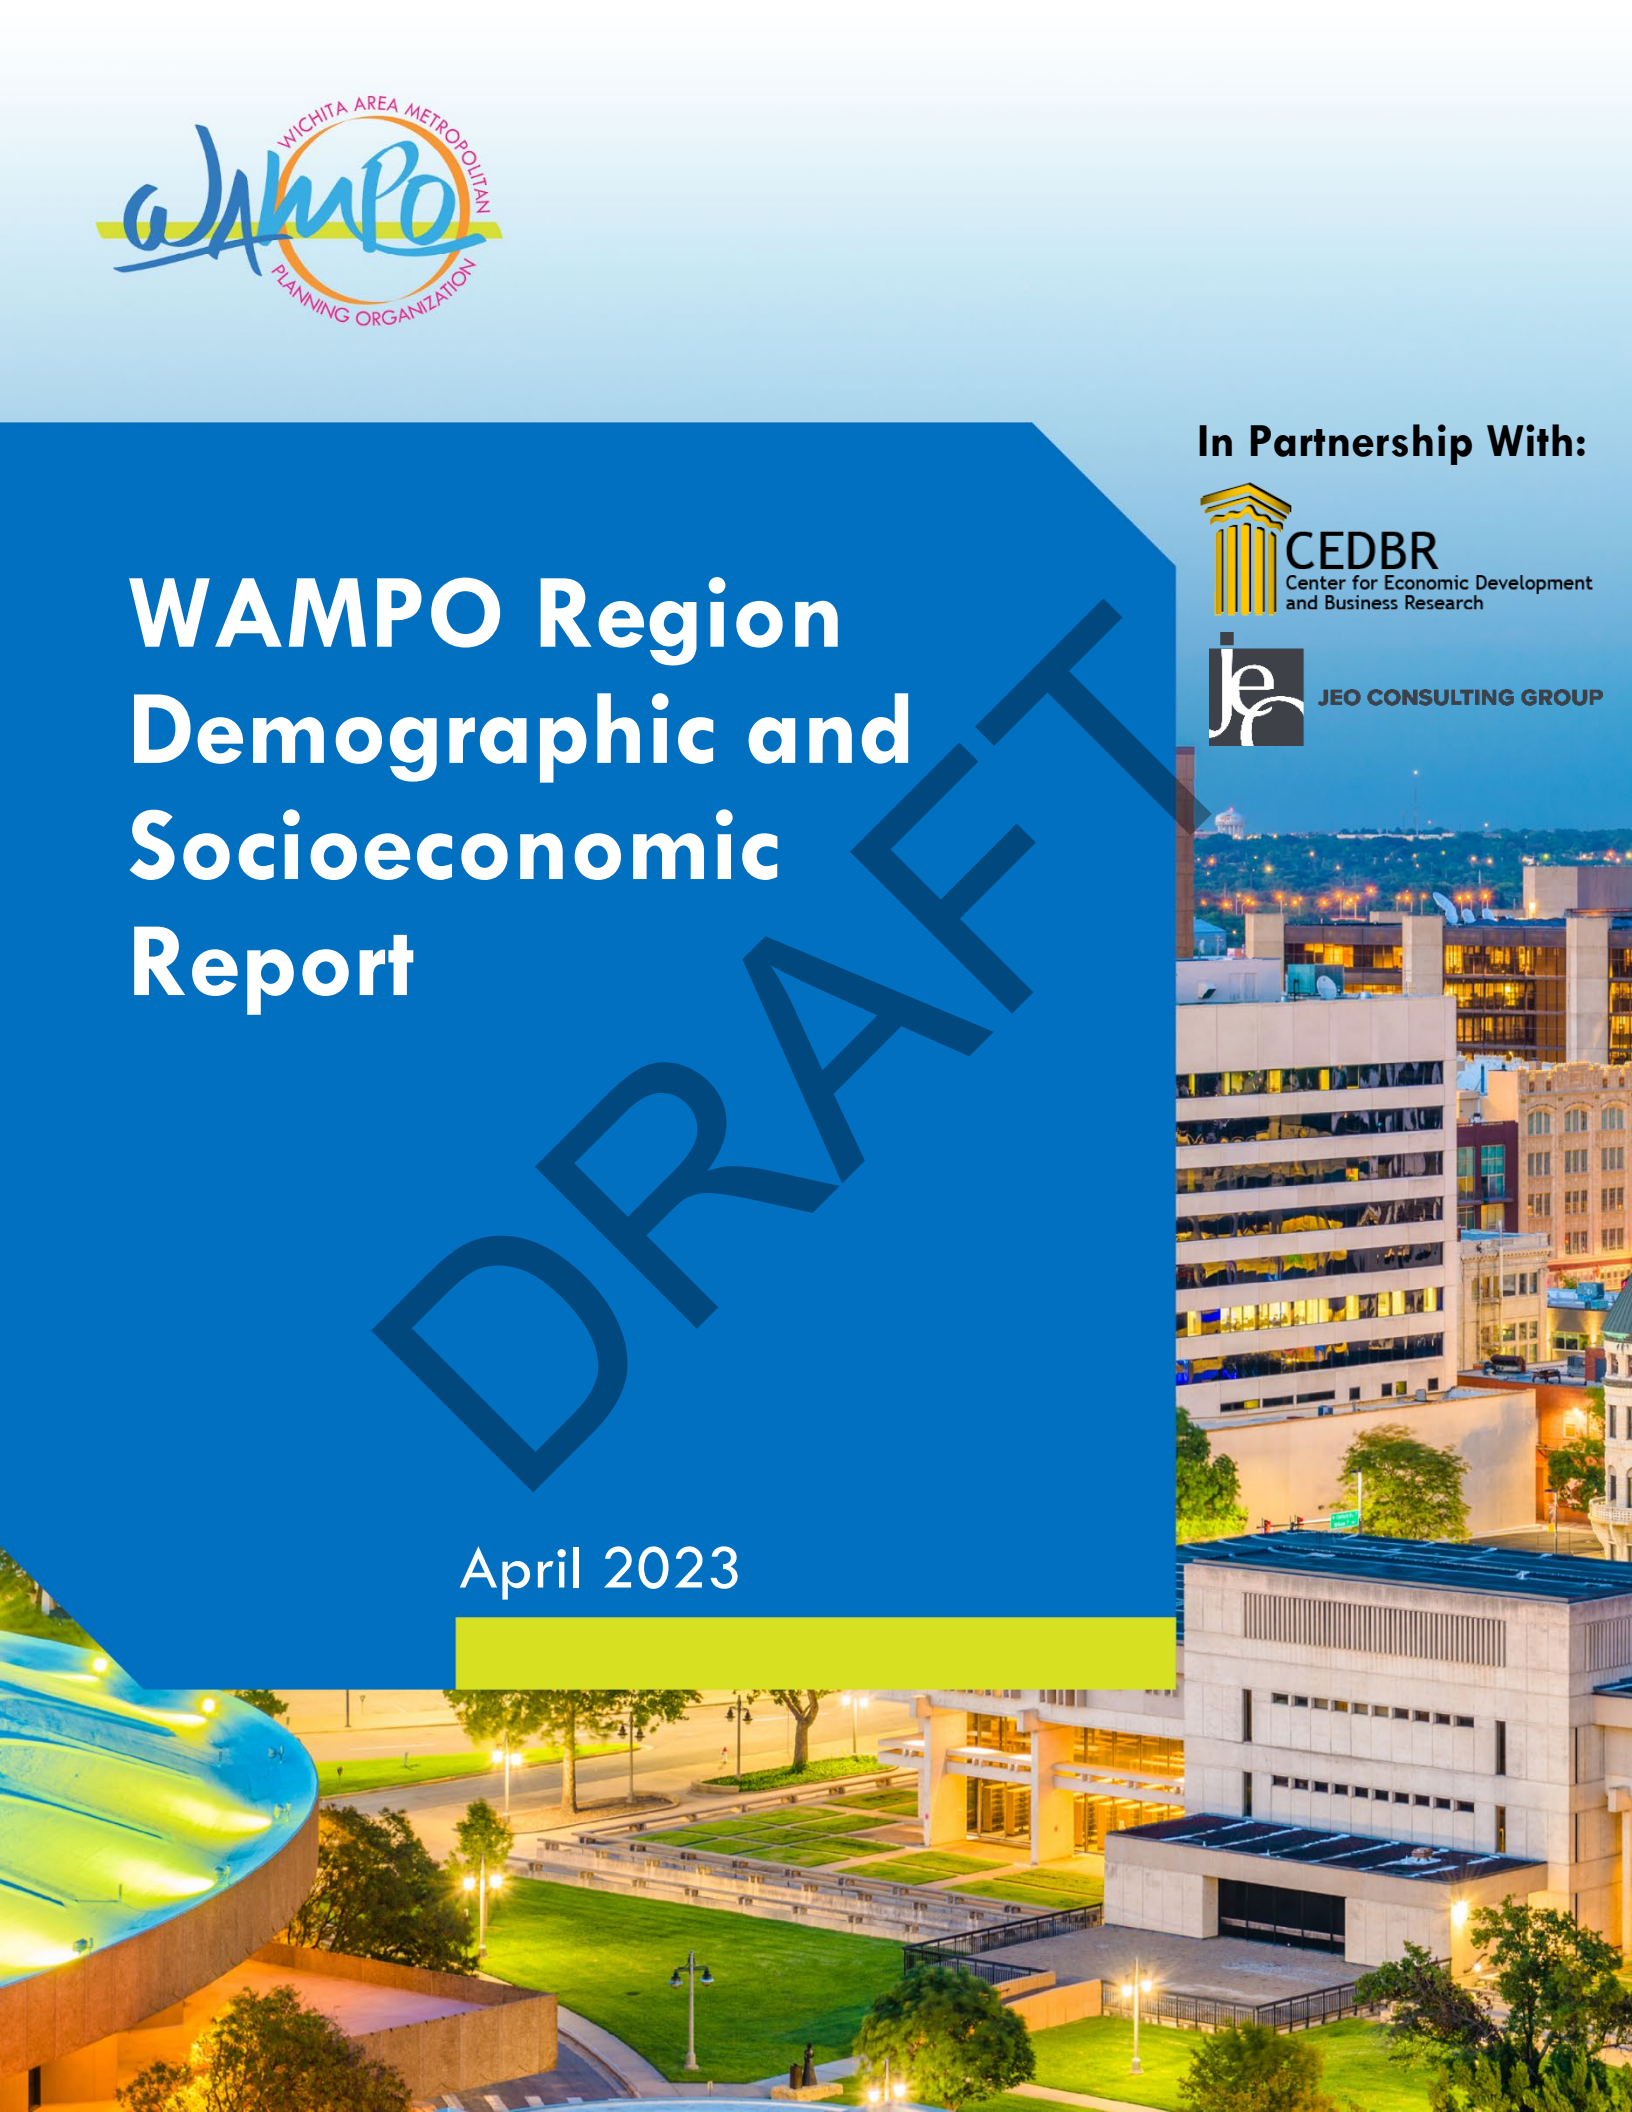
WAMPO Region Demographic and Socioeconomic Report

DRAFT

April 2023



There are an extensive number of demographic and socioeconomic variables available for the WAMPO region. To make the information more accessible and valuable to regional stakeholders, this report will provide a highlighted summary of the aggregated region and then showcase the data in infographics and tables. The following is an outline of the report structure:

- Tapestry Segmentation – The segmentation classifies households into fourteen categories predesignated to specific consumer preferences and lifestyles. The tapestries are built from consumer spending and socioeconomic data and help characterize the communities into distinct groups of behaviors. Specific descriptions of these grouping can be downloaded using the following link;

https://doc.arcgis.com/en/esri-demographics/latest/regional-data/tapestry-segmentation.htm#GUID-423D9E4C-1C73-4039-82A9-29713A9D9DB9

- Dominant Tapestry Map - This overlays the various tapestry segmentations by Census Tract, demonstrating the diversity across the region.
- Diversity Index Map - This segments the Census Tracts and assigns each a diversity index for the population within the area.
- Demographic and income comparison profile – The profiles contain demographics of each region, breaking out sections of the population by income, age, sex, and race.
- Age by sex by race profile – The report combines the variables of age, sex, and race to provide a more specific cross-section of the region's constituents.

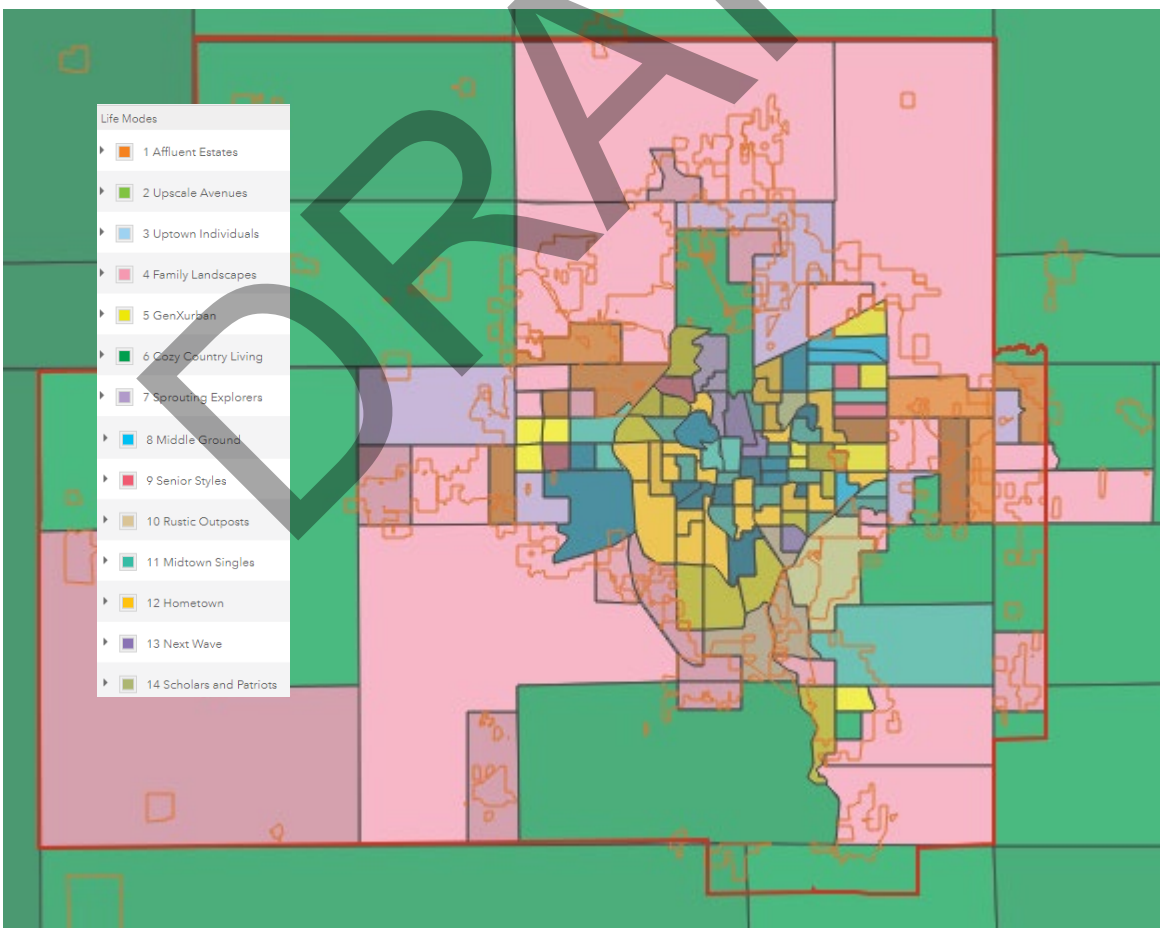
Dominant Tapestry Map

The Tapestry Segmentation is a tool developed by ESRI, a leading Geographic Information System (GIS) software company, to classify and analyze US residential areas based on demographic and lifestyle characteristics.

The segmentation groups similar neighborhoods together based on over 100 demographic variables such as age, income, education, and employment, as well as lifestyle attributes such as leisure activities, shopping habits, and media preferences. By using Tapestry Segmentation, organizations can gain insights into local populations' needs, preferences, and behaviors.

The dominant tapestries within the WAMPO region were Family Landscapes and Cozy Country Living. Family Landscapes households are successful young families in their first homes, own SUVs, eat out frequently, and are engaged in activities like bowling, golf, and video games. In contrast, Cozy Country Living households are empty nesters living in single-family dwellings, own lots of tools for their lawns and gardens, and listen to country music. The closer to the city center, the larger the lifestyle diversity. Even more proximal suburbs, such as Maize and Derby, exhibit different tapestry segments.

DRAFT



Diversity Index Map

Regional racial and ethnic diversity is essential to consider in transportation planning. Diverse communities attract a wider range of businesses, increase innovation, and improve health outcomes. The following diversity index is based on a scale of 100, with 100 being the most diverse. The map displays the diversity by Census Tract and shows that suburban areas are less diverse than the city center. However, the enclave of Eastborough demonstrates a low diversity index compared to its surrounding areas.
